

Clinical trial results:

A Multicenter, Randomized, Double-Blind, Placebo-Controlled Induction Study of the Efficacy and Safety of Upadacitinib (ABT-494) in Subjects With Moderately to Severely Active Crohn's Disease Who Have Inadequately Responded to or Are Intolerant to Biologic Therapy

Paediatric regulatory details

Is trial part of an agreed paediatric investigation plan (PIP)	No
Does article 45 of REGULATION (EC) No 1901/2006 apply to this trial?	No
Does article 46 of REGULATION (EC) No 1901/2006 apply to this trial?	No

Notes:

Results analysis stage

Analysis stage	Final
Date of interim/final analysis	11 August 2021
Is this the analysis of the primary completion data?	No
Global end of trial reached?	Yes
Global end of trial date	11 August 2021
Was the trial ended prematurely?	No

Notes:

General information about the trial

Main objective of the trial:

The main objective of this study is to evaluate the efficacy and safety of upadacitinib compared to placebo as induction therapy in participants with moderately and severely active Crohn's disease (CD).

Protection of trial subjects:

All study participants were required to read and sign an Informed Consent Form.

Background therapy: -

Evidence for comparator: -

Actual start date of recruitment	29 November 2017
Long term follow-up planned	No
Independent data monitoring committee (IDMC) involvement?	Yes

Notes:

Population of trial subjects

Subjects enrolled per country

Country: Number of subjects enrolled	Puerto Rico: 3

Notes:

Subjects enrolled per age group

In utero	0
Preterm newborn - gestational age < 37 wk	0
Newborns (0-27 days)	0
Infants and toddlers (28 days-23 months)	0
Children (2-11 years)	0
Adolescents (12-17 years)	0
Adults (18-64 years)	603
From 65 to 84 years	21
85 years and over	0

Subject disposition

Recruitment

Recruitment details:

This study had 3 Parts: Part 1: A randomized, double-blind, placebo-controlled Induction Period, Part 2: A single-arm active Induction Period to receive upadacitinib. Part 3: An Extended Treatment Period for clinical non-responders from Parts 1 or 2.

Pre-assignment

Screening details:

Once the enrollment for Part 1 was complete, participants were further enrolled in an open-label, single-arm active Induction Period to receive upadacitinib in Part 2. Part 3 has 3 cohorts: Cohorts 1 and 2 included participants who received placebo and upadacitinib in Part 1, respectively; Cohort 3 included participants from Part 2.

Period 1

Period 1 title	DB and OL Induction (12 Weeks)
Is this the baseline period?	Yes
Allocation method	Randomised - controlled
Blinding used	Double blind
Roles blinded	Subject, Investigator, Data analyst, Carer

Blinding implementation details:

Blinding was applicable only to Part 1 where participants received upadacitinib 45 mg once daily (QD) or matching placebo for 12 weeks in a double-blind (DB) way. Part 2 was implemented in a non-blinded manner, with participants receiving open label (OL) upadacitinib 45 mg QD for 12 weeks.

Arms

Are arms mutually exclusive?	Yes
Arm title	Part 1 (DB): Placebo

Arm description:

Participants received upadacitinib matching placebo tablets, orally, once daily (QD) for 12 weeks during the Double-blind (DB) Induction Period.

Arm type	Placebo
Investigational medicinal product name	Placebo
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Tablet
Routes of administration	Oral use

Dosage and administration details:

Upadacitinib matching placebo tablets, orally

Arm title	Part 1 (DB): Upadacitinib 45 mg
------------------	---------------------------------

Arm description:

Participants received upadacitinib 45 mg tablets, orally, QD for 12 weeks during the DB Induction Period.

Arm type	Experimental
Investigational medicinal product name	Upadacitinib
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Tablet
Routes of administration	Oral use

Dosage and administration details:

Upadacitinib 45 mg tablets, orally

Arm title	Part 2 (OL): Upadacitinib 45 mg
------------------	---------------------------------

Arm description:

Participants received upadacitinib 45 mg tablets, orally, QD for 12 weeks during the Open-label (OL) Induction Period.

