Paediatric regulatory details

Is trial part of an agreed paediatric investigation plan (PIP)	Yes
EMA paediatric investigation plan number(s)	EMA-002310-PIP02-17
Does article 45 of REGULATION (EC) No 1901/2006 apply to this trial?	No
Does article 46 of REGULATION (EC) No 1901/2006 apply to this trial?	Yes

Notes:

Results analysis stage

Analysis stage	Final
Date of interim/final analysis	26 March 2021
Is this the analysis of the primary completion data?	Yes
Primary completion date	11 December 2019
Global end of trial reached?	Yes
Global end of trial date	18 December 2020
Was the trial ended prematurely?	No

Notes:

General information about the trial

Main objective of the trial:

To evaluate the efficacy, relative to placebo, of 6 months of oral treatment with ACH-0144471 (also known as danicopan and ALXN2040) in participants with C3G based on: • Renal biopsy results • Improvement relative to baseline in proteinuria

Protection of trial subjects:

This study was conducted in accordance with the ethical principles of Good Clinical Practice (GCP), according to the International Council for Harmonisation of Technical Requirements for Pharmaceuticals for Human Use (ICH) Harmonized Tripartite Guideline, in addition to following the laws and regulations of the country or countries in which a study is conducted.

Background therapy: -

Evidence for comparator: -

Actual start date of recruitment	12 June 2018
Long term follow-up planned	Yes
Long term follow-up rationale	Safety, Efficacy
Long term follow-up duration	21 Months
Independent data monitoring committee (IDMC) involvement?	No

Notes:

Population of trial subjects

Subjects enrolled per country

Country: Number of subjects enrolled	United States: 12
Country: Number of subjects enrolled	United Kingdom: 1
Worldwide total number of subjects	13
EEA total number of subjects	0

Notes:

Subjects enrolled per age group

In utero	0
Preterm newborn - gestational age < 37 wk	0
Newborns (0-27 days)	0
Infants and toddlers (28 days-23 months)	0
Children (2-11 years)	0
Adolescents (12-17 years)	2

Adults (18-64 years)	11
From 65 to 84 years	0
85 years and over	0

Subject disposition

Recruitment

Recruitment details: -

Pre-assignment

Screening details:

To enroll in the study, participants were required to have a biopsy confirmed diagnosis of C3G, with initial diagnosis made at least 3 months prior to dosing and significant proteinuria.

Period 1

Period 1 title	Double-blind Treatment Period
Is this the baseline period?	Yes
Allocation method	Randomised - controlled
Blinding used	Double blind
Roles blinded	Subject, Investigator

Blinding implementation details:

Participants were randomized 1:1 to treatment with danicopan or placebo during the 6 month Blinded Treatment Period.

Arms

Are arms mutually exclusive?	Yes
------------------------------	-----

Arm title	Danicopan (Double-blind), Followed by Danicopan (Open-label)
------------------	--

Arm description:

Danicopan was administered at a starting dose of 100 milligrams (mg) 3 times daily (TID) for the first 2 weeks, then dosage was to be increased to 200 mg TID for the remainder of the 6-month Treatment Period.

All participants who completed the double-blind treatment period were enrolled in the open-label extension period and received danicopan 200 mg TID.

Arm type	Experimental
Investigational medicinal product name	Danicopan
Investigational medicinal product code	
Other name	ACH-4471, ACH4471, 4471, ACH-0144471 (formerly), ALXN2040
Pharmaceutical forms	Tablet
Routes of administration	Oral use

Dosage and administration details:

Danicopan was administered TID.

Arm title	Placebo (Double-blind), Followed by Danicopan (Open-label)
------------------	--

Arm description:

Placebo was administered TID during the 6-month Treatment Period.

All participants who completed the double-blind treatment period were enrolled in the open-label extension period and received danicopan 200 mg TID.

Arm type	Placebo
Investigational medicinal product name	Placebo
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Tablet
Routes of administration	Oral use

Dosage and administration details:

Matching placebo was administered TID.

Number of subjects in period 1	Danicopan (Double-blind), Followed by Danicopan (Open-label)	Placebo (Double-blind), Followed by Danicopan (Open-label)
Started	6	7
Received at least 1 dose of study drug	6	7
Completed	6	6
Not completed	0	1
Accidental unblinding	-	1

Period 2

Period 2 title	Open-label Extension period
Is this the baseline period?	No
Allocation method	Non-randomised - controlled
Blinding used	Not blinded

Arms

Are arms mutually exclusive?	Yes
Arm title	Danicopan (Double-blind), Followed by Danicopan (Open-label)

Arm description:

Danicopan was administered at a starting dose of 100 milligrams (mg) 3 times daily (TID) for the first 2 weeks, then dosage was to be increased to 200 mg TID for the remainder of the 6-month Treatment Period.

All participants who completed the double-blind treatment period were enrolled in the open-label extension period and received danicopan 200 mg TID.

Arm type	Experimental
Investigational medicinal product name	Danicopan
Investigational medicinal product code	
Other name	ACH-4471, ACH4471, 4471, ACH-0144471 (formerly), ALXN2040
Pharmaceutical forms	Tablet
Routes of administration	Oral use

Dosage and administration details:

Danicopan 200 mg was administered TID.

Arm title	Placebo (Double-blind), Followed by Danicopan (Open-label)
------------------	--

Arm description:

Placebo was administered TID during the 6-month Treatment Period.

All participants who completed the double-blind treatment period were enrolled in the open-label extension period and received danicopan 200 mg TID.

Arm type	Placebo
Investigational medicinal product name	Danicopan
Investigational medicinal product code	
Other name	ACH-4471, ACH4471, 4471, ACH-0144471 (formerly), ALXN2040
Pharmaceutical forms	Tablet
Routes of administration	Oral use

Dosage and administration details:

Danicopan 200 mg was administered TID.

Number of subjects in period 2	Danicopan (Double-blind), Followed by Danicopan (Open-label)	Placebo (Double-blind), Followed by Danicopan (Open-label)
Started	6	6
Received at least 1 dose of study drug	6	6
Completed	1	0
Not completed	5	6
Sponsor decision to close study	3	4
Adverse event, non-fatal	-	1
Lack of efficacy	2	1

Primary: Change From Baseline In Composite Biopsy Score At Week 28

End point title	Change From Baseline In Composite Biopsy Score At Week
-----------------	--

End point description:

The composite biopsy score was based on a score incorporating changes in the activity index, glomerular C3c staining, and glomerular macrophage infiltration at the end of 6 months of treatment. The composite renal biopsy index scoring system ranged from 0 to 21, with higher scores indicating worse outcomes. All participants who received at least 1 dose of study drug and had analyzable data at the specified timepoints.

End point type	Primary
----------------	---------

End point timeframe:

Baseline, Week 28

Notes:

[1] - No statistical analyses have been specified for this primary end point. It is expected there is at least one statistical analysis for each primary end point.

Justification: Mean values and mean change from baseline were summarized descriptively by treatment group.

More information

Substantial protocol amendments (globally)

Were there any global substantial amendments to the protocol? Yes

Date	Amendment
25 October 2017	<ul style="list-style-type: none">• Allowed visits on Weeks 14, 18, 22, and 26 to be conducted by phone rather than in the clinic, at the discretion of the investigator, in order to reduce the burden on participants in the study.
12 December 2017	<ul style="list-style-type: none">• Allowed investigators who wished to do so to collect measured glomerular filtration rate (GFR) in addition to the existing eGFR calculations.• The contraception requirements were modified to align with updated standard wording, and serious adverse event reporting contact information was updated.
07 March 2018	<ul style="list-style-type: none">• Changed improvement in eGFR from a primary to a secondary objective and aligned endpoints with this change.• Adjusted inclusion/exclusion criteria related to complement components in order to facilitate enrollment of suitable participants.• Removed the planned collection pharmacokinetic profile samples on Day 3 in order to reduce the burden on participants.• The contraception requirements were modified to align with updated standard wording.• Vaccination procedures were updated to refer to national and/or local guidelines, minor wording changes are being made for clarity.
15 February 2019	<ul style="list-style-type: none">• Made changes to the inclusion and exclusion criteria to better reflect the intended participant population and to facilitate enrollment.• Changed the dose escalation strategy so that all participants will escalate after 2 weeks.• Reduced sample collection and added flexibility to the collection schedule to reduce the burden on participants (including making collection of renal biopsies an optional sub-study).
19 June 2019	<ul style="list-style-type: none">• Made changes to the inclusion and exclusion criteria to remove the allowance of adolescents in the study population.• Reduced sample collection and added flexibility to the collection schedule to reduce the burden on participants.• Removed the biopsy sub-study option (all participants had biopsy- confirmed diagnosis).• Extended the study to Week 104 (addition of a 12-month long- term follow-up period).• Removed Data and Safety Monitoring Board since the study was only blinded to the Investigator, site staff and participants (Sponsor not blinded).• Reduced the number of in-clinic study visits by having the ability to do visits as phone calls.• Reduced the number of expected participants to 20.
15 May 2020	<ul style="list-style-type: none">• Increased duration of study treatment.• Allowed home and telephone visits, local laboratory testing, and study drug to be sent directly to participant's home when clinic visits were not possible due to the coronavirus disease 2019 (COVID-19) global pandemic.• Allowed optional renal biopsy at Week 52 and Week 104 to be postponed due to COVID-19 global pandemic, and to be performed when possible.• Updated contraceptive language to align with most recent Investigational Brochure.

Notes:

Interruptions (globally)

Were there any global interruptions to the trial? No

Limitations and caveats

Limitations of the trial such as small numbers of subjects analysed or technical problems leading to unreliable data.

None.

Notes:
