

Clinical trial results:

A Multicentre, Randomised, Double-blind, Parallel Group, Placebo-controlled, Phase 3 Efficacy and Safety Study of Benralizumab (MEDI-563) Added to Medium to High-dose Inhaled Corticosteroid Plus Long-acting 2 Agonist in Patients with Uncontrolled Asthma

Summary

EudraCT number	2017-000702-38
Trial protocol	Outside EU/EEA
Global end of trial date	30 January 2023

Results information

Result version number	v1 (current)
This version publication date	30 September 2023
First version publication date	30 September 2023

Notes:

Paediatric regulatory details

Is trial part of an agreed paediatric investigation plan (PIP)	No
Does article 45 of REGULATION (EC) No 1901/2006 apply to this trial?	No
Does article 46 of REGULATION (EC) No 1901/2006 apply to this trial?	No

Notes:

Results analysis stage

Analysis stage	Final
Date of interim/final analysis	01 March 2023
Is this the analysis of the primary completion data?	Yes
Primary completion date	30 January 2023
Global end of trial reached?	Yes
Global end of trial date	30 January 2023
Was the trial ended prematurely?	No

Notes:

General information about the trial

Main objective of the trial:

To evaluate the effect of benralizumab on asthma exacerbations in patients on medium- to high-dose ICS-LABA with uncontrolled asthma

Protection of trial subjects:

The study is performed in accordance with ethical principles that have their origin in the Declaration of Helsinki and are consistent with International Conference on Harmonisation (ICH)/Good Clinical Practice, applicable regulatory requirements and the AstraZeneca policy on Bioethics and Human Biological samples. Each PI is responsible for providing the ECs/institutional review boards (IRBs) with reports of any serious and unexpected adverse drug reactions from any other study conducted with the investigational product. AstraZeneca provides this information to the PI so that he/she can meet these reporting requirements. During the study, AstraZeneca representative have regular contacts with the study site, ie, monitoring the study.

Background therapy: -

Evidence for comparator: -

Actual start date of recruitment	07 September 2017
Long term follow-up planned	No
Independent data monitoring committee (IDMC) involvement?	No

Notes:

Population of trial subjects

Subjects enrolled per country

Country: Number of subjects enrolled	China: 522
Country: Number of subjects enrolled	Taiwan: 14
Country: Number of subjects enrolled	Philippines: 49
Country: Number of subjects enrolled	Korea, Republic of: 110
Worldwide total number of subjects	695
EEA total number of subjects	0

Notes:

Subjects enrolled per age group

In utero	0
Preterm newborn - gestational age < 37 wk	0
Newborns (0-27 days)	0
Infants and toddlers (28 days-23 months)	0

Children (2-11 years)	0
Adolescents (12-17 years)	1
Adults (18-64 years)	594
From 65 to 84 years	100
85 years and over	0

Subject disposition

Recruitment

Recruitment details:

695 participants were randomized to received treatment in study D3250C00036 (MIRACLE) with Benralizumab or placebo. All the 695 randomized participants received treatment with study drug. Of the 695 dosed, 348 (50.1%) participants received Benralizumab and 347 (49.9%) participants received placebo.

Pre-assignment

Screening details:

At the first visit, the enrollment visit 1, participants were evaluated regarding the protocol mandated inclusion and exclusion criteria. After enrollment, eligible participants were randomized to either placebo or Benralizumab 30 mg at a 1:1 ratio, administered subcutaneously every 4 weeks for the first 3 doses and then every 8 weeks thereafter.

Period 1

Period 1 title	Overall Study (overall period)
Is this the baseline period?	Yes
Allocation method	Randomised - controlled
Blinding used	Double blind
Roles blinded	Subject, Investigator, Data analyst, Carer, Assessor

Arms

Are arms mutually exclusive?	Yes
Arm title	Benralizumab 30 mg

Arm description:

Benralizumab administered subcutaneously

Arm type	Experimental
Investigational medicinal product name	Benralizumab
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Solution for injection in pre-filled syringe
Routes of administration	Subcutaneous use

Dosage and administration details:

30 mg, administered every 4 weeks for the first 3 doses and then every 8 weeks after.

Arm title	Placebo
------------------	---------

Arm description:

Placebo administered subcutaneously

Arm type	Placebo
Investigational medicinal product name	Placebo
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Solution for injection in pre-filled syringe
Routes of administration	Subcutaneous use

Dosage and administration details:

30 mg, administered every 4 weeks for the first 3 doses and then every 8 weeks after.

Number of subjects in period 1	Benralizumab 30 mg	Placebo
Started	348	347
Dosed	348	347
Completed	331	321
Not completed	17	26
Consent withdrawn by subject	11	22
V18 SKIPPED DUE TO LOGISTICS REASON	1	-
Adverse event, non-fatal	4	-
PI DECISION DUE TO LACK OF CRC RESOURCES	-	2
Pregnancy	1	-
Lost to follow-up	-	1
Fail to meet randomization criteria	-	1

-----------------	--

s Respiratory Questionnaire (SGRQ) for patients on medium to high-dose ICS-LABA with uncontrolled asthma and baseline eosinophils $\geq 300/\mu\text{L}$

End point description:

The SGRQ is a 50-item PRO instrument developed to measure the HRQoL of patients with airway diseases. The questionnaire is divided into two parts: part 1 consists of 8 items pertaining to the severity of respiratory symptoms in the preceding 4 weeks; part 2 consists of 42 items related to the daily activity and psychosocial impacts of the individual's respiratory condition. The total score indicates the impact of disease on overall HRQoL. This total score is expressed as a percentage of overall impairment, in which 100 represents the worst possible HRQoL and 0 indicates the best possible HRQoL.

