

Clinical trial results:

A Multicenter, Randomized, Double-Blind, Placebo-Controlled, Phase 3 Study to Evaluate the Efficacy and Safety of Baricitinib in Patients with Moderate to Severe Atopic Dermatitis

Summary

EudraCT number	2017-000871-10
Trial protocol	HU AT ES PL
Global end of trial date	12 December 2018

Results information

Result version number	v1 (current)
This version publication date	27 December 2019
First version publication date	27 December 2019

Trial information

Trial identification

Sponsor protocol code	I4V-MC-JAHM

Scientific contact	Available Mon - Fri 9 AM - 5 PM EST, Eli Lilly and Company, 1 8772854559,

Notes:

Paediatric regulatory details

Is trial part of an agreed paediatric investigation plan (PIP)	No
Does article 45 of REGULATION (EC) No 1901/2006 apply to this trial?	No
Does article 46 of REGULATION (EC) No 1901/2006 apply to this trial?	No

Notes:

Results analysis stage

Analysis stage	Final
Date of interim/final analysis	12 December 2018
Is this the analysis of the primary completion data?	No
Global end of trial reached?	Yes
Global end of trial date	12 December 2018
Was the trial ended prematurely?	No

Notes:

General information about the trial

Main objective of the trial:

The purpose of this study is to evaluate the efficacy and safety of baricitinib as monotherapy in participants with moderate to severe atopic dermatitis.

Protection of trial subjects:

This study was conducted in accordance with International Conference on Harmonization (ICH) Good Clinical Practice, and the principles of the Declaration of Helsinki, in addition to following the laws and regulations of the country or countries in which a study is conducted.

Background therapy: -

Evidence for comparator: -

Actual start date of recruitment	27 November 2017
Long term follow-up planned	No
Independent data monitoring committee (IDMC) involvement?	Yes

Notes:

Population of trial subjects

Subjects enrolled per country

Country: Number of subjects enrolled	Argentina: 67
Country: Number of subjects enrolled	Korea, Republic of: 55
Country: Number of subjects enrolled	Austria: 31
Country: Number of subjects enrolled	Hungary: 52
Country: Number of subjects enrolled	Japan: 112
Country: Number of subjects enrolled	Poland: 118
Country: Number of subjects enrolled	Israel: 34
Country: Number of subjects enrolled	Australia: 67
Country: Number of subjects enrolled	Switzerland: 25
Country: Number of subjects enrolled	Spain: 54
Worldwide total number of subjects	615
EEA total number of subjects	255

Notes:

Subjects enrolled per age group

In utero	0
Preterm newborn - gestational age < 37 wk	0

Newborns (0-27 days)	0
Infants and toddlers (28 days-23 months)	0
Children (2-11 years)	0
Adolescents (12-17 years)	0
Adults (18-64 years)	596
From 65 to 84 years	19
85 years and over	0

Subject disposition

Recruitment

Recruitment details:

Participants who completed double blind treatment phase had option to enter extension study I4V-MC-JAHN (NCT03334435).

Pre-assignment

Screening details:

NA

Period 1

Period 1 title	Overall Study (overall period)
Is this the baseline period?	Yes
Allocation method	Randomised - controlled
Blinding used	Double blind
Roles blinded	Investigator, Subject

Arms

Are arms mutually exclusive?	Yes
------------------------------	-----

Arm title	Placebo
------------------	---------

Arm description:

Placebo administered orally once daily.

Arm type	Placebo
Investigational medicinal product name	Placebo
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Tablet
Routes of administration	Oral use

Dosage and administration details:

Placebo administered orally once daily.

Arm title	1mg Baricitinib
------------------	-----------------

Arm description:

1 milligram (mg) Baricitinib administered orally once daily.

Arm type	Experimental
Investigational medicinal product name	Baricitinib
Investigational medicinal product code	
Other name	LY3009104
Pharmaceutical forms	Tablet
Routes of administration	Oral use

Dosage and administration details:

1mg Baricitinib administered orally once daily.

Arm title	2mg Baricitinib
------------------	-----------------

Arm description:

2mg Baricitinib administered orally once daily.

Arm type	Experimental
Investigational medicinal product name	Baricitinib
Investigational medicinal product code	
Other name	LY3009104
Pharmaceutical forms	Tablet
Routes of administration	Oral use

Dosage and administration details:

2mg Baricitinib administered orally once daily.

Arm title	4mg Baricitinib
Arm description: 4mg Baricitinib administered orally once daily.	
Arm type	Experimental
Investigational medicinal product name	Baricitinib
Investigational medicinal product code	
Other name	LY3009104
Pharmaceutical forms	Tablet
Routes of administration	Oral use

Dosage and administration details:

4mg Baricitinib administered orally once daily.

Number of subjects in period 1	Placebo	1mg Baricitinib	2mg Baricitinib
Started	244	125	123
Received at least one dose of study drug	244	124	123
Completed	225	115	113
Not completed	19	10	10
Consent withdrawn by subject	8	3	1

Reporting group description: 4mg Baricitinib administered orally once daily.	

