Paediatric regulatory details

Is trial part of an agreed paediatric investigation plan (PIP)	No
Does article 45 of REGULATION (EC) No 1901/2006 apply to this trial?	No
Does article 46 of REGULATION (EC) No 1901/2006 apply to this trial?	No

Notes:

Results analysis stage

Analysis stage	Final
Date of interim/final analysis	06 October 2020
Is this the analysis of the primary completion data?	No
Global end of trial reached?	Yes
Global end of trial date	06 October 2020
Was the trial ended prematurely?	Yes

Notes:

General information about the trial

Main objective of the trial:

The primary objective of this study was to evaluate the efficacy of ontamalimab in inducing remission, based on composite score of subject reported symptoms and centrally read endoscopy, in subjects with moderate to severe Ulcerative Colitis (UC).

Protection of trial subjects:

This study was conducted in accordance with International Council for Harmonisation (ICH) Good Clinical Practice (GCP) Guideline E6 (1996), the principles of the Declaration of Helsinki, as well as other applicable local ethical and legal requirements.

Background therapy: -

Evidence for comparator: -

Actual start date of recruitment	05 December 2017
Long term follow-up planned	Yes
Long term follow-up rationale	Safety
Long term follow-up duration	4 Months
Independent data monitoring committee (IDMC) involvement?	Yes

Notes:

Population of trial subjects

Subjects enrolled per country

Country: Number of subjects enrolled	Argentina: 1
Country: Number of subjects enrolled	Belgium: 3
Country: Number of subjects enrolled	Bosnia and Herzegovina: 2
Country: Number of subjects enrolled	Bulgaria: 24
Country: Number of subjects enrolled	Canada: 4
Country: Number of subjects enrolled	Colombia: 6
Country: Number of subjects enrolled	Estonia: 1
Country: Number of subjects enrolled	Greece: 1
Country: Number of subjects enrolled	Hungary: 28
Country: Number of subjects enrolled	Ireland: 1
Country: Number of subjects enrolled	Japan: 16
Country: Number of subjects enrolled	Korea, Republic of: 17
Country: Number of subjects enrolled	Lebanon: 1
Country: Number of subjects enrolled	Mexico: 14
Country: Number of subjects enrolled	New Zealand: 3

Country: Number of subjects enrolled	Spain: 5
Country: Number of subjects enrolled	Switzerland: 1
Country: Number of subjects enrolled	Ukraine: 77
Country: Number of subjects enrolled	United States: 51
Worldwide total number of subjects	279
EEA total number of subjects	86

Notes:

Subjects enrolled per age group

In utero	0
Preterm newborn - gestational age < 37 wk	0
Newborns (0-27 days)	0
Infants and toddlers (28 days-23 months)	0
Children (2-11 years)	0
Adolescents (12-17 years)	1
Adults (18-64 years)	258
From 65 to 84 years	20
85 years and over	0

Subject disposition

Recruitment

Recruitment details:

The study was conducted at 205 sites between 5 December 2017 (first subject first visit) and 06 October 2020 (last subject last visit).

Pre-assignment

Screening details:

A total of 279 subjects were enrolled and randomized in this study.

Period 1

Period 1 title	Overall Study (overall period)
Is this the baseline period?	Yes
Allocation method	Randomised - controlled
Blinding used	Double blind
Roles blinded	Subject, Investigator

Arms

Are arms mutually exclusive?	Yes
Arm title	Placebo

Arm description:

Subjects received placebo matched to ontamalimab subcutaneous (SC) injection, using a prefilled syringe (PFS) on Week 0, Week 4, and Week 8 in a 12-week treatment period.

Arm type	Placebo
Investigational medicinal product name	Placebo
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Solution for injection
Routes of administration	Subcutaneous use

Dosage and administration details:

Subjects received placebo matched to ontamalimab SC injection, using a PFS.

Arm title	Ontamalimab 25 mg
------------------	-------------------

Arm description:

Subjects received 25 milligrams (mg) of ontamalimab SC injection, using a PFS on Week 0, Week 4 and Week 8 in a 12-week treatment period.

Arm type	Experimental
Investigational medicinal product name	Ontamalimab
Investigational medicinal product code	SHP647
Other name	
Pharmaceutical forms	Solution for injection
Routes of administration	Subcutaneous use

Dosage and administration details:

Subjects received 25 mg of ontamalimab SC injection, using a PFS.

Arm title	Ontamalimab 75 mg
------------------	-------------------

Arm description:

Subjects received 75 mg of ontamalimab SC injection, using a PFS on Week 0, Week 4 and Week 8 in a 12-week treatment period.

Arm type	Experimental

Primary: Number of Subjects With Remission Based on Composite Score at Week 12

End point title	Number of Subjects With Remission Based on Composite Score at Week 12
End point description: Remission was defined as a composite score of patient-reported symptoms using daily e-diary and centrally read endoscopy as stool frequency sub-score of 0 or 1 with at least a 1-point change from baseline, rectal bleeding sub-score of 0 and endoscopic sub-score of 0 or 1 (modified, excluded friability). The composite score was a recommended measure derived from the Mayo score without the physician global assessment (PGA) sub-score and ranged from 0 to 9 points. The Mayo score was a measure of Ulcerative Colitis (UC) disease activity. It ranged from 0 to 12 points and consisted of 4 sub-scores, each graded from 0 to 3 with higher scores indicating more severe disease. The sub-scores were stool frequency (0-3); rectal bleeding (0-3); findings of endoscopy (0-3); physician global assessment (0-3). Full analysis set (FAS) consisted of all subjects in the randomized set who had received at least 1 dose of investigational product (IP).

Secondary: Number of Subjects With Clinical Response Based on Composite Score at Week 12

End point title	Number of Subjects With Clinical Response Based on Composite Score at Week 12
-----------------	---

End point description:

Clinical response based on composite score was defined as a decrease from baseline in the composite score of patient-reported symptoms using daily e-diary and centrally read endoscopy of at least 2 points and at least 30 percent (%), with an accompanying decrease in the sub-score for rectal bleeding greater than or equal to (\geq) 1 point or a sub-score for rectal bleeding less than or equal to (\leq) 1. The composite score was a recommended measure derived from the Mayo score without the PGA sub-score and ranged from 0 to 9 points. The Mayo score was a measure of UC disease activity. It ranged from 0 to 12 points and consisted of 4 sub-scores, each graded from 0 to 3 with higher scores indicating more severe disease. The sub-scores were stool frequency (0-3); rectal bleeding (0-3); findings of endoscopy (0-3); PGA (0-3). FAS consisted of all subjects in the randomized set who had received at least 1 dose of IP.

Secondary: Number of Subjects With Mucosal Healing Based on Endoscopic and Histological Assessment Using the Geboes Score Grading System at Week 12

End point title	Number of Subjects With Mucosal Healing Based on Endoscopic and Histological Assessment Using the Geboes Score Grading System at Week 12
-----------------	--

End point description:

Mucosal healing was defined by centrally read endoscopic sub-score 0 or 1 (modified, excluded friability) and centrally read Geboes score of ≤2. The centrally read endoscopic sub-score of Mayo score ranged from 0 to 3 with higher scores indicating more severe disease. Geboes score grading system, was a validated score for evaluating histologic disease activity in UC as follows: grade 0 equal to (=) structural and architectural changes; grade 1 = chronic inflammatory infiltrate; grade 2 = lamina propria neutrophils and eosinophils; grade 3 = neutrophils in the epithelium; grade 4 = crypt destruction; grade 5 = erosions or ulceration. A higher Geboes score indicating more severe disease. Number of subjects with mucosal healing based on endoscopic and histological assessment using the Geboes score grading system were reported. FAS consisted of all subjects in the randomized set who had received at least 1 dose of IP.

Secondary: Change From Baseline in Average Worst Abdominal Pain Score Based on Patient Reported Outcome-ulcerative Colitis (PRO-UC) Daily e-Diary at Week 12

End point title	Change From Baseline in Average Worst Abdominal Pain Score Based on Patient Reported Outcome-ulcerative Colitis (PRO-UC) Daily e-Diary at Week 12
-----------------	---

End point description:

PRO-UC signs and symptom data were collected using a daily e-diary during treatment period. Collection of daily e-diary data was begun at least 10 days before the baseline visit. Subjects asked to record data of abdominal pain worst severity, over previous 24 hours, in the e-diary. Subjects signs and symptom average scores at each scheduled visit were calculated based on data recorded over most recent 3 days (consecutive or non-consecutive) of last 10 days prior to scheduled visit start date excluding following days: day of any bowel preparation, day of endoscopy, any days between day of bowel preparation and day of endoscopy and 2 days after day of endoscopy. Abdominal pain's worst severity assessment was based on 11-point numerical rating scale with 0-No pain and 10-Worst imaginable pain over the previous 24 hours. Higher scores indicating more severe pain. Analysis was performed using FAS. Here, number of subjects analysed signifies subjects who were evaluable for this endpoint.

More information

Substantial protocol amendments (globally)

Were there any global substantial amendments to the protocol? Yes

Date	Amendment
05 September 2018	Protocol Amendment 1: <ul style="list-style-type: none">- Updated exclusion criteria to further define the exclusion of subjects with colitis, a history of positive Mycobacterium tuberculosis (TB), or compromised liver function.- Updated exclusion criteria to indicate exclusion of subjects with prior nonbiologic treatment with immunomodulatory properties or prior apheresis or plasma exchange within the specified timeframe.- Added a new section to provide appropriate guidance on patients who have been enrolled with elevated liver function test (LFT) values or who experience an increase in LFT(s) during the study.
11 November 2019	Protocol Amendment 2: <ul style="list-style-type: none">- Updated text to reflect preliminary results of an ePPND toxicity study in nonhuman primates, which indicated that, at the dose levels tested (30 mg/kg and 60 mg/kg), infant losses were increased in ontamalimab-exposed animals when compared both to control animals in the study and to the historical control animal data from the testing facility. The relevance of this finding to humans was unknown but could not be excluded.- Added text to address FDA recommendation to evaluate the risk of hypersensitivity reactions in the Phase 3 studies and aid in the collection of relevant safety data.

Notes:

Interruptions (globally)

Were there any global interruptions to the trial? No

Limitations and caveats

Limitations of the trial such as small numbers of subjects analysed or technical problems leading to unreliable data.

The study was terminated as per the sponsor decision to discontinue the SHP647 (ontamalimab) clinical trial development program for inflammatory bowel diseases (IBD) early.

Notes:
