

## Clinical trial results:

### A Phase 4 Double-blinded, Randomized, Active Comparator-controlled Clinical Trial to Study the Efficacy, Safety, and Pharmacokinetics of Sugammadex (MK-8616) for Reversal of Neuromuscular Blockade in Pediatric Participants Aged Birth to <2

#### Summary

EudraCT number	2017-000693-11
Trial protocol	BE DK FI HU NL FR
Global end of trial date	21 September 2023

#### Results information

Result version number	v1 (current)
This version publication date	06 March 2024
First version publication date	06 March 2024

#### Trial information

##### Trial identification

Sponsor protocol code	8616-169
-----------------------	----------

##### Additional study identifiers

ISRCTN number	-
ClinicalTrials.gov id (NCT number)	NCT03909165
WHO universal trial number (UTN)	-

Notes:

#### Paediatric regulatory details

Is trial part of an agreed paediatric investigation plan (PIP)	No
Does article 45 of REGULATION (EC) No 1901/2006 apply to this trial?	No
Does article 46 of REGULATION (EC) No 1901/2006 apply to this trial?	Yes

Notes:

## Results analysis stage

Analysis stage	Final
Date of interim/final analysis	21 September 2023
Is this the analysis of the primary completion data?	Yes
Primary completion date	21 September 2023
Global end of trial reached?	Yes
Global end of trial date	21 September 2023
Was the trial ended prematurely?	No

Notes:

## General information about the trial

Main objective of the trial:

This study evaluated the efficacy, safety, and pharmacokinetics (PK) of sugammadex (MK-8616) for reversal of both moderate and deep neuromuscular blockade (NMB) in pediatric participants aged birth to <2 years. The primary hypothesis of this study was that sugammadex was superior to neostigmine in reversing moderate NMB as measured by time to neuromuscular recovery.

Protection of trial subjects:

This study was conducted in conformance with Good Clinical Practice standards and applicable country and/or local statutes and regulations regarding ethical committee review, informed consent, and the protection of human subjects participating in biomedical research.

Background therapy: -

Evidence for comparator: -

Actual start date of recruitment	23 July 2019
Long term follow-up planned	No
Independent data monitoring committee (IDMC) involvement?	Yes

Notes:

## Population of trial subjects

### Subjects enrolled per country

Country: Number of subjects enrolled	Australia: 14
Country: Number of subjects enrolled	Belgium: 15
Country: Number of subjects enrolled	Brazil: 1
Country: Number of subjects enrolled	Denmark: 14
Country: Number of subjects enrolled	Finland: 6
Country: Number of subjects enrolled	France: 1
Country: Number of subjects enrolled	Hungary: 1
Country: Number of subjects enrolled	Malaysia: 14
Country: Number of subjects enrolled	Mexico: 11
Country: Number of subjects enrolled	Netherlands: 3
Country: Number of subjects enrolled	Russian Federation: 10
Country: Number of subjects enrolled	United States: 55
Worldwide total number of subjects	145
EEA total number of subjects	40

Notes:

<b>Subjects enrolled per age group</b>	
In utero	0
Preterm newborn - gestational age < 37 wk	0
Newborns (0-27 days)	29
Infants and toddlers (28 days-23 months)	116
Children (2-11 years)	0
Adolescents (12-17 years)	0
Adults (18-64 years)	0
From 65 to 84 years	0
85 years and over	0

## Subject disposition

### Recruitment

Recruitment details:

145 pediatric participants between the ages of birth and <2 years undergoing a procedure requiring a neuromuscular blocking agent (NMBA) for either moderate or deep block were enrolled in this study. Participants were enrolled in 4 age cohorts: birth to 27 days, 28 days to <3 months, 3 months to <6 months, and 6 months to <2 years.

### Pre-assignment

Screening details:

50 participants were allocated to moderate block and reversal (2 mg/kg) or deep block and reversal (4 mg/kg) with sugammadex in Part A. 95 participants were randomized in Part B to moderate block and reversal (2 mg/kg) with sugammadex, deep block and reversal (4 mg/kg) with sugammadex, or moderate block and reversal with neostigmine (50 µg/kg).

### Period 1

Period 1 title	Overall Study (overall period)
Is this the baseline period?	Yes
Allocation method	Randomised - controlled
Blinding used	Double blind
Roles blinded	Subject, Assessor, Investigator, Monitor, Carer

### Arms

Are arms mutually exclusive?	Yes
<b>Arm title</b>	Part A: Sugammadex 2 mg/kg

Arm description:

Participants received a single intravenous (IV) bolus of sugammadex at 2 mg/kg for moderate NMB reversal.

Arm type	Experimental
Investigational medicinal product name	Sugammadex
Investigational medicinal product code	
Other name	MK-8616 Bridion
Pharmaceutical forms	Solution for injection/infusion
Routes of administration	Intravenous use

Dosage and administration details:

Administered per allocation (Part A)/randomization (Part B) in a single IV bolus at 2 mg/kg within 2 minutes of the reappearance of a second twitch (T2) in response to train-of-four (TOF) stimulations for moderate NMB reversal, or in a single IV bolus at 4 mg/kg after final dose of NMBA (rocuronium or vecuronium) within 2 minutes of detection of a target of 1 to 2 post-tetanic counts and no response to TOF stimulations (TOF=0) for deep NMB reversal.

<b>Arm title</b>	Part A: Sugammadex 4 mg/kg
------------------	----------------------------

Arm description:

Participants received a single IV bolus of sugammadex at 4 mg/kg for deep NMB reversal.

Arm type	Experimental
Investigational medicinal product name	Sugammadex
Investigational medicinal product code	
Other name	MK-8616 Bridion
Pharmaceutical forms	Solution for injection/infusion
Routes of administration	Intravenous use

Dosage and administration details:

Administered per allocation (Part A)/randomization (Part B) in a single IV bolus at 2 mg/kg within 2 minutes of the reappearance of a second twitch (T2) in response to train-of-four (TOF) stimulations for moderate NMB reversal, or in a single IV bolus at 4 mg/kg after final dose of NMBA (rocuronium or

vecuronium) within 2 minutes of detection of a target of 1 to 2 post-tetanic counts and no response to TOF stimulations (TOF=0) for deep NMB reversal.

<b>Arm title</b>	Part B: Sugammadex 2 mg/kg
Arm description: Participants received a single IV bolus of sugammadex at 2 mg/kg for moderate NMB reversal.	
Arm type	Experimental
Investigational medicinal product name	Sugammadex
Investigational medicinal product code	
Other name	MK-8616 Bridion
Pharmaceutical forms	Solution for injection/infusion
Routes of administration	Intravenous use

Dosage and administration details:

Administered per allocation (Part A)/randomization (Part B) in a single IV bolus at 2 mg/kg within 2 minutes of the reappearance of a second twitch (T2) in response to train-of-four (TOF) stimulations for moderate NMB reversal, or in a single IV bolus at 4 mg/kg after final dose of NMBA (rocuronium or vecuronium) within 2 minutes of detection of a target of 1 to 2 post-tetanic counts and no response to TOF stimulations (TOF=0) for deep NMB reversal.

<b>Arm title</b>	Part B: Sugammadex 4 mg/kg
Arm description: Participants received a single IV bolus of sugammadex at 4 mg/kg for deep NMB reversal.	
Arm type	Experimental
Investigational medicinal product name	Sugammadex
Investigational medicinal product code	
Other name	MK-8616 Bridion
Pharmaceutical forms	Solution for injection/infusion
Routes of administration	Intravenous use

Dosage and administration details:

Administered per allocation (Part A)/randomization (Part B) in a single IV bolus at 2 mg/kg within 2 minutes of the reappearance of a second twitch (T2) in response to train-of-four (TOF) stimulations for moderate NMB reversal, or in a single IV bolus at 4 mg/kg after final dose of NMBA (rocuronium or vecuronium) within 2 minutes of detection of a target of 1 to 2 post-tetanic counts and no response to TOF stimulations (TOF=0) for deep NMB reversal.

<b>Arm title</b>	Part B: Neostigmine + (Glycopyrrolate or Atropine)
Arm description: Participants received a single IV bolus containing neostigmine (50 µg/kg; up to 5 mg maximum dose) in combination with either glycopyrrolate (10 µg/kg) or atropine sulfate (20 µg/kg) based on availability and/or contraindications, for moderate NMB reversal.	
Arm type	Active comparator
Investigational medicinal product name	Neostigmine
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Solution for injection/infusion
Routes of administration	Intravenous use

Dosage and administration details:

For moderate NMB reversal, a single IV. bolus containing neostigmine (50 µg/kg; up to 5 mg maximum dose) with either glycopyrrolate or atropine was given after final dose of NMBA (rocuronium or vecuronium) and within 2 minutes of the reappearance of T2 in response to TOF stimulations.

Investigational medicinal product name	Atropine
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Solution for injection/infusion
Routes of administration	Intravenous use

Dosage and administration details:

Atropine (20 ug/kg) administered in a single IV. bolus with neostigmine (50 µg/kg; up to 5 mg maximum dose) after final dose of NMBA (rocuronium or vecuronium) and within 2 minutes of the reappearance of T2 in response to TOF stimulations.

