## General information about the trial

Main objective of the trial:

The primary objective of the study is to determine the safety profile of CX-2009, the maximum tolerated dose (MTD) / Recommended Phase 2 Dose (RP2D), and the dose-limiting toxicities (DLTs) of CX-2009, when administered intravenously (IV) every 21 days as monotherapy to subjects with selected advanced or recurrent solid tumors.

Protection of trial subjects:

This study was conducted in full accordance with the World Medical Association Declaration of Helsinki concerning written informed consent and the protection of rights of human subjects. The investigators agreed to comply with Food and Drug Administration (FDA) Regulations, IRB/IEC Regulations and International Council of Harmonisation (ICH) Guidelines for Good Clinical Practices (GCP).

## Subject disposition

### Recruitment

Recruitment details:

The study was conducted in 4 parts (Part A, Part A2, Part B, and Part C1). Enrolled patients continued on study through the follow-up period. Each study part consisted of 3 periods: a 30-day screening, a treatment period, and a follow-up period.

### Pre-assignment

Screening details:

As of 09/April/2020, 99 patients had been enrolled and treated in the study (47 in Part A, 39 in Part A2, 3 in Part B, and 10 in Part C1); enrolled patients continued on study through the follow-up period. The study was terminated early after these subjects were enrolled.

End point title	The Number of Subjects Experiencing a Dose Limiting Toxicity at Various Dose Levels When Given CX-2009 as a Monotherapy <sup>[1]</sup>
-----------------	--

End point description:

Determine the safety profile of CX-2009, the MTD/RP2D, and the DLTs of CX-2009 when administered IV every 14 or 21 days as monotherapy to participants with selected advanced or recurrent solid tumors. Adverse event collection and assessment will be evaluated for all participants receiving study drug to evaluate the safety, tolerability, and determine DLTs at MTD/RP2D.

End point type	Primary
----------------	---------

End point timeframe:

Every 14 or 21 days (dose limiting toxicity period)

Notes:

[1] - No statistical analyses have been specified for this primary end point. It is expected there is at least one statistical analysis for each primary end point.

Justification: The study was terminated early, but the RP2D was determined for CX-2009. The study commenced with accelerated dose titration in 1 single-subject cohort (0.25 mg/kg AIBQ), followed by a standard 3+3 design to determine the MTD, and then concluded using a Bayesian interval dose-finding design (mTPI-2) cohort with up to 38 subjects with demonstrated high CD166 expression to determine the RP2D. No other statistical analyses were done.

## Secondary: The Percentage of Subjects Experiencing Anti-cancer Activity (ORR) at Various Dose Levels When Given CX-2009 as a Monotherapy

End point title	The Percentage of Subjects Experiencing Anti-cancer Activity (ORR) at Various Dose Levels When Given CX-2009 as a Monotherapy <sup>[2]</sup>
-----------------	--

End point description:

Evaluate the efficacy of CX-2009 when administered IV every 21 days as monotherapy at the MTD/RP2D. Efficacy will be assessed via objective response rate (ORR) by RECIST version 1.1. ORR is defined as the proportion of patients with complete response (CR) or partial response (PR) on two consecutive tumor assessments with scan dates at least 4 weeks apart according to RECIST (version 1.1)

End point type	Secondary
----------------	-----------

End point timeframe:

2 Years

Notes:

[2] - The end point is not reporting statistics for all the arms in the baseline period. It is expected all the baseline period arms will be reported on when providing values for an end point on the baseline period.

Justification: This study was terminated early due to the Covid Pandemic and the company's business decision to separate the Phase 2 (part B) course of the study to a separate, new Phase 2 study. The Phase 1 (part A) course of the study was completed and the RP2D was determined. Part B only enrolled 3 patients and the Secondary (ORR) and other Outcomes were not analyzed.

Notes:

## Interruptions (globally)

Were there any global interruptions to the trial? Yes

Date	Interruption	Restart date
09 April 2020	Enrollment into the study was terminated in April 2020 due to a strategic business decision and the Covid Pandemic. The study was terminated by CytomX before patients were enrolled into Parts C2, D1, or D2.	-

---

Notes:

## **Limitations and caveats**

Limitations of the trial such as small numbers of subjects analysed or technical problems leading to unreliable data.

Additional study parts added in Amendments 5, 6, 6.1, and 7 did not enroll any patients and are not further discussed. Enrollment into the study was terminated in April 2020 and did not complete all planned secondary outcomes.
