

Clinical trial results:

Pilot study, single-blind, candesartan versus usual care of peripheral neuropathy development induced by vincristine (PNIV) in patients treated for lymphoma B.

Summary

EudraCT number	2017-000585-30
Trial protocol	FR
Global end of trial date	23 September 2021

Results information

Result version number	v1 (current)
This version publication date	09 November 2023
First version publication date	09 November 2023

Notes:

Paediatric regulatory details

Is trial part of an agreed paediatric investigation plan (PIP)	No
Does article 45 of REGULATION (EC) No 1901/2006 apply to this trial?	No
Does article 46 of REGULATION (EC) No 1901/2006 apply to this trial?	No

Notes:

Results analysis stage

Analysis stage	Final
Date of interim/final analysis	13 October 2022
Is this the analysis of the primary completion data?	No
Global end of trial reached?	Yes
Global end of trial date	23 September 2021
Was the trial ended prematurely?	Yes

Notes:

General information about the trial

Main objective of the trial:

The main objective of the clinical study is:

Describing the impact of Candesartan on the occurrence of neuropathy as measured by variation in Total Clinical Neuropathy Score (TNSc) in patients treated for non-Hodgkin's lymphoma type B with multidrugine-containing chemotherapy, evaluating clinical signs Of neuropathy) between baseline (V1) and end of chemotherapy (V4).

Protection of trial subjects:

The trial was carried out in accordance with the regulation, the ICH and the Helsinki declaration. All patients have been informed and have given their consent.

Background therapy: -

Evidence for comparator: -

Actual start date of recruitment	02 October 2017
Long term follow-up planned	No
Independent data monitoring committee (IDMC) involvement?	No

Notes:

Population of trial subjects

Subjects enrolled per country

Country: Number of subjects enrolled	France: 9
Worldwide total number of subjects	9
EEA total number of subjects	9

Notes:

Subjects enrolled per age group

In utero	0
Preterm newborn - gestational age < 37 wk	0
Newborns (0-27 days)	0
Infants and toddlers (28 days-23 months)	0
Children (2-11 years)	0
Adolescents (12-17 years)	0
Adults (18-64 years)	6
From 65 to 84 years	3

85 years and over	0
-------------------	---

Subject disposition

Recruitment

Recruitment details:

The first inclusion took place on 29/05/2019 and the last on 27/05/2021.

The recruitment took place at the University Hospital of Limoges.

Pre-assignment

Screening details:

Patients with a diagnosis of lymphoma, are recruited in consultation or in hospitalization in the hematologic department

During this interview, the patient will be given information about the study and an information about the benefits and the side effects.

Period 1

Period 1 title	Overall trial (overall period)
Is this the baseline period?	Yes
Allocation method	Randomised - controlled
Blinding used	Single blind
Roles blinded	Assessor ^[1]

Blinding implementation details:

The patient is open-label and the primary endpoint is assessed by an investigator blinded to the randomization group.

Arms

Are arms mutually exclusive?	Yes
Arm title	CANDESARTAN

Arm description:

Candesartan (8mg) will then be prescribed and dispensed for a first intake the next day, in addition to the usual treatment (Neurological assessment and neurophysiological exploration).

A prescription is given to the patient for creatinine and kalemia measurement at home after 7 days of treatment.

Arm type	Experimental
Investigational medicinal product name	CANDESARTAN
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Tablet
Routes of administration	Oral use

Dosage and administration details:

8 to 16 mg/d daily for 15 weeks

Oral use

Arm title	Usual care
------------------	------------

Arm description:

Neurological assessment (EVA, TNSc, EQ-5D) and neurophysiological exploration (ENMG, Sudoscan)

Arm type	No intervention
----------	-----------------

No investigational medicinal product assigned in this arm

Notes:

[1] - The roles blinded appear inconsistent with a simple blinded trial.

Justification: The patient is open-label and the primary endpoint is assessed by an investigator blinded to the randomization group

Number of subjects in period 1	CANDESARTAN	Usual care
Started	4	5
Completed	4	5

Baseline characteristics

Reporting groups

Reporting group title

Overall trial

Reporting group description: -

Reporting group values	Overall trial	Total	
Number of subjects	9	9	
Age categorical			
Units: Subjects			
In utero	0	0	
Preterm newborn infants (gestational age < 37 wks)	0	0	
Newborns (0-27 days)	0	0	
Infants and toddlers (28 days-23 months)	0	0	
Children (2-11 years)	0	0	
Adolescents (12-17 years)	0	0	
Adults (18-64 years)	9	9	
From 65-84 years	0	0	
85 years and over	0	0	
Age continuous			
Units: years			
least squares mean	59		
standard deviation	± 9.1	-	
Gender categorical			
Units: Subjects			
Female	5	5	
Male	4	4	

End points

End points reporting groups

Reporting group title	CANDESARTAN
Reporting group description: Candesartan (8mg) will then be prescribed and dispensed for a first intake the next day, in addition to the usual treatment (Neurological assessment and neurophysiological exploration). A prescription is given to the patient for creatinine and kalemia measurement at home after 7 days of treatment.	
Reporting group title	Usual care
Reporting group description: Neurological assessment (EVA, TNSc,EQ-5D) and neurophysiological exploration (ENMG, Sudoscan)	

Primary: TNSc score variation

End point title	TNSc score variation ^[1]
End point description:	
End point type	Primary
End point timeframe: 19 weeks after the start of treatment	

Notes:

[1] - No statistical analyses have been specified for this primary end point. It is expected there is at least one statistical analysis for each primary end point.

Justification: Because of the small number of patients included, no results can be derived from the analysis .

Therefore, the statistical analysis performed on this small number of included subjects is purely descriptive.

End point values	CANDESARTAN	Usual care		
Subject group type	Reporting group	Reporting group		
Number of subjects analysed	3	3		
Units: Score variation				
arithmetic mean (standard error)	3 (± 1)	5.7 (± 2.1)		

Statistical analyses

No statistical analyses for this end point

Adverse events

Adverse events information

Timeframe for reporting adverse events:

From the signing of the consent up to 1 month after the end of the treatment

Assessment type	Systematic

occurrences (all)	0	1	

More information

Substantial protocol amendments (globally)

Were there any global substantial amendments to the protocol? Yes

Date	Amendment
11 February 2020	<p>1- Change in non-inclusion criteria:</p> <ul style="list-style-type: none">- Delete "diabetes"- Delete "known previous vitamin deficiency"- Delete "patient on anticoagulant or with known blood clotting disorder". <p>2- Extension of candesartan duration treatment beyond V4 to cover toxicity from last chemotherapy</p>

Notes:

Interruptions (globally)

Were there any global interruptions to the trial? Yes

Date	Interruption	Restart date
23 September 2021	<p>Reasons for Permanent Discontinuation:</p> <ul style="list-style-type: none">-Low accrual rate: 28 months after the enrollment of the first patient, only 9 patients were recruited out of the 40 planned , despite an extension of the inclusion period and modification of the inclusion and non-inclusion criteria.-Overestimation of the inclusion potential <p>Given the very small number of patients, no benefit / risk analysis can be performed.</p> <p>However a full safety analysis is performed as well as a descriptive analysis.</p>	-

Notes:

Limitations and caveats

Limitations of the trial such as small numbers of subjects analysed or technical problems leading to unreliable data.

Early termination leading to a small number of subjects analysed;
The few data collected does not allow any analysis.

Notes:
