

## Clinical trial results:

### A Phase 2 Multicenter, Investigator-Blind, Subject-Blind, Placebo-Controlled Study of the Efficacy, Safety, and Pharmacokinetics of Bimekizumab in Subjects with Moderate to Severe Hidradenitis Suppurativa

#### Summary

EudraCT number	2017-000892-10
Trial protocol	DE BE DK GR
Global end of trial date	21 February 2019

#### Results information

Result version number	v1 (current)
This version publication date	07 March 2020
First version publication date	07 March 2020

#### Trial information

##### Trial identification

Sponsor protocol code	HS0001
-----------------------	--------

##### Additional study identifiers

ISRCTN number	-
ClinicalTrials.gov id (NCT number)	NCT03248531
WHO universal trial number (UTN)	-

Notes:

##### Sponsors

Sponsor organisation name	UCB Biopharma SRL
Sponsor organisation address	Allée de la Recherche 60, Brussels, Belgium, 1070
Public contact	Clin Trial Reg & Results Disclosure, UCB BIOSCIENCES GmbH, clinicaltrials@ucb.com
Scientific contact	Clin Trial Reg & Results Disclosure, UCB BIOSCIENCES GmbH, clinicaltrials@ucb.com

Notes:

##### Paediatric regulatory details

Is trial part of an agreed paediatric investigation plan (PIP)	No
Does article 45 of REGULATION (EC) No 1901/2006 apply to this trial?	No
Does article 46 of REGULATION (EC) No 1901/2006 apply to this trial?	No

Notes:

## Results analysis stage

Analysis stage	Final
Date of interim/final analysis	28 March 2019
Is this the analysis of the primary completion data?	No
Global end of trial reached?	Yes
Global end of trial date	21 February 2019
Was the trial ended prematurely?	No

Notes:

## General information about the trial

Main objective of the trial:

The primary objective of this study is to evaluate the efficacy of bimekizumab in subjects with moderate to severe Hidradenitis Suppurativa (HS).

Protection of trial subjects:

During the conduct of the study all participants were closely monitored.

Background therapy:

Subject agreed to daily use (and throughout the entirety of the study) of 1 of the following over-the-counter topical antiseptics on their HS lesions: chlorhexidine gluconate, triclosan, benzoyl peroxide, or dilute bleach in bathwater.

Concomitant use of oral antibiotic therapy for treatment of HS was allowed provided the dosing regimen (dose and frequency) had been stable for at least 4 consecutive weeks (28 days) prior to Baseline.

Evidence for comparator:

Adalimumab is the only approved medicinal product for the treatment of moderate to severe HS with an inadequate response to conventional systemic HS therapy (approved in Sep 2015).

Actual start date of recruitment	22 September 2017
Long term follow-up planned	No
Independent data monitoring committee (IDMC) involvement?	Yes

Notes:

## Population of trial subjects

### Subjects enrolled per country

Country: Number of subjects enrolled	Australia: 19
Country: Number of subjects enrolled	Belgium: 1
Country: Number of subjects enrolled	Denmark: 3
Country: Number of subjects enrolled	Germany: 8
Country: Number of subjects enrolled	Norway: 2
Country: Number of subjects enrolled	Russian Federation: 11
Country: Number of subjects enrolled	United States: 46
Worldwide total number of subjects	90
EEA total number of subjects	14

Notes:

### Subjects enrolled per age group

In utero	0
Preterm newborn - gestational age < 37	0

wk	
Newborns (0-27 days)	0
Infants and toddlers (28 days-23 months)	0
Children (2-11 years)	0
Adolescents (12-17 years)	0
Adults (18-64 years)	89
From 65 to 84 years	1
85 years and over	0

## Subject disposition

### Recruitment

Recruitment details:

The study started to enroll patients in September 2017 and concluded in February 2019.

### Pre-assignment

Screening details:

The study included a Screening Period ( $\geq 2$  weeks up to a maximum of 4 weeks prior to randomization), a Treatment Period (12 weeks), and a Safety Follow-Up (SFU) Period (20 weeks after the last dose of investigational medicinal product (IMP)).

Participant Flow refers to the Randomized Set.

### Period 1

Period 1 title	Overall Study (overall period)
Is this the baseline period?	Yes
Allocation method	Randomised - controlled
Blinding used	Double blind
Roles blinded	Subject, Investigator, Carer, Assessor

Blinding implementation details:

For reporting of this study, due to limitations of the drop-down list for blinding, the wording Double Blind was utilized instead of Investigator- and Subject-Blind.