Investigational medicinal product name	Glycopyrrolate
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Solution for injection/infusion
Routes of administration	Intravenous use

Dosage and administration details:

Glycopyrrolate (10 ug/kg) administered in a single IV. bolus with neostigmine (50 µg/kg; up to 5 mg maximum dose) after final dose of NMBA (rocuronium or vecuronium) and within 2 minutes of the reappearance of T2 in response to TOF stimulations.

### **Primary: Part A: Area Under the Plasma Concentration Time Curve From Time Zero to Infinity (AUC0-inf) for Sugammadex**

End point title	Part A: Area Under the Plasma Concentration Time Curve From Time Zero to Infinity (AUC0-inf) for Sugammadex
-----------------	---

End point description:

Pharmacokinetic (PK) blood samples were collected in Part A from pediatric participants at multiple collection times post administration of sugammadex using a sparse sampling approach and used to determine AUC0-inf for sugammadex. As pre-specified by the Statistical Analysis Plan (SAP) for the PK analysis, all PK parameters were analyzed and reported by Part A age cohort (birth to <28 days, 28 days to <3 months, 3 to <6 months, and 6 to <24 months) for each dose (2 mg and 4 mg). Values of 0000 and 9999 indicate that a 95% confidence interval (CI) was not estimated for n<3 due to insufficient data to support its calculation. All pediatric participants in Part A who received at least 1 dose of sugammadex and had at least 5 samples at the time points of interest were analyzed. Per protocol, Part B participants were not analyzed for PK.

End point type	Primary
----------------	---------

End point timeframe:

Day 1: 2, 15, 30, 60, 240 to 360, and 600 to 720 minutes post-dose

### **Primary: Part A: Area Under the Plasma Concentration Time Curve up to the Interpolated Concentration at 4 Hours Post Dose (AUC0-4hr) for Sugammadex**

End point title	Part A: Area Under the Plasma Concentration Time Curve up to the Interpolated Concentration at 4 Hours Post Dose (AUC0-4hr) for Sugammadex <sup>[1]</sup>
End point description: PK blood samples were collected in Part A from pediatric participants at multiple collection times post administration of sugammadex using a sparse sampling approach and used to determine AUC0-4hr for sugammadex. As pre-specified by the SAP for the PK analysis, all PK parameters were analyzed and reported by Part A age cohort (birth to <28 days, 28 days to <3 months, 3 to <6 months, and 6 to <24 months) for each dose (2 mg and 4 mg). Values of 0000 and 9999 indicate that a 95% CI was not estimated for n<3 due to insufficient data to support its calculation. All pediatric participants in Part A who received at least 1 dose of sugammadex and had at least 5 samples at the time points of interest were analyzed. Per protocol, Part B participants were not analyzed for PK.	
End point type	Primary

End point timeframe:

Day 1: 2, 15, 30, 60, 240 to 360, and 600 to 720 minutes post-dose

Notes:

[1] - No statistical analyses have been specified for this primary end point. It is expected there is at least one statistical analysis for each primary end point.

Justification: No statistical analyses were planned for this endpoint.

### Primary: Part B: Time to Neuromuscular Recovery (TTNMR)

End point title	Part B: Time to Neuromuscular Recovery (TTNMR)
End point description:	
Time to neuromuscular recovery was defined as the interval from administration of reversal agent to time to neuromuscular recovery. TTNMR could be assessed by 1 of 4 methods selected by the investigator, based on their judgment of what was technically feasible and clinically appropriate for the participant's procedure. These methods were inclusive of both clinical signs (head lift or hip flexion) and neuromuscular transmission monitoring using either a standard peripheral nerve stimulator or the technically challenging quantitative neuromuscular monitoring to train-of-four (TOF) ratio $\geq 0.9$ . As pre-specified by the protocol and SAP, TTNMR was analyzed only in Part B participants under the setting of moderate block for comparison of sugammadex 2 mg to neostigmine. All participants in Part B who received either sugammadex 2 mg/kg or neostigmine and with available TTNMR data were analyzed.	
End point type	Primary
End point timeframe:	
Within Day 1	

End point values	Part A: Sugammadex 2 mg/kg	Part A: Sugammadex 4 mg/kg	Part B: Sugammadex 2 mg/kg	Part B: Sugammadex 4 mg/kg

upper limit	29.5

<b>Statistical analysis title</b>	Sugammadex 4 mg/kg vs. Neostigmine
Statistical analysis description: The difference in percentage of sugammadex versus Neostigmine +plus (Glycopyrrolate or Atropine) was based on the Miettinen and Nurminen method stratified by neuromuscular blocking agent and age group.	
Comparison groups	Parts A + B: Sugammadex 4 mg/kg v Part B: Neostigmine + (Glycopyrrolate or Atropine)
Number of subjects included in analysis	94
Analysis specification	Pre-specified
Analysis type	other
Parameter estimate	Difference in Percentage
Point estimate	5.9
Confidence interval	
level	95 %
sides	2-sided
lower limit	-13.5
upper limit	26.7

