

Clinical trial results:

An Open-Label, Single Arm, Multiple Dose, Dose Escalation Study to Evaluate the Safety and Tolerability of QR-110 in Subjects with Leber's Congenital Amaurosis (LCA) due to c.2991+1655A>G Mutation (p. Cys998X) in the CEP290 Gene

Paediatric regulatory details

Is trial part of an agreed paediatric investigation plan (PIP)	No
Does article 45 of REGULATION (EC) No 1901/2006 apply to this trial?	No
Does article 46 of REGULATION (EC) No 1901/2006 apply to this trial?	No

Notes:

Results analysis stage

Analysis stage	Final
Date of interim/final analysis	21 October 2019
Is this the analysis of the primary completion data?	Yes
Primary completion date	02 October 2019
Global end of trial reached?	Yes
Global end of trial date	02 October 2019
Was the trial ended prematurely?	No

Notes:

General information about the trial

Main objective of the trial:

The primary objective of the study is to evaluate the safety and tolerability of QR-110 administered via intravitreal injection (IVT) in subjects with Leber Congenital Amaurosis type 10 (LCA10) due to the c.2991+1655A>G (p.Cys998X) mutation

The secondary objectives of the study were to evaluate the:

- Serum pharmacokinetics of QR-110 administered by IVT injection in subjects with LCA10 due to the c.2991+1655A>G (p.Cys998X) mutation
- Efficacy of QR-110 administered by IVT injection in subjects with LCA10 due to the c.2991+1655A>G (p.Cys998X) mutation

Protection of trial subjects:

The study was conducted in accordance with ethical principles that have their origin in the Declaration of Helsinki and are consistent with ICH GCP. QR-110 was administered via IVT injection to maximize exposure to study drug at the intended target tissue, the retina. QR-110 was administered in a unilateral manner to the subject's worse eye, a common practice in the development of ophthalmic products. Following IVT injection of QR-110, subjects were monitored for increases in intraocular pressure (IOP) and signs of inflammation and endophthalmitis during the post-injection period. Subjects were also seen at 1 and 7 days after each injection. If sedation or anesthesia was performed during the administration of the IVT injection, general health monitoring was provided by the study anesthesiologist pre- and post-sedation/anesthesia, according to local institutional guidelines. A Data Monitoring Committee (DMC) was involved to recommend on dose escalation and provided safety oversight for the study.

Background therapy:

There are currently no approved therapies for the treatment of LCA10.

Evidence for comparator:

No placebo or sham injections were administered.

Actual start date of recruitment	15 May 2017
Long term follow-up planned	Yes
Long term follow-up rationale	Safety, Efficacy
Long term follow-up duration	24 Months
Independent data monitoring committee (IDMC) involvement?	Yes

Notes:

Population of trial subjects

Subjects enrolled per country

Country: Number of subjects enrolled	Belgium: 2
Country: Number of subjects enrolled	United States: 9
Worldwide total number of subjects	11
EEA total number of subjects	2

Notes:

Subjects enrolled per age group	
In utero	0
Preterm newborn - gestational age < 37 wk	0
Newborns (0-27 days)	0
Infants and toddlers (28 days-23 months)	0
Children (2-11 years)	2
Adolescents (12-17 years)	3
Adults (18-64 years)	6
From 65 to 84 years	0
85 years and over	0

Subject disposition

Recruitment

Recruitment details:

11 subjects were enrolled in this study. The study plan included up to 6 cohorts (3 adult and 3 pediatric). Each planned cohort was to have at least 2 subjects, and each dose level was to be tested in 1 adult cohort and 1 pediatric cohort.

Pre-assignment

Screening details:

Key inclusion criteria were: ≥ 6 years at Screening, a clinical diagnosis of LCA with a molecular diagnosis of homozygosity or compound heterozygosity for the c.2991+1655A>G (p.Cys998X) mutation in the CEP290 gene and a best-corrected visual acuity equal or better than light perception and equal or worse than logMAR +0.6 in the treatment eye

Period 1

Period 1 title	Overall trial (overall period)
Is this the baseline period?	Yes
Allocation method	Not applicable
Blinding used	Not blinded

Blinding implementation details:

No randomization or masking has been used in this study.