### Arms

Are arms mutually exclusive?	Yes
<b>Arm title</b>	Placebo

Arm description:

Participants received several placebo applications to keep the blinding and as a control group.

Arm type	Placebo
Investigational medicinal product name	Placebo
Investigational medicinal product code	PBO
Other name	
Pharmaceutical forms	Solution for injection
Routes of administration	Subcutaneous use

Dosage and administration details:

Placebo will be provided for blinding and as a control group.

<b>Arm title</b>	Adalimumab
------------------	------------

Arm description:

Participants received one Adalimumab loading dose 1, one Adalimumab dose 2 application and several Adalimumab dose 3 applications.

Arm type	Active comparator
Investigational medicinal product name	Adalimumab
Investigational medicinal product code	
Other name	Humira®
Pharmaceutical forms	Solution for injection
Routes of administration	Subcutaneous use

Dosage and administration details:

Adalimumab in different dosages (dose 1, 2 and 3).

<b>Arm title</b>	Bimekizumab
------------------	-------------

Arm description:

Participants received one Bimekizumab loading dose 1 and several Bimekizumab dose 2 applications.

Arm type	Experimental
----------	--------------

Investigational medicinal product name	Bimekizumab
Investigational medicinal product code	UCB4940
Other name	
Pharmaceutical forms	Solution for injection
Routes of administration	Subcutaneous use

Dosage and administration details:

Bimekizumab in different dosages (dose 1 and 2).

<b>Number of subjects in period 1</b>	Placebo	Adalimumab	Bimekizumab
Started	22	22	46
Completed Week 12	19	18	42
Completed	18	17	38
Not completed	4	5	8
Consent withdrawn by subject	3	3	2
Adverse event, non-fatal	-	-	1
Lost to follow-up	1	-	5
Sponsor Request	-	2	-

## Baseline characteristics

### Reporting groups

Reporting group title	Placebo
Reporting group description: Participants received several placebo applications to keep the blinding and as a control group.	
Reporting group title	Adalimumab
Reporting group description: Participants received one Adalimumab loading dose 1, one Adalimumab dose 2 application and several Adalimumab dose 3 applications.	
Reporting group title	Bimekizumab
Reporting group description: Participants received one Bimekizumab loading dose 1 and several Bimekizumab dose 2 applications.	

Reporting group values	Placebo	Adalimumab	Bimekizumab
Number of subjects	22	22	46
Age categorical Units: Subjects			
<=18 years	0	0	2
Between 18 and 65 years	21	22	44
>=65 years	1	0	0
Age continuous Units: years			
arithmetic mean	40.7	31.0	37.4
standard deviation	± 12.5	± 9.2	± 11.9
Gender categorical Units: Subjects			
Male	7	4	16
Female	15	18	30

Reporting group values	Total		
Number of subjects	90		
Age categorical Units: Subjects			
<=18 years	2		
Between 18 and 65 years	87		
>=65 years	1		
Age continuous Units: years			
arithmetic mean			
standard deviation	-		
Gender categorical Units: Subjects			
Male	27		
Female	63		

## End points

### End points reporting groups

Reporting group title	Placebo
Reporting group description: Participants received several placebo applications to keep the blinding and as a control group.	
Reporting group title	Adalimumab
Reporting group description: Participants received one Adalimumab loading dose 1, one Adalimumab dose 2 application and several Adalimumab dose 3 applications.	
Reporting group title	Bimekizumab
Reporting group description: Participants received one Bimekizumab loading dose 1 and several Bimekizumab dose 2 applications.	
Subject analysis set title	Placebo (PPS)
Subject analysis set type	Per protocol
Subject analysis set description: Participants received several placebo applications to keep the blinding and as a control group, forming the Per-Protocol Set (PPS).	
Subject analysis set title	Adalimumab (PPS)
Subject analysis set type	Per protocol
Subject analysis set description: Participants received one Adalimumab loading dose 1, one Adalimumab dose 2 application and several Adalimumab dose 3 applications, forming the PPS.	
Subject analysis set title	Bimekizumab (PPS)
Subject analysis set type	Per protocol
Subject analysis set description: Participants received one Bimekizumab loading dose 1 and several Bimekizumab dose 2 applications, forming the PPS.	
Subject analysis set title	Bimekizumab (PK-PPS)
Subject analysis set type	Per protocol
Subject analysis set description: Participants received one Bimekizumab loading dose 1 and several Bimekizumab dose 2 applications, forming the Pharmacokinetic Per-Protocol Set (PK-PPS).	
Subject analysis set title	Placebo (SS)
Subject analysis set type	Safety analysis
Subject analysis set description: Participants received several placebo applications to keep the blinding and as a control group, forming the Safety Set (SS).	
Subject analysis set title	Adalimumab (SS)
Subject analysis set type	Safety analysis
Subject analysis set description: Participants received one Adalimumab loading dose 1, one Adalimumab dose 2 application and several Adalimumab dose 3 applications, forming the SS.	
Subject analysis set title	Bimekizumab (SS)
Subject analysis set type	Safety analysis
Subject analysis set description: Participants received one Bimekizumab loading dose 1 and several Bimekizumab dose 2 applications, forming the SS.	