Arm type	Experimental
Investigational medicinal product name	Upadacitinib
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Tablet
Routes of administration	Oral use

Dosage and administration details:

Upadacitinib 45 mg tablets, orally

Number of subjects in period 1	Part 1 (DB): Placebo	Part 1 (DB): Upadacitinib 45 mg	Part 2 (OL): Upadacitinib 45 mg
Started	171	324	129
Completed	149	291	123
Not completed	22	33	6
Adverse event	5	17	2
Withdrew consent	8	8	3
Reason not specified	1	3	1
Lost to follow-up	-	1	-
Lack of efficacy	8	4	-

Period 2

Period 2 title	12-Week Extended Treatment (ET)
Is this the baseline period?	No
Allocation method	Non-randomised - controlled
Blinding used	Double blind
Roles blinded	Subject, Investigator, Data analyst, Carer

Blinding implementation details:

Participants from Part 1 arm groups remained blinded to treatment in Part 3 to avoid unmasking the treatment received during Part 1. Participants from Part 2 arm group received OL treatment in Part 3.

Arms

Are arms mutually exclusive?	Yes
Arm title	Part 3 (ET DB): Upadacitinib 45 mg From Part 1 DB Placebo

Arm description:

Participants received upadacitinib 45 mg tablets, orally, QD for 12 weeks (until Week 24) during the Extended Treatment (ET) Period. Participants who received placebo in Part 1 and did not achieve clinical response at Week 12 were included in this group.

Arm type	Experimental
----------	--------------

Investigational medicinal product name	Upadacitinib

Reporting group description: Participants received upadacitinib 30 mg tablets, orally, QD for 12 weeks (until Week 24) during the ET Period. Participants who received OL upadacitinib 45 mg during Part 2 and did not achieve clinical response at Week 12 were included in this group.	

Primary: Percentage of Participants With Clinical Remission Per Patient-Reported Outcomes (PROs) at Week 12

End point title	Percentage of Participants With Clinical Remission Per Patient-Reported Outcomes (PROs) at Week 12 ^[1]
End point description: Clinical remission per PROs was defined as average daily very soft or liquid stool frequency (SF) ≤ 2.8 and average daily abdominal pain (AP) score ≤ 1.0 and both not greater than Baseline. The number of soft or liquid stools and abdominal pain rated on a scale of 0=none to 3=severe were recorded in an electronic diary. Results were based on non-responder imputation incorporating multiple imputation to handle missing data due to coronavirus disease (COVID-19) [NRI-C]. ITT1 Population included all randomised participants who received at least one dose of DB study drug during Part 1.	
End point type	Primary
End point timeframe: Baseline to Week 12	
Notes: [1] - The end point is not reporting statistics for all the arms in the baseline period. It is expected all the baseline period arms will be reported on when providing values for an end point on the baseline period. Justification: Only Part 1 Double-blind arms are applicable to this endpoint.

upper limit	33.1

Notes:

[2] - Point estimate and 95% CI were calculated using CMH.

[3] - P-value was calculated using CMH test adjusted for randomization stratification factors.

Primary: Percentage of Participants With Endoscopic Response at Week 12

End point title	Percentage of Participants With Endoscopic Response at Week 12 ^[4]
-----------------	---

End point description:

Endoscopic response was defined as greater than 50% decrease in Simple Endoscopic Score for Crohn's Disease (SES-CD) from Baseline of the induction study (or for participants with an SES-CD of 4 at Baseline of the induction study, at least a 2-point reduction from Baseline), as scored by Central Reviewer. SES-CD is calculated based the sum of individual segment values for four endoscopic variables (presence and size of ulcers, ulcerated surface, affected surface and presence of narrowing). Each variable in each segment is scored 0 to 3 resulting in SES-CD values ranging from 0 to 56 with higher scores indicating more severe disease. Intent-to-Treat (ITT) Population included all randomised participants who received at least one dose of DB study drug during Part 1. Results were based on NRI-C.

End point type	Primary
End point timeframe:	
Baseline to Week 12	

Notes:

[4] - The end point is not reporting statistics for all the arms in the baseline period. It is expected all the baseline period arms will be reported on when providing values for an end point on the baseline period. Justification: Only Part 1 Double-blind arms are applicable to this endpoint.

Notes:

[5] - Point estimate and 95% confidence interval (CI) were calculated using Cochran-Mantel-Haenszel test (CMH).

[6] - P-value was calculated using CMH test adjusted for randomization stratification factors.

