

**Clinical trial results:**

An open-label, non-investigational product, multi-center, lead-in study to evaluate prospective efficacy and selected safety data of current factor IX (FIX) or factor VIII (FVIII) prophylaxis replacement therapy in the usual care setting of moderately severe to severe adult hemophilia B participants (FIX:C less than or equal to [\leq]2percentage [%]) who are negative for neutralizing antibodies to adeno-associated virus vector-spark100 (BENEGENE-1) and moderately severe to severe hemophilia A adult participants (FVIII:C \leq 1%) who are negative for neutralizing antibodies to adeno-associated virus vector 6 (AAV6), prior to the respective therapeutic phase 3 gene therapy studies.

Paediatric regulatory details

Is trial part of an agreed paediatric investigation plan (PIP)	No
Does article 45 of REGULATION (EC) No 1901/2006 apply to this trial?	No
Does article 46 of REGULATION (EC) No	No

1901/2006 apply to this trial?

Notes:

Results analysis stage

Analysis stage	Final
Date of interim/final analysis	28 April 2025
Is this the analysis of the primary completion data?	No

Global end of trial reached?	Yes
Global end of trial date	12 December 2024
Was the trial ended prematurely?	No

Notes:

General information about the trial

Main objective of the trial:

The primary objective is to establish prospective efficacy data of FIX or FVIII prophylaxis replacement therapy, in the usual care setting of hemophilia B participants who are negative for neutralizing antibodies (nAb) to adeno-associated virus vector (AAV)-Spark100 or hemophilia A participants who are negative for nAb to AAV6.

Protection of trial subjects:

The study was in compliance with the ethical principles derived from international guidelines, including the Declaration of Helsinki and Council for International Organizations of Medical Sciences (CIOMS) International Ethical Guidelines; applicable International Council for Harmonization (ICH) Good Clinical Practice (GCP) guidelines; applicable laws and regulations, including applicable privacy laws.

Background therapy: -

Evidence for comparator: -

Actual start date of recruitment	26 July 2018
Long term follow-up planned	No
Independent data monitoring committee (IDMC) involvement?	No

Notes:

Notes:

Subjects enrolled per age group

In utero	0
Preterm newborn - gestational age < 37 wk	0
Newborns (0-27 days)	0
Infants and toddlers (28 days-23 months)	0
Children (2-11 years)	0
Adolescents (12-17 years)	0
Adults (18-64 years)	212
From 65 to 84 years	0
85 years and over	0

Subject disposition

Recruitment

Recruitment details:

A total of 212 participants were enrolled in this study.

Pre-assignment

Screening details:

Participants with moderately severe to severe adult hemophilia B or hemophilia A who received FIX and FVIII standard prophylaxis replacement therapy in the usual care setting were enrolled in the study.

Period 1

Period 1 title	Overall Study (overall period)
Is this the baseline period?	Yes
Allocation method	Non-randomised - controlled
Blinding used	Not blinded

Blinding implementation details:

Not applicable

Arms

Are arms mutually exclusive?	Yes
------------------------------	-----

Arm title	Standard of Care FIX Replacement Therapy (Hemophilia B)
------------------	---

Arm description:

Participants with moderately severe to severe hemophilia B who administered their own current FIX replacement therapy in the usual healthcare setting were included. No investigational product was administered as a part of this study.

Arm type	No investigational product
Investigational medicinal product name	FIX replacement therapy
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Powder and solvent for solution for injection/infusion
Routes of administration	Intravenous use

Dosage and administration details:

Hemophilia B participants remained on their current FIX replacement therapy using their usual prophylaxis regimen.

Arm title	Standard of Care FVIII Replacement Therapy (Hemophilia A)
------------------	---

Arm description:

Participants with moderately severe to severe hemophilia A who administered their own current FVIII replacement therapy in the usual healthcare setting were included. No investigational product was administered as a part of this study.

Arm type	No investigational product
Investigational medicinal product name	FVIII replacement therapy
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Powder and solvent for solution for injection/infusion
Routes of administration	Intravenous use

Dosage and administration details:

Hemophilia A participants remained on their current FVIII replacement therapy using their usual prophylaxis regimen.