## Secondary: Part B: Time to Extubation

End point title	Part B: Time to Extubation
-----------------	----------------------------

End point description:

Time to extubation was defined as the interval from administration of reversal agent to removal of the endotracheal tube. Monitoring of time to extubation was achieved using the Extubation Readiness Assessment, which evaluated and documented clinically relevant elements including neuromuscular recovery, mental status, return of spontaneous ventilation, adequate oxygenation, hemodynamically stable, and core body temperature with "Yes"/"No" answers (no overall score or direction attributed). The Operating Room anesthesiologist or other trained personnel were responsible for assessing extubation readiness beginning about 1 minute after study treatment administration and reassessing every 60 seconds until time of extubation readiness was achieved.

End point type	Secondary
----------------	-----------

End point timeframe:

Within Day 1

End point values	Part A: Sugammadex 2 mg/kg	Part A: Sugammadex 4 mg/kg	Part B: Sugammadex 2 mg/kg	Part B: Sugammadex 4 mg/kg
Subject group type	Reporting group	Reporting group	Reporting group	Reporting group
Number of subjects analysed	0 <sup>[10]</sup>	0 <sup>[11]</sup>	29	0 <sup>[12]</sup>
Units: Minutes				
median (confidence interval 95%)	( to )	( to )	7.9 (5.7 to 11.6)	( to )

Notes:

[10] - Time to Extubation was analyzed only in Part B under setting of moderate block.

[11] - Time to Extubation was analyzed only in Part B under setting of moderate block.

[12] - Time to Extubation was analyzed only in Part B under setting of moderate block.

End point values	Part B: Neostigmine + (Glycopyrrolate or Atropine)			
Subject group type	Reporting group			
Number of subjects analysed	31			
Units: Minutes				
median (confidence interval 95%)	10.5 (7.9 to 13.5)			

## Statistical analyses

No statistical analyses for this end point

## Adverse events

### Adverse events information

Timeframe for reporting adverse events:

Up to Day 14

Adverse event reporting additional description:

All-Cause Mortality includes all randomized participants. Serious adverse events (SAEs) and Nonserious AEs include all randomized participants who received  $\geq 1$  dose of study drug.

Assessment type	Systematic
-----------------	------------

### Dictionary used

Dictionary name	MedDRA
-----------------	--------

Dictionary version	26.1
--------------------	------

### Reporting groups

Reporting group title	Part A: Sugammadex 2 mg/kg
-----------------------	----------------------------

Reporting group description:

Participants received a single intravenous (IV) bolus of sugammadex at 2 mg/kg for moderate NMB reversal.

Reporting group title	Part B: Neostigmine + (Glycopyrrolate or Atropine)
-----------------------	--

Reporting group description:

Participants received a single IV bolus containing neostigmine (50 µg/kg; up to 5 mg maximum dose) in combination with either glycopyrrolate (10 µg/kg) or atropine sulfate (20 µg/kg) based on availability and/or contraindications, for moderate NMB reversal.

Reporting group title	Part B: Sugammadex 4 mg/kg
-----------------------	----------------------------

Reporting group description:

Participants received a single IV bolus of sugammadex at 4 mg/kg for deep NMB reversal.

Reporting group title	Part A: Sugammadex 4 mg/kg
-----------------------	----------------------------

Reporting group description:

Participants received a single IV bolus of sugammadex at 4 mg/kg for deep NMB reversal.

Reporting group title	Part B: Sugammadex 2 mg/kg
-----------------------	----------------------------

Reporting group description:

Participants received a single IV bolus of sugammadex at 2 mg/kg for moderate NMB reversal.

## More information

### Substantial protocol amendments (globally)

Were there any global substantial amendments to the protocol? Yes

Date	Amendment
23 April 2020	Major changes of Amendment (AM) 1 included allowing the use of deep endotracheal extubation in addition to awake extubation, moving "time to neuromuscular recovery" from a secondary endpoint to a primary efficacy endpoint and moving "time to extubation" from a primary endpoint to a secondary endpoint, and adding a hypothesis for "time to neuromuscular recovery".
10 January 2023	Major changes of AM 2 included a Sponsor entity name and address change and changes to the collection of "core temperature" after assessing the ERA question.

Notes:

---

### Interruptions (globally)

Were there any global interruptions to the trial? No

### Limitations and caveats

None reported
