

Clinical trial results:

A phase IIb study to determine the safety and efficacy of candidate INfluenza Vaccine MVA-NP+M1 in combination with licensed InaCTivated inflUenza vaccine in adultS aged 65 years and above

Summary

EudraCT number	2017-001103-77
Trial protocol	GB
Global end of trial date	31 October 2018

Results information

Result version number	v1 (current)
This version publication date	11 November 2019
First version publication date	11 November 2019

Notes:

Paediatric regulatory details

Is trial part of an agreed paediatric investigation plan (PIP)	No
Does article 45 of REGULATION (EC) No 1901/2006 apply to this trial?	No
Does article 46 of REGULATION (EC) No 1901/2006 apply to this trial?	No

Notes:

Results analysis stage

Analysis stage	Final
Date of interim/final analysis	20 August 2019
Is this the analysis of the primary completion data?	Yes
Primary completion date	20 August 2018
Global end of trial reached?	Yes
Global end of trial date	31 October 2018
Was the trial ended prematurely?	Yes

Notes:

General information about the trial

Main objective of the trial:

To assess the efficacy of MVA-NP+M1 in combination with licensed inactivated influenza vaccine in adults ≥ 65 years.

Protection of trial subjects:

standard procedures for emergency care were followed for any adverse events if clinically needed. The study also incorporated stopping rules and IDMC reviews at pre-defined time points.

Background therapy:

annual licensed QIV influenza vaccine

Evidence for comparator: -

Actual start date of recruitment	29 September 2017
Long term follow-up planned	No
Independent data monitoring committee (IDMC) involvement?	Yes

Notes:

Population of trial subjects

Subjects enrolled per country

Country: Number of subjects enrolled	United Kingdom: 862
Worldwide total number of subjects	862
EEA total number of subjects	862

Notes:

Subjects enrolled per age group

In utero	0
Preterm newborn - gestational age < 37 wk	0
Newborns (0-27 days)	0
Infants and toddlers (28 days-23 months)	0
Children (2-11 years)	0
Adolescents (12-17 years)	0
Adults (18-64 years)	0
From 65 to 84 years	862
85 years and over	0

Subject disposition

Recruitment

Recruitment details:

participants aged 65 years or over who were eligible for the annual seasonal influenza vaccine were approached after screening by their General Practitioner. If interest was obtained, they were brought into their GP practice for screening, consenting and vaccination on the same day. They were then sent home with a diary card.

Pre-assignment

Screening details: -

Pre-assignment period milestones

Number of subjects started	1020 ^[1]
Number of subjects completed	862

Pre-assignment subject non-completion reasons

Reason: Number of subjects	On anti-coagulants: 2
Reason: Number of subjects	Did not attend appointment: 77
Reason: Number of subjects	History of anaphylaxis: 2
Reason: Number of subjects	Attended visit and changed mind: 44
Reason: Number of subjects	Other medical reason: 2
Reason: Number of subjects	Involved in other trial: 1
Reason: Number of subjects	Previous allergic reaction to vaccine: 1
Reason: Number of subjects	Unknown: 20
Reason: Number of subjects	Physician decision: 9

Notes:

[1] - The number of subjects reported to have started the pre-assignment period are not the same as the worldwide number enrolled in the trial. It is expected that these numbers will be the same.

Justification: 1020 people screened and invited to participate, only 862 decided or were eligible to participate.

Period 1

Period 1 title	Enrolment
Is this the baseline period?	Yes
Allocation method	Randomised - controlled
Blinding used	Single blind ^[2]
Roles blinded	Subject, Investigator, Carer, Assessor

Arms

Are arms mutually exclusive?	Yes
Arm title	Active

Arm description:

MVA-NP+M1 plus seasonal influenza vaccine

Arm type	Experimental
Investigational medicinal product name	MVA-NP+M1
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Solution for injection
Routes of administration	Intramuscular use

Dosage and administration details:

MVA dose 1.5x10⁸ pfu given into deltoid muscle

Investigational medicinal product name	Quadrivalent Influenza Vaccine
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Solution for injection in pre-filled syringe
Routes of administration	Intramuscular use

Dosage and administration details:

Influenza virus (inactivated, split) of the following strains*:

Per 0.5 ml dose

* propagated in fertilised hens' eggs from healthy chicken flocks

** haemagglutinin

Arm title	Placebo
------------------	---------

Arm description:

0.9% Saline placebo and seasonal influenza vaccine

Arm type	Placebo
Investigational medicinal product name	saline
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Solution for injection
Routes of administration	Intramuscular use

Dosage and administration details:

0.9% saline 0.5mL given into deltoid muscle

Investigational medicinal product name	Quadrivalent Influenza Vaccine
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Solution for injection in pre-filled syringe
Routes of administration	Intramuscular use

Dosage and administration details:

Each dose was 0.5ml and administered via intramuscular injection

Notes:

[2] - The number of roles blinded appears inconsistent with a single blinded trial. It is expected that there will be one role blinded in a single blind trial.

Justification: Due to the appearance of MVA it was not possible to conduct a double blind trial, however, to maintain as much blind as possible all study roles that could be kept blind were as shown here.

Number of subjects in period 1	Active	Placebo
Started	432	430
Completed	431	429
Not completed	1	1
Consent withdrawn by subject	1	-
ineligible	-	1

Period 2

Period 2 title	Vaccination
Is this the baseline period?	No
Allocation method	Randomised - controlled
Blinding used	Single blind ^[3]
Roles blinded	Subject, Investigator, Carer, Assessor

Arms

Are arms mutually exclusive?	Yes
Arm title	Active

Arm description:

MVA-NP+M1 plus seasonal influenza vaccine

Arm type	Experimental

Other name	
Pharmaceutical forms	Solution for injection
Routes of administration	Intramuscular use

Dosage and administration details:

0.9% saline 0.5mL given into deltoid muscle

Investigational medicinal product name	Quadrivalent Influenza Vaccine
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Solution for injection in pre-filled syringe
Routes of administration	Intramuscular use

Dosage and administration details:

Each dose was 0.5ml and administered via intramuscular injection

Notes:

[3] - The number of roles blinded appears inconsistent with a single blinded trial. It is expected that there will be one role blinded in a single blind trial.

Justification: Due to the appearance of MVA it was not possible to conduct a double blind trial, however, to maintain as much blind as possible all study roles that could be kept blind were as shown here.

Number of subjects in period 2	Active	Placebo
Started	431	429
Completed	420	426
Not completed	11	3
Consent withdrawn by subject	3	-
unknown reason	1	1
non adherence	7	2

Period 3

Period 3 title	Diary Card Completion
Is this the baseline period?	No
Allocation method	Randomised - controlled
Blinding used	Single blind ^[4]
Roles blinded	Subject, Investigator, Carer, Assessor

Arms

Are arms mutually exclusive?	Yes
Arm title	Active

More information

Substantial protocol amendments (globally)

Were there any global substantial amendments to the protocol? Yes

Date	Amendment
13 November 2017	Sponsor Address 24 Hour Safety Hotline number and safety email Treatment duration and follow-up duration ILI definition Clarification of trial design for immunology cohort Date to start recording their illness diary cards Criteria for postponement of vaccination. Details of randomisation for immunology cohort Randomisation details not recorded in eCRF Illness reporting and safety follow-up – details of ILI symptoms given here. Medical Notes Review includes: chest imaging results when available Deleted: Guidelines for assessing the relationship of vaccine administration to an AE Start date for data analysis Primary Outcome definition Interim analysis: to include after the first 100 participants have been randomised
27 March 2018	Updated information on previous clinical use of MVA-NP+M1. Added laboratory confirmed influenza as a secondary trial endpoint. Addition of nasal swab procedure to collect laboratory confirmed influenza secondary endpoint Clarifications on secondary endpoints and immunology endpoints. Clarifications on trial design, AE reporting and causality assessment procedures Updated list of solicited AEs and ILI symptoms recorded Updated safety reporting information: GP consultations due to respiratory illness only, collected from week 5 onward. Previously scheduled elective procedures will not be reported as SAEs. Clarification of which investigators will be blinded to group allocation. Clarifications on study procedures for data collection on defined endpoints. Updated compensation amount to reflect additional screening visit needed for participants recruited into the Immunology Cohort via general advertisements. Increased window from 90 to 120 days between screening and vaccination visit for participants recruited via general advertisements Update clarification of the statistical analysis of ILI

Notes:

Interruptions (globally)

Were there any global interruptions to the trial? No

Limitations and caveats

None reported
