

## Clinical trial results:

### Phase Ib/II Study of Cobimetinib Administered as Single Agent and in Combination with Venetoclax, with or without Atezolizumab, in Patients with Relapsed and Refractory Multiple Myeloma.

#### Summary

EudraCT number	2017-000830-68
Trial protocol	NL DK SE DE CZ ES FR PL
Global end of trial date	18 May 2021

#### Results information

Result version number	v2 (current)
This version publication date	15 March 2023
First version publication date	27 May 2022
Version creation reason	

#### Trial information

##### Trial identification

Sponsor protocol code	BO39813
-----------------------	---------

##### Additional study identifiers

ISRCTN number	-
ClinicalTrials.gov id (NCT number)	NCT03312530
WHO universal trial number (UTN)	-

Notes:

#### Sponsors

Sponsor organisation name	F. Hoffmann-La Roche AG
Sponsor organisation address	Grenzacherstrasse 124, Basel, Switzerland, CH-4070
Public contact	F. Hoffmann-La Roche AG, F. Hoffmann-La Roche AG, 41 616878333, global.trial_information@roche.com
Scientific contact	F. Hoffmann-La Roche AG, F. Hoffmann-La Roche AG, 41 616878333, global.trial_information@roche.com

Notes:

#### Paediatric regulatory details

Is trial part of an agreed paediatric investigation plan (PIP)	No
Does article 45 of REGULATION (EC) No 1901/2006 apply to this trial?	No
Does article 46 of REGULATION (EC) No 1901/2006 apply to this trial?	No

Notes:

## Results analysis stage

Analysis stage	Final
Date of interim/final analysis	18 May 2021
Is this the analysis of the primary completion data?	No
Global end of trial reached?	Yes
Global end of trial date	18 May 2021
Was the trial ended prematurely?	Yes

Notes:

## General information about the trial

Main objective of the trial:

The objective of this trial was to evaluate the efficacy, safety, tolerability, and pharmacokinetics of cobimetinib administered as a single agent, cobimetinib plus venetoclax, and cobimetinib plus venetoclax plus atezolizumab in patients with Relapsed and Refractory Multiple Myeloma (R/R MM).

Protection of trial subjects:

All study subjects were required to read and sign an Informed Consent Form.

Background therapy: -

Evidence for comparator: -

Actual start date of recruitment	13 November 2017
Long term follow-up planned	Yes
Long term follow-up rationale	Efficacy
Long term follow-up duration	2 Years
Independent data monitoring committee (IDMC) involvement?	No

Notes:

## Population of trial subjects

### Subjects enrolled per country

Country: Number of subjects enrolled	Czechia: 2
Country: Number of subjects enrolled	Denmark: 2
Country: Number of subjects enrolled	France: 4
Country: Number of subjects enrolled	Germany: 7
Country: Number of subjects enrolled	Norway: 18
Country: Number of subjects enrolled	Poland: 3
Country: Number of subjects enrolled	Spain: 10
Country: Number of subjects enrolled	Sweden: 3
Worldwide total number of subjects	49
EEA total number of subjects	49

Notes:

### Subjects enrolled per age group

In utero	0
Preterm newborn - gestational age < 37 wk	0
Newborns (0-27 days)	0

Infants and toddlers (28 days-23 months)	0
Children (2-11 years)	0
Adolescents (12-17 years)	0
Adults (18-64 years)	22
From 65 to 84 years	27
85 years and over	0

## Subject disposition

### Recruitment

Recruitment details:

This study was conducted at 16 centers in 8 countries.

### Pre-assignment

Screening details:

A total of 62 participants were screened, of which 49 participants were enrolled.

### Period 1

Period 1 title	Overall Study (overall period)
Is this the baseline period?	Yes
Allocation method	Randomised - controlled
Blinding used	Not blinded

### Arms

Are arms mutually exclusive?	Yes
------------------------------	-----

<b>Arm title</b>	Safety Run-In: Cobimetinib + Venetoclax
------------------	---

Arm description:

Participants received cobimetinib (on Day 1-21) plus venetoclax (on Day 1-28) at escalated doses, in 28-day cycles, to identify the dose level with acceptable safety.

Arm type	Experimental
Investigational medicinal product name	Venetoclax
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Film-coated tablet
Routes of administration	Oral use

Dosage and administration details:

Venetoclax was administered PO daily at a dose of 800 mg on Days 1-28.

Investigational medicinal product name	Cobimetinib
Investigational medicinal product code	
Other name	Cotellic
Pharmaceutical forms	Film-coated tablet
Routes of administration	Oral use

Dosage and administration details:

Cobimetinib was administered PO daily at a dose of 40 mg on Days 1-21.

<b>Arm title</b>	Safety Run-In: Cobimetinib + Venetoclax + Atezolizumab
------------------	--

Arm description:

Participants received cobimetinib (on Day 1-21) plus venetoclax (on Day 1-28) at escalated doses and atezolizumab (on Day 1 and Day 15) at a fixed dose of 840 mg IV, in 28-day cycles, to identify the dose level with acceptable safety.

Arm type	Experimental
Investigational medicinal product name	Cobimetinib
Investigational medicinal product code	
Other name	Cotellic
Pharmaceutical forms	Film-coated tablet
Routes of administration	Oral use

Dosage and administration details:

Cobimetinib was administered PO daily at a dose of 40 mg on Days 1-21.

Investigational medicinal product name	Atezolizumab
Investigational medicinal product code	
Other name	Tecentriq
Pharmaceutical forms	Infusion
Routes of administration	Intravenous use

Dosage and administration details:

Atezolizumab was administered by IV infusion at a dose of 840 mg on Days 1 and 15.

Investigational medicinal product name	Venetoclax
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Film-coated tablet
Routes of administration	Oral use

Dosage and administration details:

Venetoclax was administered PO daily at a dose of 800 mg on Days 1-28.

<b>Arm title</b>	A: Cobimetinib
------------------	----------------

Arm description:

Participants received the standard single-agent cobimetinib dose of 60 milligrams (mg) (3 tablets of 20 mg each) orally (PO) daily on Days 1-21 of each 28-day cycle until disease progression. Upon progression, participants were allowed to receive treatment with cobimetinib and atezolizumab at the recommended Phase II dose of cobimetinib 60 mg PO on Days 1-21 plus atezolizumab intravenous (IV) infusion at a fixed dose of 840 mg on Day 1 and Day 15 of each 28-day cycle. Treatment continued until disease progression, unacceptable toxicity, death, participant or physician decision to withdraw, or pregnancy, whichever occurred first.

Arm type	Experimental
Investigational medicinal product name	Atezolizumab
Investigational medicinal product code	
Other name	Tecentriq
Pharmaceutical forms	Infusion
Routes of administration	Intravenous use

Dosage and administration details:

Atezolizumab was administered by IV infusion at a dose of 840 mg on Days 1 and 15.

Investigational medicinal product name	Cobimetinib
Investigational medicinal product code	
Other name	Cotellic
Pharmaceutical forms	Film-coated tablet
Routes of administration	Oral use

Dosage and administration details:

Cobimetinib was administered PO daily at a dose of 60 mg on Days 1-21.

<b>Arm title</b>	B: Cobimetinib + Venetoclax
------------------	-----------------------------

Arm description:

Participants received cobimetinib PO daily on Days 1-21 of each 28-day cycle plus venetoclax PO daily on Days 1-28 of each 28-day cycle, at the dose level identified in the safety run-in phase. Treatment continued until disease progression, unacceptable toxicity, death, participant or physician decision to withdraw, or pregnancy, whichever occurred first.

Arm type	Experimental
Investigational medicinal product name	Venetoclax
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Film-coated tablet
Routes of administration	Oral use

Dosage and administration details:

Venetoclax was administered PO daily at a dose of 800 mg on Days 1-28.

