

Clinical trial results:

A Phase IV, 12-week, randomised, double-blind, triple dummy study to compare single inhaler triple therapy, fluticasone furoate/umeclidinium/vilanterol (FF/UMEC/VI) with multiple inhaler therapy (budesonide/formoterol plus tiotropium) based on lung function and symptoms in participants with chronic obstructive pulmonary disease

Summary

EudraCT number	2017-001150-33
Trial protocol	CZ DE PT
Global end of trial date	18 March 2019

Notes:

Paediatric regulatory details

Is trial part of an agreed paediatric investigation plan (PIP)	No
Does article 45 of REGULATION (EC) No 1901/2006 apply to this trial?	No
Does article 46 of REGULATION (EC) No 1901/2006 apply to this trial?	No

Notes:

Results analysis stage

Analysis stage	Final
Date of interim/final analysis	24 May 2019
Is this the analysis of the primary completion data?	No
Global end of trial reached?	Yes
Global end of trial date	18 March 2019
Was the trial ended prematurely?	No

Notes:

General information about the trial

Main objective of the trial:

To evaluate the effects of single inhaler triple therapy (FF/UMEC/VI) compared to multiple inhaler triple combination therapy with budesonide/formoterol plus tiotropium after 12 weeks of treatment on lung function

Protection of trial subjects:

Not Applicable

Background therapy: -

Evidence for comparator: -

Actual start date of recruitment	25 June 2018
Long term follow-up planned	No
Independent data monitoring committee (IDMC) involvement?	No

Notes:

Population of trial subjects

Subjects enrolled per country

Country: Number of subjects enrolled	Czech Republic: 59
Country: Number of subjects enrolled	Germany: 91
Country: Number of subjects enrolled	United States: 582
Worldwide total number of subjects	732
EEA total number of subjects	150

Notes:

Subjects enrolled per age group

In utero	0
Preterm newborn - gestational age < 37 wk	0
Newborns (0-27 days)	0
Infants and toddlers (28 days-23 months)	0
Children (2-11 years)	0
Adolescents (12-17 years)	0
Adults (18-64 years)	344
From 65 to 84 years	380
85 years and over	8

Subject disposition

Recruitment

Recruitment details:

This was a randomized, multicenter, double blind, parallel group study where participants with chronic obstructive pulmonary disease (COPD) were randomized to receive either fluticasone furoate/umeclidinium/vilanterol or budesonide/formoterol plus tiotropium in a 1:1 ratio. The study was conducted across 60 centers in 3 countries.

Pre-assignment

Screening details:

A total of 1120 participants were screened in the study, of which 289 participants failed during screening. Of the 831 participants who entered the run-in period, 99 participants were run-in failures. A total of 732 participants were randomized and received randomized treatment.

Period 1

Period 1 title	Overall Study (overall period)
Is this the baseline period?	Yes
Allocation method	Randomised - controlled
Blinding used	Double blind
Roles blinded	Subject, Investigator, Monitor, Carer, Data analyst, Assessor

Arms

Are arms mutually exclusive?	Yes
Arm title	Fluticasone furoate/Umeclidinium/Vilanterol 100/62.5/25 mcg

Arm description:

Participants received fluticasone furoate/umeclidinium/vilanterol (FF/UMEC/VI) 100/62.5/25 microgram (mcg) via the ELLIPTA (once daily in the morning) plus placebo to match budesonide/formoterol (BUD/FOR) via metered dose inhaler (MDI) (two inhalations twice daily) plus placebo to match tiotropium (TIO) via HandiHaler (once daily in the morning) for 84 days. Participants received albuterol/salbutamol as rescue medication during conduct of the study, if required.

Arm type	Experimental
Investigational medicinal product name	Fluticasone furoate/Umeclidinium/Vilanterol
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Inhalation powder, pre-dispensed
Routes of administration	Inhalation use

Dosage and administration details:

Fluticasone furoate/Umeclidinium/Vilanterol (100/62.5/25 mcg) was available as dry white powder to be administered via ELLIPTA once daily in the morning.

Investigational medicinal product name	Placebo matching Budesonide/Formoterol
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Pressurised inhalation, suspension
Routes of administration	Inhalation use

Dosage and administration details:

Participants received two inhalations of placebo matching Budesonide/Formoterol via MDI twice daily.

Investigational medicinal product name	Placebo matching Tiotropium
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Inhalation powder
Routes of administration	Inhalation use

Dosage and administration details:

Placebo matching tiotropium was available as hard gelatin capsule containing lactose. Participants received placebo matching tiotropium once daily in the morning via HandiHaler device.

Investigational medicinal product name	Albuterol/salbutamol
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Inhalation powder
Routes of administration	Inhalation use

Dosage and administration details:

Participants received short-acting Albuterol/Salbutamol as-rescue medication during the study period, if required.

Arm title	Budesonide/formoterol 320/9 mcg plus tiotropium 18 mcg
------------------	--

Arm description:

Participants received two inhalations of budesonide/formoterol 160/4.5 mcg via MDI in the morning and two inhalations in the evening (total dose of 320/9 mcg twice daily) plus tiotropium 18 mcg via HandiHaler (once daily in the morning) plus placebo to match fluticasone furoate/umeclidinium/vilanterol via the ELLIPTA (once daily in the morning) for 84 days. Participants received albuterol/salbutamol as rescue medication during conduct of the study, if required.

Arm type	Active comparator
Investigational medicinal product name	Budesonide/Formoterol
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Pressurised inhalation, suspension
Routes of administration	Inhalation use

Dosage and administration details:

Budesonide/Formoterol was available as suspension for inhalation. Participants received two inhalations of Budesonide/Formoterol (320/9 mcg) via MDI twice daily.

Investigational medicinal product name	Placebo matching Fluticasone furoate/Umeclidinium/Vilanterol
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Inhalation powder, pre-dispensed
Routes of administration	Inhalation use

Dosage and administration details:

Placebo matching Fluticasone furoate/Umeclidinium/Vilanterol was available as dry white powder to be administered via ELLIPTA once daily in the morning.

Investigational medicinal product name	Tiotropium
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Inhalation powder
Routes of administration	Inhalation use

Dosage and administration details:

Tiotropium was available as a hard gelatin capsule containing 18 mcg of tiotropium bromide blended with lactose. Participants received tiotropium (18 mcg) once daily in the morning via HandiHaler device.

Investigational medicinal product name	Albuterol/salbutamol
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Inhalation powder
Routes of administration	Inhalation use

Dosage and administration details:

Participants received short-acting Albuterol/Salbutamol as-rescue medication during the study period, if required.

Primary: Weighted mean change from Baseline in forced expiratory volume in 1 second (FEV1) over 0-24 hours at Week 12 for modified per protocol (mPP) population

End point title	Weighted mean change from Baseline in forced expiratory volume in 1 second (FEV1) over 0-24 hours at Week 12 for modified per protocol (mPP) population
-----------------	---

End point description:

FEV1 is the maximum amount of air that can be forced out in 1 second after taking a deep breath. Serial FEV1 assessments were performed at multiple time points (-30, -5 minutes[m] pre-dose and 5m, 15m, 30m, 1 hour[h], 3h, 6h, 12h, 15h, 21h, 23h and 24h post-dose) at Week 12. The weighted mean was derived by calculating the area under the FEV1 time curve (AUC) over the actual time of assessment relative to the time of dosing using the trapezoidal rule, and then dividing the value by the time interval over which the AUC was calculated. Baseline FEV1 is average of the two FEV1 measurements made at 30m and 5m pre-dose on Day 1. Weighted mean change from Baseline was calculated by subtracting post-dose weighted mean FEV1 from Baseline FEV1. mPP Population included participants in Intent-to-Treat (ITT) population who do not have protocol deviation of not meeting eligibility or randomization criteria. Only those participants with data available at the specified time points were analyzed.

Notes:

[6] - The analysis was performed using mixed model repeated measures analysis, which included covariates of Baseline FEV1, geographical region, treatment, visit, visit by treatment and visit by Baseline interaction.

Secondary: Change from Baseline in trough FEV1 on Day 2, Day 28, Day 84 and Day 85

End point title	Change from Baseline in trough FEV1 on Day 2, Day 28, Day 84 and Day 85
End point description:	
FEV1 is an important measure of pulmonary function and is the maximum amount of air that can be forced out in one second after taking a deep breath. FEV1 was measured using spirometry. For Day 2 and Day 85, trough FEV1 was defined as the mean of the 23-hour and 24-hour serial spirometry FEV1 measurements. For Day 28 and Day 84, trough FEV1 was defined as the average of the pre-dose FEV1 measurements recorded before the morning dose of randomized study treatment. Change from Baseline in trough FEV1 was calculated by subtracting post-dose trough FEV1 value from Baseline FEV1, where Baseline FEV1 is the average of the two FEV1 measurements made at 30 minutes and 5 minutes pre-dose on Day 1. The treatment effect to be estimated for trough FEV1 was hypothetical effect if all participants stayed on their randomized study treatment. Only those participants with data available at the specified time points were analyzed (represented by n= X in the category titles).

