

Clinical trial results:

A Phase III, Multicenter, Randomized, Double-Blind, Placebo-Controlled, Parallel-Group, Efficacy, and Safety Study of Gantenerumab in Patients With Early (Prodromal to Mild) Alzheimer's Disease

Summary

EudraCT number	2017-001365-24
Trial protocol	ES GB DK BE PT PL NL SE FI HR
Global end of trial date	28 November 2022

Results information

Result version number	v2 (current)
This version publication date	13 April 2024
First version publication date	08 October 2023
Version creation reason	• Correction of full data set Update in OM description.

Notes:

Paediatric regulatory details

Is trial part of an agreed paediatric investigation plan (PIP)	No
Does article 45 of REGULATION (EC) No 1901/2006 apply to this trial?	No
Does article 46 of REGULATION (EC) No 1901/2006 apply to this trial?	No

Notes:

Results analysis stage

Analysis stage	Final
Date of interim/final analysis	28 November 2022
Is this the analysis of the primary completion data?	No
Global end of trial reached?	Yes
Global end of trial date	28 November 2022
Was the trial ended prematurely?	Yes

Notes:

General information about the trial

Main objective of the trial:

The main objective of this study was to evaluate the efficacy and safety of gantenerumab administered by subcutaneous (SC) injection compared with placebo.

Protection of trial subjects:

All study participants were required to read and sign an Informed Consent Form (ICF).

Background therapy:

Participants were allowed to take standard of care symptomatic treatment throughout the study i.e., cholinesterase inhibitors and/or memantine.

Evidence for comparator: -

Actual start date of recruitment	22 August 2018
Long term follow-up planned	Yes
Long term follow-up rationale	Efficacy, Safety
Long term follow-up duration	12 Months
Independent data monitoring committee (IDMC) involvement?	Yes

Notes:

Population of trial subjects

Subjects enrolled per country

Country: Number of subjects enrolled	Argentina: 62
Country: Number of subjects enrolled	Belgium: 10
Country: Number of subjects enrolled	Chile: 46
Country: Number of subjects enrolled	Denmark: 18
Country: Number of subjects enrolled	Spain: 155
Country: Number of subjects enrolled	Finland: 23
Country: Number of subjects enrolled	United Kingdom: 54
Country: Number of subjects enrolled	Croatia: 1
Country: Number of subjects enrolled	Japan: 64
Country: Number of subjects enrolled	Korea, Republic of: 54
Country: Number of subjects enrolled	Mexico: 50
Country: Number of subjects enrolled	Netherlands: 8
Country: Number of subjects enrolled	Poland: 127
Country: Number of subjects enrolled	Portugal: 32
Country: Number of subjects enrolled	Singapore: 10
Country: Number of subjects enrolled	Sweden: 24
Country: Number of subjects enrolled	Turkey: 3
Country: Number of subjects enrolled	United States: 234

Worldwide total number of subjects	975
EEA total number of subjects	398

Notes:

Subjects enrolled per age group	
In utero	0
Preterm newborn - gestational age < 37 wk	0
Newborns (0-27 days)	0
Infants and toddlers (28 days-23 months)	0
Children (2-11 years)	0
Adolescents (12-17 years)	0
Adults (18-64 years)	167
From 65 to 84 years	771
85 years and over	37

Subject disposition

Recruitment

Recruitment details:

Participants were enrolled in the study across 151 investigative sites in 18 countries from 22 August 2018 to 28 November 2022.

Pre-assignment

Screening details:

A total of 975 participants with early (prodromal to mild) Alzheimer's Disease (AD) were randomized to either the gantenerumab (n=498) or placebo arm (n=477) to enter the double-blind treatment (DBT) period.

Period 1

Period 1 title	Double-blind Treatment Period
Is this the baseline period?	Yes
Allocation method	Randomised - controlled
Blinding used	Double blind
Roles blinded	Subject, Investigator

Arms

Are arms mutually exclusive?	Yes
Arm title	Placebo: DBT

Arm description:

Participants received, gantenerumab matching placebo, subcutaneous (SC) injections, every four weeks (Q4W) up to Week 36 and then every two weeks (Q2W) up to Week 114 of the DBT period.

Arm type	Placebo
Investigational medicinal product name	Placebo
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Solution for injection
Routes of administration	Subcutaneous use

Dosage and administration details:

Gantenerumab matching placebo administered as SC injections, Q4W up to Week 36 and then Q2W up to Week 114 of the DBT period.

Arm title	Gantenerumab: DBT
------------------	-------------------

Arm description:

Participants received gantenerumab, SC injections with gradual up-titration starting at a dose of 120 milligrams (mg), Q4W for 3 doses, followed by 255 mg, Q4W for 3 doses, and 510 mg, Q4W for 3 doses. Following this, from Week 36 onwards, participants received gantenerumab, SC injections, at a dose of 510 mg, Q2W up to Week 114 of the DBT period.

Arm type	Experimental
Investigational medicinal product name	Gantenerumab
Investigational medicinal product code	RO4909832
Other name	
Pharmaceutical forms	Solution for injection
Routes of administration	Subcutaneous use

Dosage and administration details:

Gantenerumab administered as SC injections with gradual up titration starting at a dose of 120 mg, Q4W for 3 doses, followed by 255 mg, Q4W for 3 doses, and 510 mg, Q4W for 3 doses. After Week 36, gantenerumab, SC injections, at a dose of 510 mg, Q2W up to Week 114 of the DBT period.

Number of subjects in period 1	Placebo: DBT	Gantenerumab: DBT
Started	477	498
Completed	397	372
Not completed	80	126
Adverse event, serious fatal	5	7
Consent withdrawn by subject	54	79
Physician decision	5	6
Adverse event, non-fatal	5	19
Protocol Deviation	1	2
Reason Not Specified	9	11
Lost to follow-up	-	1
Lack of efficacy	1	1

Period 2

Period 2 title	Open-label Extension Period
Is this the baseline period?	No
Allocation method	Non-randomised - controlled
Blinding used	Not blinded

Blinding implementation details:

Participants were blinded to previous treatment assignments through a blinded titration period.

Arms

Are arms mutually exclusive?	Yes
Arm title	Placebo (DBT) to Gantenerumab: Open-label Extension (OLE)

Arm description:

Participants who received gantenerumab matching placebo in the DBT period received gantenerumab SC injections with gradual up titration starting at a dose of 120 mg, Q4W for 3 doses, followed by 255 mg, Q4W for 3 doses, and then at a dose of 510 mg, Q4W up to Week 34 of the OLE period. To maintain the blind to previous treatment assignment, participants received Q2W, SC injections, with alternate doses containing gantenerumab matching placebo.

Arm type	Experimental
Investigational medicinal product name	Gantenerumab
Investigational medicinal product code	RO4909832
Other name	
Pharmaceutical forms	Solution for injection
Routes of administration	Subcutaneous use

Dosage and administration details:

Gantenerumab SC injections with gradual up titration starting at a dose of 120 mg, Q4W for 3 doses, followed by 255 mg, Q4W for 3 doses, and then at a dose of 510 mg, Q4W up to Week 34 of the OLE period. To maintain the blind to previous treatment assignment, participants received Q2W, SC injections, with alternate doses containing gantenerumab matching placebo.

Arm title	Gantenerumab (DBT) to Gantenerumab: OLE
------------------	---

Arm description:

Participants who received gantenerumab in the DBT period continued receiving gantenerumab, SC injections, 510 mg, Q2W up to Week 34 of the OLE period.

Arm type	Experimental
Investigational medicinal product name	Gantenerumab
Investigational medicinal product code	RO4909832
Other name	
Pharmaceutical forms	Solution for injection
Routes of administration	Subcutaneous use

Dosage and administration details:

Gantenerumab, SC injections, 510 mg, Q2W up to Week 34 of the OLE period.