Investigational medicinal product name	Cobimetinib
Investigational medicinal product code	
Other name	Cotellic
Pharmaceutical forms	Film-coated tablet
Routes of administration	Oral use
Dosage and administration details:	
Cobimetinib was administered PO daily at a dose of 40 mg on Days 1-21.	
<b>Arm title</b>	C: Cobimetinib + Venetoclax + Atezolizumab

**Arm description:**

Participants received cobimetinib PO daily on Days 1-21 of each 28-day cycle plus venetoclax PO daily on Days 1-28 of each 28-day cycle, at the dose level identified in the safety run-in phase plus atezolizumab IV infusion at a fixed dose of 840 mg on Day 1 and Day 15 of each 28-day cycle. Treatment continued until disease progression, unacceptable toxicity, death, participant or physician decision to withdraw, or pregnancy, whichever occurred first.

Arm type	Experimental
Investigational medicinal product name	Cobimetinib
Investigational medicinal product code	
Other name	Cotellic
Pharmaceutical forms	Film-coated tablet
Routes of administration	Oral use

**Dosage and administration details:**

Cobimetinib was administered PO daily at a dose of 40 mg on Days 1-21.

Investigational medicinal product name	Atezolizumab
Investigational medicinal product code	
Other name	Tecentriq
Pharmaceutical forms	Infusion
Routes of administration	Intravenous use

**Dosage and administration details:**

Atezolizumab was administered by IV infusion at a dose of 840 mg on Days 1 and 15.

Investigational medicinal product name	Venetoclax
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Film-coated tablet
Routes of administration	Oral use

**Dosage and administration details:**

Venetoclax was administered PO daily at a dose of 800 mg on Days 1-28.

Treatment continued until disease progression, unacceptable toxicity, death, participant or physician decision to withdraw, or pregnancy, whichever occurred first.	

### Primary: Percentage of Participants With Adverse Events (AEs)

End point title	Percentage of Participants With Adverse Events (AEs) <sup>[1]</sup>
End point description: An AE was any untoward medical occurrence in a participant administered a pharmaceutical product and which did not necessarily have to have a causal relationship with the treatment. An AE was therefore any unfavourable and unintended sign (including an abnormal laboratory finding, for example), symptom, or disease temporally associated with the use of a pharmaceutical product, whether or not considered related to the pharmaceutical product. New or pre-existing conditions which worsened during the study were also considered AEs. The safety evaluable population included all participants who received any amount of study drug.	
End point type	Primary
End point timeframe: Randomization up to end of study (up to approximately 3 years, 7 months)	
Notes: [1] - No statistical analyses have been specified for this primary end point. It is expected there is at least one statistical analysis for each primary end point. Justification: No statistical analyses provided as no formal hypothesis testing was planned for this study.	

End point values	Safety Run-In: Cobimetinib + Venetoclax	Safety Run-In: Cobimetinib + Venetoclax + Atezolizumab	A: Cobimetinib	B: Cobimetinib + Venetoclax

## Statistical analyses

No statistical analyses for this end point

## Primary: Percentage of Participants With Overall Response Rate (ORR) as Determined by the Investigator Using International Myeloma Working Group (IMWG) Response Criteria

End point title	Percentage of Participants With Overall Response Rate (ORR) as Determined by the Investigator Using International Myeloma Working Group (IMWG) Response Criteria <sup>[2]</sup>
-----------------	---

End point description:

ORR was defined as a stringent complete response (sCR), complete response (CR), very good partial response (VGPR), or partial response (PR) and was analyzed in the safety evaluable population and in the biomarker-selected sub-populations of t(11;14) and RAS mutations. The safety evaluable population included all participants who received any amount of study drug. 9999 to 9999999 = no participants were included in the t(11;14) biomarker-selected population within this arm.

End point type	Primary
----------------	---------

End point timeframe:

From randomization to the first occurrence of disease progression or relapse or death from any cause, whichever occurs first (up to approximately 3 years, 7 months).

Notes:

[2] - No statistical analyses have been specified for this primary end point. It is expected there is at least one statistical analysis for each primary end point.

Justification: No statistical analyses provided as no formal hypothesis testing was planned for this study.