Primary: Percentage of Participants Achieving Investigator's Global Assessment (IGA) of 0 or 1 with a ≥ 2 Point Improvement (Placebo, 2mg and 4 mg Baricitinib)

End point title	Percentage of Participants Achieving Investigator's Global Assessment (IGA) of 0 or 1 with a ≥ 2 Point Improvement (Placebo, 2mg and 4 mg Baricitinib) ^[1]
End point description: The IGA measures the investigator's global assessment of the participants overall severity of their atopic dermatitis (AD), based on a static, numeric 5-point scale from 0 (clear skin) to 4 (severe disease). The score is based on an overall assessment of the degree of erythema, papulation/induration, oozing/crusting, and lichenification.	
Analysis Population Description: All participants randomized to placebo, 2mg, or 4mg of study drug.	
End point type	Primary
End point timeframe: 16 Weeks	
Notes: [1] - The end point is not reporting statistics for all the arms in the baseline period. It is expected all the baseline period arms will be reported on when providing values for an end point on the baseline period. Justification: Per protocol, the primary outcome measure was to compare the response in participants who received the 2 mg and 4 mg doses of Baricitinib to the response of participants who received placebo.	

End point values	Placebo	2mg Baricitinib	4mg Baricitinib	
Subject group type	Reporting group	Reporting group	Reporting group

Secondary: Percentage of Participants Achieving Eczema Area and Severity Index 75 (EASI75)

End point title	Percentage of Participants Achieving Eczema Area and Severity Index 75 (EASI75)
-----------------	---

End point description:

The EASI assesses objective physician estimates of 2 dimensions of atopic dermatitis - disease extent and clinical signs affected: 0 = 0%; 1 = 1-9%; 2 = 10-29%; 3 = 30-49%; 4 = 50-69%; 5 = 70-89%; 6 = 90-100% and the severity of 4 clinical signs (1) erythema, (2) edema/papulation, (3) excoriation, and (4) lichenification each on a scale of 0 to 3 (0 = none, absent; 1 = mild; 2 = moderate; 3 = severe) at 4 body sites (head and neck, trunk, upper limbs, and lower limbs). Half scores are allowed between severities 1, 2 and 3. The final EASI score is obtained by weight-averaging these 4 scores and will range from 0 to 72 (severe). The EASI75 is defined as a $\geq 75\%$ improvement from baseline in the EASI score.

APD: All randomized participants.

Secondary: Percentage of Participants Achieving SCORing Atopic Dermatitis 75 (SCORAD75)

End point title	Percentage of Participants Achieving SCORing Atopic Dermatitis 75 (SCORAD75)
End point description:	
<p>The SCORAD index uses the rule of nines to assess disease extent and evaluates 6 clinical characteristics to determine disease severity: (1) erythema, (2) edema/papulation, (3) oozing/crusts, (4) excoriation, (5) lichenification, and (6) dryness on a scale of 0 to 3 (0=absence, 1=mild, 2=moderate, 3=severe). The SCORAD index also assesses subjective symptoms of pruritus and sleep loss with VAS where 0 is no itching or no trouble sleeping and 10 is unbearable itching or lot of trouble sleeping. These 3 aspects: extent of disease (A: 0-1-2), disease severity (B: 0-18), & subjective symptoms (C: 0-20) combine using $A/5 + 7*B/2 + C$ to give a maximum possible score of 103, where 0 = no disease and 103 = severe disease. The SCORAD75 responder is defined as a participant who achieves a $\geq 75\%$ improvement from baseline in the SCORAD score.</p> <p>APD: All randomized participants.</p>

Secondary: Percentage of Participants Achieving a 4-Point Improvement on the Itch Numeric Rating Scale (NRS)

End point title	Percentage of Participants Achieving a 4-Point Improvement on the Itch Numeric Rating Scale (NRS)
-----------------	---

End point description:

The Itch Numeric Rating Scale (NRS) is a participant-administered, 11-point horizontal scale anchored at 0 and 10, with 0 representing "no itch" and 10 representing "worst itch imaginable." Overall severity of a participants itching is indicated by selecting the number, using a daily diary, that best describes the worst level of itching in the past 24 hours.

APD: All randomized participants with a baseline Itch NRS score ≥ 4 .

Secondary: Change from Baseline in the Score of Item 2 of the Atopic Dermatitis Sleep Scale (ADSS)

End point title	Change from Baseline in the Score of Item 2 of the Atopic Dermatitis Sleep Scale (ADSS)
-----------------	---

End point description:

Atopic Dermatitis Sleep Scale (ADSS) is a 3-item, participant-administered questionnaire developed to assess the impact of itch on sleep including difficulty falling asleep, frequency of waking, and difficulty getting back to sleep last night. Item 2, frequency of waking last night is reported by selecting the number of times they woke up each night, ranging from 0 to 29 times. The ADSS is designed to be

completed daily, using a daily diary, with respondents thinking about sleep "last night." Each item is scored individually.