Number of subjects in period 1	Standard of Care FIX Replacement Therapy (Hemophilia B)	Standard of Care FVIII Replacement Therapy (Hemophilia A)
Started	111	101
Completed	107	99
Not completed	4	2
Consent withdrawn by subject	4	-
No Longer Met Eligibility Criteria	-	1
Lost to follow-up	-	1

End points

End points reporting groups

Reporting group title	Standard of Care FIX Replacement Therapy (Hemophilia B)
Reporting group description: Participants with moderately severe to severe hemophilia B who administered their own current FIX replacement therapy in the usual healthcare setting were included. No investigational product was administered as a part of this study.	
Reporting group title	Standard of Care FVIII Replacement Therapy (Hemophilia A)
Reporting group description: Participants with moderately severe to severe hemophilia A who administered their own current FVIII replacement therapy in the usual healthcare setting were included. No investigational product was administered as a part of this study.	

Primary: Annualized Bleeding Rate (ABR) for Treated Bleeds and All Bleeds During Prospective Data Collection Period in Hemophilia B Participants: Efficacy Analysis set

End point title	Annualized Bleeding Rate (ABR) for Treated Bleeds and All Bleeds During Prospective Data Collection Period in Hemophilia B Participants: Efficacy Analysis set ^{[1][2]}
End point description: ABR per participant calculated as number of bleeds over number of days from baseline visit (Day 1 of study) to end of study*365.25 days. All bleeds=treated and untreated bleeds. Treated bleed: event necessitating administration of coagulation factor within 72 hours of signs or symptoms of bleeding. Untreated bleed: event not necessitating administration of coagulation factor within 72 hours of signs or symptoms of bleeding. Efficacy analysis set included participants who signed an informed consent form (ICF), had their blood sample collected and assayed for bioengineered AAV capsid, derived from a naturally occurring AAV serotype (AAV-Spark100) or adeno-associated virus 6(AAV6) immunity testing, who were subsequently identified as nAb negative(negative for nAb to AAV-Spark100 for hemophilia B cohort), met inclusion/exclusion criteria and who participated in prospective data collection phase as part of their usual healthcare setting.	
End point type	Primary
End point timeframe: During prospective data collection period (from baseline visit of the study [Day 1] up to end of study follow-up [maximum follow-up: 1269 days])	

Notes:

[1] - No statistical analyses have been specified for this primary end point. It is expected there is at least one statistical analysis for each primary end point.

Justification: Only descriptive data was planned to be analyzed for this endpoint.

[2] - The end point is not reporting statistics for all the arms in the baseline period. It is expected all the baseline period arms will be reported on when providing values for an end point on the baseline period.

Justification: This endpoint was planned to be analysed only for the specified reporting arms.

End point values	Standard of Care FIX Replacement Therapy (Hemophilia B)			
Subject group type	Reporting group			
Number of subjects analysed	110			
Units: Bleeds per year				
arithmetic mean (standard deviation)				
Treated bleeds	3.61 (± 7.634)			
All bleeds	4.46 (± 9.446)			

Statistical analyses

No statistical analyses for this end point

Primary: ABR for Treated Bleeds and All Bleeds During Prospective Data Collection Period in Hemophilia B Participants: Per-protocol Analysis set

End point title	ABR for Treated Bleeds and All Bleeds During Prospective Data Collection Period in Hemophilia B Participants: Per-protocol Analysis set ^{[3][4]}
-----------------	---

End point description:

ABR per participant was calculated as number of bleeds over number of days from baseline visit (Day 1 of the study) to end of study *365.25 days. All bleeds included treated and untreated bleeds. A treated bleed was defined as an event necessitating administration of coagulation factor within 72 hours of signs or symptoms of bleeding. An untreated bleed was defined as an event not necessitating administration of coagulation factor within 72 hours of signs or symptoms of bleeding. Per-Protocol analysis set included all participants who signed an ICF, had their blood sample collected and assayed for AAV-Spark100 or AAV6 immunity testing, who were subsequently identified as nAb negative (negative for nAb to AAV-Spark100 for hemophilia B cohort), met inclusion/ exclusion criteria and who participated and completed at least 6 months of prospective data collection phase as part of their usual healthcare setting.