### Secondary: Duration of Response (DOR) as Determined by the Investigator Using IMWG Response Criteria

End point title	Duration of Response (DOR) as Determined by the Investigator Using IMWG Response Criteria <sup>[3]</sup>
-----------------	--

End point description:

DOR was applicable to participants who achieved at least a PR, and was measured from the first observation of PR or better to the time of disease progression. The safety evaluable population included all participants who received any amount of study drug.

9999999 = not estimable, could not be calculated due to too few events.

9.999999 to 9999999 = the 95% CI could not be calculated from the data of one participant.

End point type	Secondary
----------------	-----------

End point timeframe:

Time from the first observation of partial response (PR) to the time of disease progression (up to approximately 3 years, 7 months).

Notes:

[3] - The end point is not reporting statistics for all the arms in the baseline period. It is expected all the baseline period arms will be reported on when providing values for an end point on the baseline period.

Justification: In Arm A, there were no participants who achieved a response and hence why that arm is not presented.

End point values	Safety Run-In: Cobimetinib + Venetoclax	Safety Run-In: Cobimetinib + Venetoclax + Atezolizumab	B: Cobimetinib + Venetoclax	C: Cobimetinib + Venetoclax + Atezolizumab

## Adverse events

### Adverse events information

Timeframe for reporting adverse events:

Randomization up to end of study (up to approximately 3 years, 7 months)

Adverse event reporting additional description:

AEs were recorded for the safety-evaluable population, which included all participants who received any amount of study drug and analyzed according to the treatment arm they received.

Assessment type	Systematic
-----------------	------------

### Reporting groups

Reporting group title	Safety Run-In: Cobimetinib+Venetoclax
-----------------------	---------------------------------------

Reporting group description:

Participants received cobimetinib (on Day 1-21) plus venetoclax (on Day 1-28) at escalated doses, in 28-day cycles, to identify the dose level with acceptable safety.

Reporting group title	Safety Run-In: Cobimetinib+Venetoclax+Atezolizumab
-----------------------	--

Reporting group description:

Participants received cobimetinib (on Day 1-21) plus venetoclax (on Day 1-28) at escalated doses and atezolizumab (on Day 1 and Day 15) at a fixed dose of 840 mg IV, in 28-day cycles, to identify the dose level with acceptable safety.

Reporting group title	A: Cobimetinib
-----------------------	----------------

Reporting group description:

Participants received the standard single-agent cobimetinib dose of 60 milligrams (mg) (3 tablets of 20 mg each) orally (PO) daily on Days 1-21 of each 28-day cycle until disease progression. Upon progression, participants were allowed to receive treatment with cobimetinib and atezolizumab at the recommended Phase II dose of cobimetinib 60 mg PO on Days 1-21 plus atezolizumab intravenous (IV) infusion at a fixed dose of 840 mg on Day 1 and Day 15 of each 28-day cycle. Treatment continued until disease progression, unacceptable toxicity, death, participant or physician decision to withdraw, or pregnancy, whichever occurred first.

Reporting group title	B: Cobimetinib + Venetoclax
-----------------------	-----------------------------

Reporting group description:

Participants received cobimetinib PO daily on Days 1-21 of each 28-day cycle plus venetoclax PO daily on Days 1-28 of each 28-day cycle, at the dose level identified in the safety run-in phase. Treatment continued until disease progression, unacceptable toxicity, death, participant or physician decision to withdraw, or pregnancy, whichever occurred first.

Reporting group title	C: Cobimetinib + Venetoclax + Atezolizumab
-----------------------	--

Reporting group description:

Participants received cobimetinib PO daily on Days 1-21 of each 28-day cycle plus venetoclax PO daily on Days 1-28 of each 28-day cycle, at the dose level identified in the safety run-in phase plus atezolizumab IV infusion at a fixed dose of 840 mg on Day 1 and Day 15 of each 28-day cycle. Treatment continued until disease progression, unacceptable toxicity, death, participant or physician decision to withdraw, or pregnancy, whichever occurred first.