Primary: Number of Participants With Adverse Events

End point title	Number of Participants With Adverse Events ^[7]
-----------------	---

End point description:

An adverse event (AE) is defined as any untoward medical occurrence in a patient or clinical investigation participant administered a pharmaceutical product and which does not necessarily have a causal relationship with this treatment. An AE can therefore be any unfavorable and unintended sign (including an abnormal laboratory finding), symptom, or disease temporally associated with the use of a medicinal (investigational) product, whether or not the event is considered causally related to the use of the product. Safety Population for Part 1 (SA1)=all participants who received at least one dose of the study drug in Part 1, SA2=all participants who received at least one dose of the study drug in Part 2, and SA3=all participants who received at least one dose of the study drug (upadacitinib 30 mg or upadacitinib 45 mg) in Part 3.

End point type	Primary
----------------	---------

End point timeframe:

From first dose of study drug until 30 days following last dose of study drug (up to approximately 28 weeks)

Notes:

[7] - No statistical analyses have been specified for this primary end point. It is expected there is at least one statistical analysis for each primary end point.

Justification: No statistical analyses are reported for this endpoint.

Secondary: Percentage of Participants With Clinical Remission Per Crohn's Disease Activity Index (CDAI) at Week 12

End point title	Percentage of Participants With Clinical Remission Per Crohn's Disease Activity Index (CDAI) at Week 12 ^[8]
-----------------	--

End point description:

The CDAI was used to evaluate the activity of Crohn's disease. Clinical remission per CDAI is defined as CDAI <150. The CDAI is calculated on the basis of a one-week evaluation of 8 items: frequency of liquid or very soft stool, abdominal pain, complications of Crohn's disease (e.g., uveitis, arthritis, fistula, and abscess), abdominal mass, hematocrit, body weight, use of antidiarrheals, and general condition. Total score ranges from 0 to 600. Higher CDAI scores indicate more severe disease. CDAI scores below 150 represent remission and scores over 450 represent very severe Crohn's disease. ITT1 Population included all randomised participants who received at least one dose of DB study drug during Part 1. Results were based on NRI-C.

End point description:

Clinical remission per PROs was defined as average daily very soft or liquid stool frequency (SF) ≤ 2.8 and average daily abdominal pain (AP) score ≤ 1.0 and both not greater than Baseline. The number of soft or liquid stools and abdominal pain rated on a scale of 0=none to 3=severe were recorded in an electronic diary. Results were based on NRI-C. ITT1 Population=participants receiving at least one dose of DB study drug during Part 1. Number of subjects analysed=number of participants who were taking corticosteroids at Baseline.

End point type	Secondary
----------------	-----------

End point timeframe:

Week 12

Notes:

[17] - The end point is not reporting statistics for all the arms in the baseline period. It is expected all the baseline period arms will be reported on when providing values for an end point on the baseline period.

Justification: Only Part 1 Double-blind arms are applicable to this endpoint.

[18] - Point estimate and 95% CI were calculated using CMH.

[19] - P-value was calculated using CMH test adjusted for randomisation stratification factors.

Secondary: Change From Baseline in Functional Assessment of Chronic Illness Therapy-Fatigue (FACIT-F) Total Score at Week 12

End point title	Change From Baseline in Functional Assessment of Chronic Illness Therapy-Fatigue (FACIT-F) Total Score at Week 12 ^[20]
-----------------	---

End point description:

The FACIT-F questionnaire was developed to assess fatigue associated with anemia. It consists of 13 fatigue-related questions. The responses to the 13 items on the FACIT-F questionnaire are each measured on a 5-point Likert scale. The responses to the answers are the following: 0= not at all; 1= a little bit; 2= somewhat; 3= quite a bit; 4=very much. Thus, the total score ranges from 0 to 52. High scores represent less fatigue. A positive change from Baseline indicates improvement. ITT1 Population included all randomised participants who received at least one dose of DB study drug during Part 1. Overall number of subjects analyzed are the number of subjects with data available for analyses.

Secondary: Percentage of Participants Achieving Clinical Response 100 (CR-100) at Week 2

End point title	Percentage of Participants Achieving Clinical Response 100 (CR-100) at Week 2 ^[26]
-----------------	---

End point description:

CR-100 is defined as a decrease of at least 100 points in CDAI from Baseline at week 2. The CDAI is used to evaluate the activity of Crohn's disease. The CDAI is calculated on the basis of a one-week evaluation of 8 items: frequency of liquid or very soft stool, abdominal pain, complications of Crohn's disease (e.g., uveitis, arthritis, fistula, and abscess), abdominal mass, hematocrit, body weight, use of antidiarrheals, and general condition. Total score ranges from 0 to about 600. Higher CDAI scores indicate more severe disease. CDAI scores below 150 represent remission and scores over 450 represent very severe Crohn's disease. Results were based on NRI-C. ITT1 Population included all randomized participants who received at least one dose of DB study drug during Part 1.

