Notes:

Paediatric regulatory details

Is trial part of an agreed paediatric investigation plan (PIP)	No
Does article 45 of REGULATION (EC) No 1901/2006 apply to this trial?	No
Does article 46 of REGULATION (EC) No 1901/2006 apply to this trial?	No

Notes:

Results analysis stage

Analysis stage	Final
Date of interim/final analysis	20 November 2020
Is this the analysis of the primary completion data?	Yes
Primary completion date	28 October 2020
Global end of trial reached?	Yes
Global end of trial date	28 October 2020
Was the trial ended prematurely?	No

Notes:

General information about the trial

Main objective of the trial:

The main objective of this study is to identify which one of three methods of treatment is the most effective in curing hepatitis C infection in people who inject drugs. The three methods we are testing are: 1. patients receiving their medication daily at their local pharmacy or needle exchange, 2. patients receiving their medication on a fortnightly basis from the needle exchange, 3. patients receiving their medication on a fortnightly basis from the needle exchange AND getting help from a psychologist to remember to take their medicine every day.

Protection of trial subjects:

Trial staff were trained to provide support if any participants became distressed during the trial visits.

Background therapy: -

Evidence for comparator: -

Actual start date of recruitment	02 October 2017
Long term follow-up planned	No
Independent data monitoring committee (IDMC) involvement?	No

Notes:

Population of trial subjects

Subjects enrolled per country

Country: Number of subjects enrolled	United Kingdom: 135
Worldwide total number of subjects	135
EEA total number of subjects	0

Notes:

Subjects enrolled per age group

In utero	0
Preterm newborn - gestational age < 37 wk	0
Newborns (0-27 days)	0
Infants and toddlers (28 days-23 months)	0
Children (2-11 years)	0
Adolescents (12-17 years)	0
Adults (18-64 years)	135
From 65 to 84 years	0
85 years and over	0

Subject disposition

Recruitment

Recruitment details:

135 people who inject drugs were recruited from injecting provision sites in Tayside, Scotland between January 2018 and November 2019

Pre-assignment

Screening details:

6 participants chose not to take after being consented. 129 were randomised.

Period 1

Period 1 title	Overall trial (overall period)
Is this the baseline period?	Yes
Allocation method	Randomised - controlled
Blinding used	Not blinded

Arms

Are arms mutually exclusive?	Yes
Arm title	Daily observed therapy

Arm description:

Patients with active hepatitis C infection genotype 1 will receive 12 weeks treatment with Zepatier at one tablet per day. Patients with active hepatitis C infection genotype 3 will receive 8 weeks treatment with Zepatier pill plus Sofosbuvir pill at one of each tablets per day. These tablets will be given to patients on a daily, observed basis by either the nurse or a community pharmacist.

Zepatier Pill: Drugs will be given to participants to treat hepatitis C infection

Sofosbuvir Pill: Drugs will be given along with Zepatier to participants to treat genotype 3 hepatitis C infection

Arm type	Experimental
Investigational medicinal product name	Zepatier
Investigational medicinal product code	EU/1/16/1119/001
Other name	
Pharmaceutical forms	Tablet
Routes of administration	Oral use

Dosage and administration details:

One daily for either 12 weeks (Genotype 1 HCV infection) or 8 weeks (Genotype 3 infection)

Investigational medicinal product name	Sovaldi
Investigational medicinal product code	EU/1/13/894/001
Other name	
Pharmaceutical forms	Tablet
Routes of administration	Oral use

Dosage and administration details:

One per day for 8 weeks (Genotype 3 HCV infection only)

Arm title	Fortnightly Pick-up
------------------	---------------------

Arm description:

Arm title	Fortnightly Pick-up with Psych intervention
------------------	---

Arm description:

Patients with active hepatitis C infection genotype 1 will receive 12 weeks treatment with Zepatier at one tablet per day. Patients with active hepatitis C infection genotype 3 will receive 8 weeks treatment with Zepatier pill plus Sofosbuvir pill at one of each tablets per day. These tablets will be given to patients on a fortnightly basis by the nurse. In addition, this group will receive a one-off interview with the researcher to complete a psychological intervention designed to improve adherence to the medication regimen.

Zepatier Pill: Drugs will be given to participants to treat hepatitis C infection

Psychological intervention: Participants randomised to fortnightly pick-up with psychological intervention will have an interview with the study nurse designed to aid their compliance with the drug regimen.

During the intervention participants will be guided by their trial nurse in the completion of a personalised booklet, "Hepatitis C and Me". The booklet uses the principles of n

Number of subjects in period 1 ^[1]	Daily observed therapy	Fortnightly Pick-up	Fortnightly Pick-up with Psych intervention
Started	39	42	47
Completed	33	37	40
Not completed	6	5	7
Adverse event, serious fatal	1	1	1
Consent withdrawn by subject	3	3	4

Protocol deviation	2	1	2
--------------------	---	---	---

Notes:

[1] - The number of subjects reported to be in the baseline period are not the same as the worldwide number enrolled in the trial. It is expected that these numbers will be the same.

Justification: 135 participants were consented to take part in the trial. 129 were randomised because 6 participants opted not to take part after consent. One individual who was randomised was ineligible and so not part of the analysis.

Primary: Comparison of Sustained Viral Response at 12 Weeks Post Treatment (SVR12) in the Three Treatment Groups

End point title	Comparison of Sustained Viral Response at 12 Weeks Post Treatment (SVR12) in the Three Treatment Groups
End point description: SVR12 was measured by PCR test to measure viral load of hepatitis c virus (HCV) in participant's blood at least 12 weeks after end of treatment. A viral load of less than 10IU/ml indicates no active infection and SVR12 has been achieved.	
End point type	Primary
End point timeframe: Measured at 12 weeks post end of treatment

Adverse events

Adverse events information

Timeframe for reporting adverse events:

Adverse events were collected for each participant while they were on the trial from consent until final data collection (SVR12). Trial contained active participants for a period of 31 months.

Adverse event reporting additional description:

Information about adverse events was collected when participants attended the injecting equipment provision sites for injecting equipment and followup.

Recorded but not reported as Serious Adverse Events:

Death or hospitalisation for assault or accidental injury

Hospitalisation for abscesses due to drugs use

Hospitalisation for wound management

Assessment type	Non-systematic