LS Means were calculated using a MMRM model with treatment, region, baseline disease severity (IGA), visit, and treatment-by-visit-interaction as fixed categorical effects and baseline and baseline-by- visit-interaction as fixed continuous effects.

End point type	Secondary
----------------	-----------

End point timeframe:

Baseline, 16 Weeks

APD: All randomized participants with a Week 16 ADSS Item 2 (frequency of waking) data.

Secondary: Change from Baseline in the Patient Global Impression of Severity—Atopic Dermatitis (PGI-S-AD) Score

End point title	Change from Baseline in the Patient Global Impression of Severity—Atopic Dermatitis (PGI-S-AD) Score
-----------------	--

End point description:

The PGI-S-AD asked the participant to evaluate the severity of the disease at that point in time on a single-item, 5-point scale, using a daily diary. The same category labels used in the Physician's Global Assessment was used for the PGI-S-AD, ie, "No symptoms (0)", "Very mild (1)", "mild (2)", "moderate (3)", "severe (4)".

LSMean were calculated using MMRM model with treatment, region, baseline disease severity (IGA), visit, & treatment-by-visit-interaction as fixed categorical effects. Baseline and baseline-by-visit-interaction as fixed continuous effects.

APD: All randomized participants with Week 16 PGI-S-AD data.

Secondary: Change from Baseline on the Hospital Anxiety Depression Scale (HADS)

End point title	Change from Baseline on the Hospital Anxiety Depression Scale (HADS)
-----------------	--

End point description:

The HADS is a participant-rated instrument used to assess both anxiety and depression. This instrument consists of 14 items questionnaire, each item is rated on a 4-point scale, giving maximum scores of 21 for anxiety and depression. Scores of 11 or more on either subscale are considered to be a significant 'case' of psychological morbidity, while scores of 8-10 represent 'borderline' and 0-7, 'normal'. LSMeans were calculated using MMRM model with treatment, region, baseline disease severity (IGA), visit, & treatment-by-visit-interaction as fixed categorical effects. Baseline and baseline-by-visit-interaction as fixed continuous effects.

Secondary: Change from Baseline on the Dermatology Life Quality Index (DLQI)

End point title	Change from Baseline on the Dermatology Life Quality Index
-----------------	--

End point description:

The DLQI is a simple, participant-administered, 10 question, validated, quality-of-life questionnaire that covers 6 domains: symptoms and feelings, daily activities, leisure, work and school, personal relationships, and treatment. The recall period of this scale is over the last "week." Response categories include "not at all," "a lot," and "very much," with corresponding scores of 1, 2, and 3, respectively, and unanswered ("not relevant") responses scored as "0." Totals range from 0 to 30 (less to more impairment), and a 4-point change from baseline is considered as the minimal clinically important difference threshold.

LSMean were calculated using MMRM model with treatment, region, baseline disease severity (IGA), visit, & treatment-by-visit-interaction as fixed categorical effects. Baseline and baseline-by-visit-interaction as fixed continuous effects.

APD: All randomized participants with week 16 DLQI data.

End point title	Change From Baseline on the European Quality of Life–5 Dimensions 5 Levels (EQ-5D-5L) Index Score United States and United Kingdom Algorithm
-----------------	--

End point description:

EQ-5D-5L is a 2-part measurement. The first part is comprised of the following 5 participant-reported dimensions: mobility, self-care, usual activities, pain/discomfort, and anxiety/depression. Each dimension has 5 levels: no problems, slight problems, moderate problems, severe problems, and extreme problems. The responses are used to derive the health state index scores using the United Kingdom (UK) algorithm, with scores ranging from -0.594 to 1, and the United States (US) algorithm, with scores ranging from -0.109 to 1. A higher score indicates better health state.

LSMean were calculated using MMRM model with treatment, region, baseline disease severity (IGA), visit, & treatment-by-visit-interaction as fixed categorical effects. Baseline and baseline-by-visit-interaction as fixed continuous effects.

Secondary: Percentage of Participants Achieving Investigator's Global Assessment (IGA) of 0 or 1 With a ≥ 2 Point Improvement

End point title	Percentage of Participants Achieving Investigator's Global Assessment (IGA) of 0 or 1 With a ≥ 2 Point Improvement
End point description:	
The IGA measures the investigator's global assessment of the participants overall severity of their AD, based on a static, numeric 5-point scale from 0 (clear skin) to 4 (severe disease). The score is based on an overall assessment of the degree of erythema, papulation/induration, oozing/crusting, and lichenification.	
APD: All randomized participants.	
End point type	Secondary
End point timeframe:	
4 Weeks	

End point values	Placebo	1mg Baricitinib	2mg Baricitinib	4mg Baricitinib

Adverse events

Adverse events information

Timeframe for reporting adverse events:

Baseline to end of study (Up to 20 weeks)

Adverse event reporting additional description:

All randomized participants who received at least one dose of study drug.

Assessment type	Systematic