Reporting group description:

Participants received fluticasone furoate/umeclidinium/vilanterol (FF/UMEC/VI) 100/62.5/25 microgram (mcg) via the ELLIPTA (once daily in the morning) plus placebo to match budesonide/formoterol (BUD/FOR) via metered dose inhaler (MDI) (two inhalations twice daily) plus placebo to match tiotropium (TIO) via HandiHaler (once daily in the morning) for 84 days. Participants received albuterol/salbutamol as rescue medication during conduct of the study, if required.

Serious adverse events	Budesonide/formoterol 320/9 mcg plus tiotropium 18 mcg	Fluticasone furoate/Umeclidinium/Vilanterol 100/62.5/25 mcg	
Total subjects affected by serious adverse events			
subjects affected / exposed	20 / 366 (5.46%)	16 / 366 (4.37%)	
number of deaths (all causes)	2	0	
number of deaths resulting from adverse events			
Neoplasms benign, malignant and unspecified (incl cysts and polyps)			
Lung adenocarcinoma			
subjects affected / exposed	1 / 366 (0.27%)	0 / 366 (0.00%)	
occurrences causally related to treatment / all	0 / 1	0 / 0	
deaths causally related to treatment / all	0 / 1	0 / 0	
Squamous cell carcinoma of lung			
subjects affected / exposed	1 / 366 (0.27%)	0 / 366 (0.00%)	
occurrences causally related to treatment / all	0 / 1	0 / 0	
deaths causally related to treatment / all	0 / 0	0 / 0	

Vulval cancer stage 0			
subjects affected / exposed	0 / 366 (0.00%)	1 / 366 (0.27%)	
occurrences causally related to treatment / all	0 / 0	0 / 1	
deaths causally related to treatment / all	0 / 0	0 / 0	
Injury, poisoning and procedural complications			
Femur fracture			
subjects affected / exposed	0 / 366 (0.00%)	1 / 366 (0.27%)	
occurrences causally related to treatment / all	0 / 0	0 / 1	
deaths causally related to treatment / all	0 / 0	0 / 0	
Fracture displacement			
subjects affected / exposed	0 / 366 (0.00%)	1 / 366 (0.27%)	
occurrences causally related to treatment / all	0 / 0	0 / 1	
deaths causally related to treatment / all	0 / 0	0 / 0	
Meniscus injury			
subjects affected / exposed	1 / 366 (0.27%)	0 / 366 (0.00%)	
occurrences causally related to treatment / all	0 / 1	0 / 0	
deaths causally related to treatment / all	0 / 0	0 / 0	
Muscle rupture			
subjects affected / exposed	1 / 366 (0.27%)	0 / 366 (0.00%)	
occurrences causally related to treatment / all	0 / 1	0 / 0	
deaths causally related to treatment / all	0 / 0	0 / 0	
Cardiac disorders			
Acute myocardial infarction			
subjects affected / exposed	0 / 366 (0.00%)	1 / 366 (0.27%)	
occurrences causally related to treatment / all	0 / 0	0 / 1	
deaths causally related to treatment / all	0 / 0	0 / 0	
Angina pectoris			
subjects affected / exposed	1 / 366 (0.27%)	0 / 366 (0.00%)	
occurrences causally related to treatment / all	0 / 1	0 / 0	
deaths causally related to treatment / all	0 / 0	0 / 0	
Atrial fibrillation			
subjects affected / exposed	1 / 366 (0.27%)	0 / 366 (0.00%)	
occurrences causally related to treatment / all	1 / 1	0 / 0	
deaths causally related to treatment / all	0 / 0	0 / 0	

Cardiac failure congestive subjects affected / exposed	0 / 366 (0.00%)	1 / 366 (0.27%)	
occurrences causally related to treatment / all	0 / 0	0 / 1	
deaths causally related to treatment / all	0 / 0	0 / 0	
Myocardial infarction subjects affected / exposed	0 / 366 (0.00%)	1 / 366 (0.27%)	
occurrences causally related to treatment / all	0 / 0	0 / 1	
deaths causally related to treatment / all	0 / 0	0 / 0	
Stress cardiomyopathy subjects affected / exposed	1 / 366 (0.27%)	0 / 366 (0.00%)	
occurrences causally related to treatment / all	0 / 1	0 / 0	
deaths causally related to treatment / all	0 / 0	0 / 0