End point type	Primary

Secondary: ABR for Spontaneous Treated Bleeds and All Bleeds During Prospective Data Collection Period in Hemophilia A Participants: Efficacy Analysis set

End point title	ABR for Spontaneous Treated Bleeds and All Bleeds During Prospective Data Collection Period in Hemophilia A Participants: Efficacy Analysis set ^[41]
-----------------	---

End point description:

ABR per participant was calculated as number of bleeds over number of days from baseline visit (Day 1) to end of study*365.25 days. Spontaneous bleeds: bleeding for no apparent or known reason particularly into the joints, muscles, and soft tissues. All bleeds included treated and untreated bleeds. Treated bleed: event necessitating administration of coagulation factor within 72hours of signs or symptoms of bleeding. Untreated bleed: event not necessitating administration of coagulation factor within 72hours of signs or symptoms of bleeding. Efficacy analysis set included participants who signed an ICF, had their blood sample collected and assayed for AAV-Spark100 or AAV6 immunity testing, who were subsequently identified as nAb negative (negative for nAb to AAV6 for hemophilia A cohort), met inclusion/ exclusion criteria and who participated in prospective data collection phase as part of their usual healthcare setting.

End point type	Secondary
----------------	-----------

End point timeframe:

During prospective data collection period (from baseline visit of the study [Day 1] up to end of study follow-up [maximum follow-up: 948 days])

Notes:

[41] - The end point is not reporting statistics for all the arms in the baseline period. It is expected all the baseline period arms will be reported on when providing values for an end point on the baseline period.

Justification: This endpoint was planned to be analysed only for the specified reporting arms.

End point values	Standard of Care FVIII Replacement Therapy (Hemophilia A)			
Subject group type	Reporting group			
Number of subjects analysed	96			
Units: Bleeds per year				
arithmetic mean (standard deviation)				
Treated bleeds	3.15 (± 5.948)			
All bleeds	3.89 (± 7.552)

Other pre-specified: Number of Participants With Serious Adverse Events (SAEs)

End point title	Number of Participants With Serious Adverse Events (SAEs)
-----------------	---

End point description:

An adverse event (AE) was any untoward medical occurrence in a study participant administered a product or medical device; the event need not necessarily have a causal relationship with the treatment or usage. An SAE was any untoward medical occurrence at any dose that met 1 of the following criteria: resulted in death; was life-threatening; required inpatient hospitalization or prolongation of existing hospitalization; resulted in persistent or significant disability/ incapacity; resulted in congenital anomaly/birth defect; other important medical events per protocol of the study. Safety analysis set (SAS) included all enrolled participants (negative for nAb to AAV-Spark100 for the hemophilia B cohort, or negative for nAb to AAV6 for the hemophilia A cohort) who entered the prospective data collection phase.

End point type	Other pre-specified

Adverse events

Adverse events information

Timeframe for reporting adverse events:

During prospective data collection period (from baseline visit of the study [Day 1] up to end of study follow-up [maximum follow-up: 1269 days])

Adverse event reporting additional description:

Same event may occur as both non-SAE and SAE but are distinct events. An event may be categorised as serious in 1 participant and non-serious in another, or a participant may have experienced both SAE and non-SAE. Safety analysis set was evaluated.

Assessment type	Non-systematic

More information

Substantial protocol amendments (globally)

Were there any global substantial amendments to the protocol? Yes

Date	Amendment
27 June 2019	Including an additional cohort (hemophilia A population) as part of the 6-month lead-in study, to support the initiation of the hemophilia A gene therapy Phase 3 study. Incorporate administrative changes from the 6 previous protocol administrative change letters (PACs).
17 May 2022	Clarified that participant with a history of a neoplasm (including hepatic malignancy) that required treatment (e.g., chemotherapy, radiotherapy, immunotherapy), is excluded, except for adequately treated basal or squamous cell carcinoma of the skin or a surgically removed benign neoplasm not requiring chemotherapy, radiotherapy and/or immunotherapy. Any other neoplasm that has been cured by resection should be discussed between the investigator and sponsor. Clarified that participants with conditions associated with increased thromboembolic risk such as known inherited or acquired thrombophilia, or a history of thrombotic events, including venous thromboembolism, should be excluded so that it is not open to investigator discretion.

Notes:

Interruptions (globally)

Were there any global interruptions to the trial? No

Limitations and caveats

None reported