Statistical analyses

No statistical analyses for this end point

Secondary: Percent change from baseline at week 48 in blood eosinophil levels for

patients on medium to high-dose ICS-LABA with uncontrolled asthma and baseline eosinophils $\geq 300/\mu\text{L}$

End point title	Percent change from baseline at week 48 in blood eosinophil levels for patients on medium to high-dose ICS-LABA with uncontrolled asthma and baseline eosinophils $\geq 300/\mu\text{L}$
End point description: Percent change from baseline at Week 48 in blood eosinophil levels	
End point type	Secondary
End point timeframe: From randomization through Study Week 48	

End point values	Benralizumab 30 mg	Placebo		
Subject group type	Reporting group	Reporting group		
Number of subjects analysed	213	199		
Units: Percentage				
arithmetic mean (standard deviation)	-80.6 (\pm 34.65)	42.3 (\pm 380.86)		

Statistical analyses

Statistical analysis title	Mixed Effect Model Repeated Measurement
Comparison groups	Benralizumab 30 mg v Placebo
Number of subjects included in analysis	412
Analysis specification	Pre-specified
Analysis type	superiority
P-value	< 0.0001 ^[14]
Method	Mixed models analysis
Parameter estimate	Mean difference (final values)
Point estimate	-119.31
Confidence interval	
level	95 %
sides	2-sided
lower limit	-169.78
upper limit	-68.84

Notes:

[14] - Nominal p-value. Not multiplicity protected by testing procedure.

Other pre-specified: Annual asthma exacerbation rate in patients on medium to high-dose ICS-LABA with uncontrolled asthma and baseline eosinophils $< 300/\mu\text{L}$

End point title	Annual asthma exacerbation rate in patients on medium to high-dose ICS-LABA with uncontrolled asthma and baseline eosinophils $< 300/\mu\text{L}$
End point description: Annual asthma exacerbation rate over the 48-week treatment period among benralizumab and placebo groups	
End point type	Other pre-specified

End point timeframe:

From randomization through Study Week 48.

End point values	Benralizumab 30 mg	Placebo		
Subject group type	Reporting group	Reporting group		
Number of subjects analysed	112	110		
Units: events/patient-year				
least squares mean (confidence interval 95%)	0.72 (0.49 to 1.06)	0.87 (0.61 to 1.24)		

Statistical analyses

Statistical analysis title	Negative Binomial Model
Comparison groups	Benralizumab 30 mg v Placebo
Number of subjects included in analysis	222

subjects affected / exposed	16 / 347 (4.61%)	9 / 348 (2.59%)
occurrences (all)	19	13

More information

Substantial protocol amendments (globally)

Were there any global substantial amendments to the protocol? Yes

Date	Amendment
28 November 2016	<ol style="list-style-type: none">1. The SGRQ replaced the AQLQ(s)+122. Amended inclusion criteria #8, #13, and #143. Amended exclusion criteria #18, #19, #24, and #304. Updated text about visit dates and medication restrictions in Section 4, Table 15. In Section 7.6.1.1 (background medication), added "medium to high dose" for ICS, and revised duration for ICS-LABA treatment to at least 6 months prior to Visit 1 and during the study6. Removed the independent adjudication for asthma-related exacerbation7. Removed the safety objective "Physical Examination"
25 April 2018	<p>In Section 1.4, replaced "Approximately 834 patients will be randomised, among which at least 666 patients (333 patients/arm) patients will be recruited from China" with "Approximately 666 patients will be randomised, among which approximately 534 patients (267 patients/arm) will be recruited from China." Related changes to stratum language in Sections 3.3, 3.10.2, and 8.2 due to the patient sample size change. The sample size justification was also updated.</p>
17 December 2019	<ol style="list-style-type: none">1. Amended inclusion criteria #3, #5, and #72. Added inclusion criteria #14 ("Pre-bronchodilator FEV1 of < 80% predicted [<90% predicted for patients aged 12 to 17 year] at Visit 2") and #16 ("ACQ-6 score \geq 1.5 at Visit 2")3. In Section 3.8.1 and Section 5.1.2, amended language about background medications and about withholding ICS-LABA therapy on the day of scheduled spirometry visits4. New Section 3.10.5 ("withdrawal due to repeat exacerbations during screening") was added5. In Section 4, updated ACQ-6 assessment timing6. In Section 6.3.3, SAE variables were added7. In Section 7.6.1.1, adjusted language about changing the ICS-LABA dose and documentation
18 December 2020	<ol style="list-style-type: none">1. In Sections 1.4 and 3.3, changed percentage of China patients from approximately 80% to at least 70%, and removed specific regions2. In Sections 3.9 and 7.4, removed the criteria of 2 consecutive doses IP missed for discontinuation; and added statement of how to deal with the cases of a patient missing more than 2 doses within a calendar year, respectively3. In Section 4.4, new wording added to give guidance on how the study could continue in the event of a serious disruption with details of mitigation that could be employed to ensure study continuity. Language in Appendix G was updated in a similar way4. In Section 5.3.8, added language to include the possibility of patient testing performed during public health crisis5. In Section 8.5, added additional analyses to address possible impact of study disruption6. In Appendix D for anaphylaxis: definition, signs, symptoms and management introduction: changed the wording of appropriate drugs at study sites and updated monitoring timeframe7. In Appendix G: Changes Related to Mitigation of Study Disruptions Due to Cases of Civil Crisis, Natural Disaster, or Public Health Crisis: new wording was added which gave guidance on how the study could continue in the event of a serious disruption with details of mitigation that could be employed to ensure study continuity

Notes:

Interruptions (globally)

Were there any global interruptions to the trial? No

Limitations and caveats