More information

Substantial protocol amendments (globally)

Were there any global substantial amendments to the protocol? Yes

Date	Amendment
02 October 2017	The following changes were implemented with Amendment 1: -Updated eligibility criteria. -Updated the duration of the maintenance part of Substudy 1 from 48 to 52 weeks. -Revised ranked secondary and additional secondary efficacy endpoints.
24 January 2018	The following changes were implemented with Amendment 2: -Added vedolizumab as a prohibited biologic therapy during the study. -Clarified that the primary variables would be analysed for subjects enrolled in Part 1. -Clarified that the secondary variables would be analysed for subjects enrolled in Part 1. -Added SES-CD ≤ 2 at Week 12 to be consistent with pre-specified endpoint analysis for descriptive statistics. -Clarification on the pre-specified endpoint analysis for descriptive statistics for subjects enrolled in Part 2. -Added pre-specified endpoints for descriptive statistics for subjects enrolled in Part 3. -Clarification on the analysis methods considered for continuous secondary endpoints.
24 August 2018	The following changes were implemented with Amendment 3: -Updated the introduction to add 52-week data from AbbVie Study M13-740 (NCT02365649) and to clarify that the once-daily modified release formulation is being used in this study. -Updated overall study design and plan to note that the minimum Screening Period duration was corrected to reflect the minimum number of days for abdominal pain and stool frequency, accounting for the exclusion of non-usable days due to endoscopy-related procedures. -Updated eligibility criteria. -Clarified and provided additional guidance on the use of corticosteroids during the study. -Corrected the cutoff age for females in defining postmenopausal and updated contraception language. -Added the Montreal classification for Crohn's disease at Screening for the assessment of disease severity.
08 April 2019	The following changes were implemented with Amendment 4: -Updated overall study design and plan. -Updated exclusion criteria to ensure more appropriate selection of subjects into the study to avoid interference with efficacy assessments, to minimize or better manage the potential risks to the participants, and/or to provide further clarifications. -Removed mention of Japan and China from text describing conditions under which a chest x-ray will not be required, as a prior computerized tomography (CT) scan can apply to subjects from any country. -Updated toxicity management to align with the entire upadacitinib clinical programs, based on cumulative data with the compound. -Updated secondary efficacy variables to ensure accurate descriptions of statistical methods.
29 April 2020	The following changes were implemented with Amendment 5: -Updated introduction to include results of recent long-term integrated data from the Phase 3 Rheumatoid Arthritis program and the recent risk updates to the Janus kinase (JAK) inhibitor class. -Updated overall study design. -Updated eligibility criteria. -Updated efficacy variables: Changed co-primary efficacy endpoint to clinical remission based on CDAI for the United States Food and Drug Administration (US/FDA). -The European Union/European Medicines Agency (EU/EMA) co-primary efficacy endpoint for clinical remission remained based on PROs. -Ranked secondary variables then included change from Baseline in IBDQ at Week 12, proportion of subjects achieving CR-100 at Week 2 and Week 12, and assessment of extraintestinal manifestations. -Four variables (proportion of subjects with enhanced clinical response, $\geq 50\%$ reduction in draining fistulas, response in IBDQ bowel domain at Week 12 and change from baseline in CSS) were not to be ranked but included under additional efficacy variables. -Updated toxicity management section. -Added management of missing data due to COVID-19.

24 September 2020	The following changes were implemented with Amendment 6: - Updated information on the re-evaluation of the benefit and risk to subjects participating in the study, updated wording to allow for changes in visits and procedures affected by COVID-19 pandemic and asocial changes in global/local regulations.
05 March 2021	The following changes were implemented with Amendment 7: -Updated protocol to decrease the sample size of Part 2 from approximately 150 subjects to approximately 130 subjects, and consequently the total sample size from 645 to 625 subjects. -Increased the maximum percentage of subjects enrolled who have had inadequate response or intolerance to 3 or more biologics from 30% to 35%.

Notes:

Interruptions (globally)

Were there any global interruptions to the trial? No

Limitations and caveats