occurrences causally related to treatment / all	0 / 0	0 / 1	
deaths causally related to treatment / all	0 / 0	0 / 0	
Infections and infestations			
Appendicitis			
subjects affected / exposed	1 / 366 (0.27%)	0 / 366 (0.00%)	
occurrences causally related to treatment / all	0 / 1	0 / 0	
deaths causally related to treatment / all	0 / 0	0 / 0	
Cellulitis			
subjects affected / exposed	1 / 366 (0.27%)	0 / 366 (0.00%)	
occurrences causally related to treatment / all	0 / 1	0 / 0	
deaths causally related to treatment / all	0 / 0	0 / 0	
Influenza			
subjects affected / exposed	0 / 366 (0.00%)	1 / 366 (0.27%)	
occurrences causally related to treatment / all	0 / 0	0 / 1	
deaths causally related to treatment / all	0 / 0	0 / 0	
Parainfluenzae virus infection			
subjects affected / exposed	0 / 366 (0.00%)	1 / 366 (0.27%)	
occurrences causally related to treatment / all	0 / 0	0 / 1	
deaths causally related to treatment / all	0 / 0	0 / 0	
Pneumonia			

subjects affected / exposed	1 / 366 (0.27%)	1 / 366 (0.27%)	
occurrences causally related to treatment / all	0 / 1	0 / 1	
deaths causally related to treatment / all	0 / 0	0 / 0	
Sepsis			
subjects affected / exposed	0 / 366 (0.00%)	1 / 366 (0.27%)	
occurrences causally related to treatment / all	0 / 0	0 / 1	
deaths causally related to treatment / all	0 / 0	0 / 0	
Urinary tract infection			
subjects affected / exposed	0 / 366 (0.00%)	1 / 366 (0.27%)	
occurrences causally related to treatment / all	0 / 0	0 / 1	
deaths causally related to treatment / all	0 / 0	0 / 0	

Frequency threshold for reporting non-serious adverse events: 3 %

Non-serious adverse events	Budesonide/formoterol 320/9 mcg plus tiotropium 18 mcg	Fluticasone furoate/Umeclidinium/Vilanterol 100/62.5/25 mcg	
Total subjects affected by non-serious adverse events			
subjects affected / exposed	27 / 366 (7.38%)	20 / 366 (5.46%)	
Nervous system disorders			
Headache			
subjects affected / exposed	8 / 366 (2.19%)	13 / 366 (3.55%)	
occurrences (all)	10	16	
Infections and infestations			
Nasopharyngitis			
subjects affected / exposed	19 / 366 (5.19%)	7 / 366 (1.91%)	
occurrences (all)	19	8	

More information

Substantial protocol amendments (globally)

Were there any global substantial amendments to the protocol? Yes

Date	Amendment
09 November 2017	Amendment 1: This amendment was required as the incorrect EudraCT number was provided in the Regulator Agency Identifying Number(s) section on the title page, in error. In addition, the physical form of Symbicort and matching placebo was reported as a solution for inhalation, which is incorrect, the correct physical form is a suspension for inhalation. An additional footnote was added to the Schedule of Activities, to provide clarity on the collection of trough FEV1 spirometry on Day 28.
17 July 2018	Amendment 2: This amendment was required to update the QT interval corrected for heart rate (QTc) stopping criteria to that which was used in the Phase III Trelegy registration studies. In addition, a section describing Smoking Cessation Counselling had been added as does a corresponding assessment at the end of study (Visit 4). Clarified that it is preferable to have the participants stay at the clinic or approved facility during the serial spirometry assessments. Clarified that run-in medication will be collected at Visit 2. Correction made (reference section) regarding prohibited medications within a specified time interval during pre-screening and prior to Visit 1. Also, wording regarding suggested order for assessments and procedures had been added to the end of the Schedule of Activities (SoA) section. Removed reference to Fridericia formula in calculation of QTc. Clarification regarding collecting the Chronic Obstructive Pulmonary Disease (COPD) Assessment Test (CAT) assessment questionnaire prior to the St. George's Respiratory Questionnaire for COPD participants (SGRQ-C) had also been provided along with clarification that vital signs should be collected before the electrocardiogram (ECG) and prior to spirometry. Corrected reporting time regarding pregnancy. Routine urinalysis assessment has been deleted as this will not be collected during the study. Finally, added wording to Genetics Appendix regarding withdraw process and sample destruction process.

Notes:

Interruptions (globally)

Were there any global interruptions to the trial? No

Limitations and caveats

None reported