**Primary: Percentage of subjects achieving clinical response as measured by Hidradenitis Suppurativa Clinical Response (HiSCR) at Week 12**

End point title	Percentage of subjects achieving clinical response as measured by Hidradenitis Suppurativa Clinical Response (HiSCR) at Week 12
-----------------	---

End point description:

HiSCR was defined as at least a 50 % reduction from Baseline in the total abscess and inflammatory nodule (AN) count, with no increase from Baseline in abscess or draining fistula count.

Missing data were handled using non-response imputation (NRI) methods.

End point type	Primary

## Statistical analyses

## Adverse events

### Adverse events information

Timeframe for reporting adverse events:

Adverse events were collected from Baseline (Day 1) until the Safety Follow-Up Visit (Week 30)

Assessment type	Non-systematic
-----------------	----------------

### Dictionary used

Dictionary name	MedDRA
-----------------	--------

Dictionary version	19.0
--------------------	------

### Reporting groups

Reporting group title	Placebo (SS)
-----------------------	--------------

Reporting group description:

Participants received several placebo applications to keep the blinding and as a control group, forming the Safety Set (SS).

Reporting group title	Adalimumab (SS)
-----------------------	-----------------

Reporting group description:

Participants received one Adalimumab loading dose 1, one Adalimumab dose 2 application and several Adalimumab dose 3 applications, forming the SS.

Reporting group title	Bimekizumab (SS)
-----------------------	------------------

Reporting group description:

Participants received one Bimekizumab loading dose 1 and several Bimekizumab dose 2 applications, forming the SS.

occurrences (all)	0	1	3
Musculoskeletal and connective tissue disorders			
Arthralgia			
subjects affected / exposed	1 / 21 (4.76%)	2 / 21 (9.52%)	1 / 46 (2.17%)
occurrences (all)	1	2	3

Infections and infestations Oral candidiasis subjects affected / exposed occurrences (all)	0 / 21 (0.00%) 0	1 / 21 (4.76%) 1	3 / 46 (6.52%) 4
Influenza subjects affected / exposed occurrences (all)	0 / 21 (0.00%) 0	3 / 21 (14.29%) 3	0 / 46 (0.00%) 0
Nasopharyngitis subjects affected / exposed occurrences (all)	0 / 21 (0.00%) 0	1 / 21 (4.76%) 1	3 / 46 (6.52%) 4
Upper respiratory tract infection subjects affected / exposed occurrences (all)	0 / 21 (0.00%) 0	2 / 21 (9.52%) 2	2 / 46 (4.35%) 2

## More information

### Substantial protocol amendments (globally)

Were there any global substantial amendments to the protocol? Yes

Date	Amendment
08 March 2018	<p>Protocol Amendment 1 was dated 08 Mar 2018. The purpose of this substantial amendment was to revise the withdrawal criteria to provide instructions for the management of study participants with newly diagnosed inflammatory bowel disease (IBD) or with IBD flares during the study. Other key changes included the following:</p> <p>The statistical analysis section of the protocol was also updated to include text describing the planned analysis of the primary efficacy variable, and text describing the planned interim analyses and sample size re-estimation was revised. The rationale for this was that the observed pattern of study participant recruitment was not as expected at the time of study planning. Consequently, an insufficient number of study participants would have completed the Week 12 visit and would be evaluable for response at the time of the first interim analysis. The risk of performing an analysis with a very small amount of data was that the estimates obtained from the analysis would be unstable and the risk of committing a Type II error would be inflated. To mitigate these risks it was decided to remove the formal futility and sample size re-estimation aspects from the first interim analysis.</p> <p>Additional changes included updates to study contact information; minor formatting corrections were also made.</p>

Notes:

---

### Interruptions (globally)

Were there any global interruptions to the trial? No

### Limitations and caveats

None reported