## More information

### Substantial protocol amendments (globally)

Were there any global substantial amendments to the protocol? Yes

Date	Amendment
10 August 2017	The following updates were made: 1) Safety data for cobimetinib plus venetoclax was updated; 2) Information was added regarding the Cobimetinib plus Venetoclax plus Atezolizumab Safety Run-In Cohort design; 3) Clarifications were made to the Definition of Evaluable Patients in the Safety Run-In Cohorts and the Determination of Sample Size; 4) Pregnancy testing was updated; 5) Instructions for recordings of participant vital signs and left ventricular dysfunction were updated.
02 March 2018	The following updates were made: 1) Clinical data for atezolizumab was updated; 2) Updated the potential risk associated with atezolizumab; 3) Guidelines for atezolizumab-related dose modification and treatment interruption or discontinuation were updated; 4) Guidelines for managing patients who experience atezolizumab-associated AEs was updated; 5) Appendix 8 was added to the protocol.
20 September 2018	The following updates were made: 1) The number of participants randomized to each treatment arm was modified; 2) Inclusion criteria was updated; 3) Prohibited therapies were updated; 4) The timing of the optional bone marrow biopsy was changed; 5) Instructions on participant withdrawal were modified; 6) Lists of risks for atezolizumab were revised; 7) The maximum time for interrupting atezolizumab treatment was changed; 8) AESIs were revised; 9) Clarification of reporting of events that occur after study drug initiation.
27 March 2019	The following updates were made: 1) Enrollment of new participants was put on hold and a decision to continue study treatment for participants already enrolled would be made on a case-by-case basis; 2) The protocol was updated with topline data from an ongoing study; 3) Language was added to clarify recommendations on the administration of certain vaccinations; 4) The list of permitted therapies was updated; 5) Guidelines for managing hematological toxicities was modified; 6) A section was added to the protocol to address the management of infective complications.
24 January 2020	The following updates were made: 1) Background information on atezolizumab was updated; 2) "Immune-related" was changed to "immune-mediated" when describing events associated with atezolizumab; 3) Clinical data for cobimetinib plus venetoclax was updated; 4) Language clarified that after withdrawal of consent for participation in the Research Biosample Repository (RBR), remaining samples would be destroyed or no longer linked to the participant; 5) Identified risks associated with cobimetinib were updated; 6) Cobimetinib safety risk data was updated; 7) Serious infection, an important risk for venetoclax was closely monitored across all indications; 8) The list of atezolizumab risks was updated; 9) Systemic immune activation was replaced by hemophagocytic lymphohistiocytosis and macrophage activation syndrome in the list of potential risks for atezolizumab. The management guidelines for systemic immune activation were replaced with management guidelines for hemophagocytic lymphohistiocytosis and macrophage activation syndrome; 10) AESIs were updated; 11) Language was revised as some site might not allow follow-up on partner pregnancies; 11) Language was updated that therapeutic or elective abortions were not considered AEs; 12) The atezolizumab AE management guidelines were revised.

18 February 2021	The following updates were made: 1) The list of approved indications for atezolizumab was updated; 2) Clarification for the use of investigational medicinal product accountability; 3) Immunosuppressive medications were removed from the prohibited therapy and added to the cautionary therapy for atezolizumab-treated participants; 4) Updates to the identified risks associated with cobimetinib; 5) The list of identified risks for atezolizumab was revised; 6) Guidelines for the management of atezolizumab-associated AEs and IRRs were revised; 7) The list of atezolizumab-associated AESIs was revised; 8) Language was added regarding female participants informing the investigator if they became pregnant; 9) Appendix 7 of the protocol was revised; 10) AE management guidelines for IRRs and CRS' were updated; 11) The management guidelines for HLH and MAS have been modified.

Notes:

## Interruptions (globally)

Were there any global interruptions to the trial? No

## Limitations and caveats

Limitations of the trial such as small numbers of subjects analysed or technical problems leading to unreliable data.

In March 2019, this study was placed on voluntary enrollment hold. In May 2019, after an informal efficacy review, the Sponsor decided not to remove the hold and discontinued further development of the combination.