Arms

Are arms mutually exclusive?	Yes
Arm title	Cohort 1: 160/80 µg (loading dose/maintenance dose)

Arm description:

One 160 µg loading dose, followed by up to three 80 µg maintenance doses.

Arm type	Experimental
Investigational medicinal product name	QR-110
Investigational medicinal product code	QR-110
Other name	sepoparsen
Pharmaceutical forms	Concentrate for solution for injection
Routes of administration	Intravitreal use

Dosage and administration details:

QR-110 solution for injection, 10 mg/mL. Subjects receive QR-110 by IVT injection.

QR-110 was to be administered once every 3 months for up to 4 doses per subject (ie, an initial loading dose at Day 1, followed by 3 maintenance doses at Month 3, 6 and 9).

Arm title	Cohort 2: 320/160 µg (loading dose/maintenance dose)
------------------	--

Arm description:

One 320 µg loading dose, followed by up to three 160 µg maintenance doses.

Arm type	Experimental
Investigational medicinal product name	QR-110
Investigational medicinal product code	QR-110
Other name	sepoparsen
Pharmaceutical forms	Concentrate for solution for injection
Routes of administration	Intravitreal use

Dosage and administration details:

QR-110 solution for injection, 10 mg/mL. Subjects receive QR-110 by IVT injection.

QR-110 was to be administered once every 3 months for up to 4 doses per subject (ie, an initial loading dose at Day 1, followed by 3 maintenance doses at Month 3, 6 and 9.).

Following the observed incidence of cataracts and retinal events, the Sponsor decided in consultation with the DMC to stop administration of the 320/160 µg doses, and to prolong the dosing interval for

subjects in the 160/80 µg dose group.

While the protocol allowed testing of up to 3 dose levels, no dose escalation was performed to the 500 µg/270 µg dose based on efficacy observations; instead, additional subjects were allocated to the 160 µg/80 µg and 320 µg/160 µg dose cohorts.

Number of subjects in period 1	Cohort 1: 160/80 µg (loading dose/maintenance dose)	Cohort 2: 320/160 µg (loading dose/maintenance dose)
Started	6	5
Completed	6	5

Adverse events

Adverse events information

Timeframe for reporting adverse events:

(S)AEs were collected from screening, and classed as medical history, non-treatment emergent AE or AE depending on relation to study drug administration.

Adverse event reporting additional description:

Ten of 11 subjects experienced a total of 61 AEs, of which 33 were treatment related. Reported ocular AEs were mostly mild in severity. The most common AEs were cataract-related (8 of 11 subjects), resulting in an SAE for 6 subjects. Three subjects had an AE indicative of retinal changes. AEs of special interest are depicted.

Assessment type	Non-systematic

occurrences (all)	1	1	

More information

Substantial protocol amendments (globally)

Were there any global substantial amendments to the protocol? Yes

Date	Amendment
18 May 2017	Revisions made to historic genotyping and sequencing requirements (non-substantial amendment)
08 November 2017	Revisions made to add the Cardiff Visual Ability Questionnaire for Children Clarification of Exclusion Criteria 7 through 9 regarding acceptable laboratory values at Screening Revisions to endpoints to enhance nature and quality of data derived from the study (non-substantial amendment)
04 June 2018	Revised BCVA for Inclusion Criteria (substantial amendment not submitted in Belgium)
27 July 2018	Revised efficacy assessments and subject disposition, demographics and baseline disease characteristics to indicate that the average of the measures represented a more accurate assessment of the baseline value, considering all collected values and stabilizing the baseline. Revised BCVA for inclusion criteria Allowed for interim analyses to support the design of subsequent QR-110 clinical studies. Revised Schedule of Events This substantial amendment was not submitted in Belgium
02 August 2018	Added exploratory endpoints that can be done at the investigator's discretion at any protocol visit (non-substantial).

Notes:

Interruptions (globally)

Were there any global interruptions to the trial? No

Limitations and caveats

Limitations of the trial such as small numbers of subjects analysed or technical problems leading to unreliable data.

None reported