Number of subjects in period 2^[1]	Placebo (DBT) to Gantenerumab: Open-label Extension (OLE)	Gantenerumab (DBT) to Gantenerumab: OLE
Started	13	14
Completed	8	13
Not completed	5	1
Consent withdrawn by subject	2	1
Reason Not Specified	3	-

Notes:

[1] - The number of subjects starting the period is not consistent with the number completing the preceding period. It is expected the number of subjects starting the subsequent period will be the same as the number completing the preceding period.

Justification: Participants who completed the DBT Period enrolled into the OLE Period or choose to enter the safety follow up or rolled over to PostGraduate OLE (WN42171) study.

Baseline characteristics

Reporting groups

Reporting group title	Placebo: DBT
-----------------------	--------------

Reporting group description:

Participants received, gantenerumab matching placebo, subcutaneous (SC) injections, every four weeks (Q4W) up to Week 36 and then every two weeks (Q2W) up to Week 114 of the DBT period.

Reporting group title	Gantenerumab: DBT
-----------------------	-------------------

Reporting group description:

Participants received gantenerumab, SC injections with gradual up-titration starting at a dose of 120 milligrams (mg), Q4W for 3 doses, followed by 255 mg, Q4W for 3 doses, and 510 mg, Q4W for 3 doses. Following this, from Week 36 onwards, participants received gantenerumab, SC injections, at a dose of 510 mg, Q2W up to Week 114 of the DBT period.

Reporting group values	Placebo: DBT	Gantenerumab: DBT	Total
Number of subjects	477	498	975

Clinical Dementia Rating-Sum of Boxes (CDR-SB)			
CDR was derived by semi-structured interview with participant & informant & rated impairment across 6 domains: memory,orientation,judgment & problem solving,community affairs,home & hobbies & personal care on 5-point scale for which 0=no impairment, 0.5=questionable impairment & 1, 2 & 3=mild,moderate,severe impairment respectively. CDR-SB is based on summing each domain box scores with total score ranging 0-18 with higher scores=greater cognitive & functional impairment. ITT analysis set included all participants randomised during global phase who received at least 1 dose of study drug.			
Units: score on a scale			

arithmetic mean	3.52	3.67	
standard deviation	± 1.54	± 1.61	-

Subject analysis set title	Gantenerumab: DBT
Subject analysis set type	Safety analysis
Subject analysis set description: Participants received gantenerumab, SC injections with gradual up-titration starting at a dose of 120 mg, Q4W for 3 doses, followed by 255 mg, Q4W for 3 doses, and 510 mg, Q4W for 3 doses. Following this, from Week 36 onwards, participants received gantenerumab, SC injections, at a dose of 510 mg, Q2W up to Week 114 of the DBT period.	

Primary: DBT Period: Change From Baseline to Week 116 in Global Outcome, as Measured by CDR-SB

End point title	DBT Period: Change From Baseline to Week 116 in Global Outcome, as Measured by CDR-SB
End point description: CDR was derived through semi-structured interview with the participant and an appropriate informant, and it rated impairment across six domains: memory, orientation, judgment, and problem solving, community affairs, home and hobbies, and personal care on a 5-point scale for which 0=no impairment, 0.5=questionable impairment, and 1, 2, and 3=mild, moderate, and severe impairment, respectively. The CDR-SB is based on summing each of the domain box scores with total score ranging from 0-18 with higher scores reflecting greater cognitive and functional impairment. A negative change from baseline indicates improvement. ITT analysis set included all participants randomised during the global phase, who received at least one dose of study drug. Overall number analysed is the number of participants with data available for analysis.

Secondary: DBT Period: Change From Baseline to Week 116 in Mini-Mental State Examination (MMSE) Total Score

End point title	DBT Period: Change From Baseline to Week 116 in Mini-Mental State Examination (MMSE) Total Score
-----------------	--

End point description:

MMSE is a rater-administered performance-based outcome (PerfO) that includes a set of standardized questions used to evaluate possible cognitive impairment and help stage the severity level of this impairment. The questions target six areas: orientation, registration, attention, short-term recall, language, and constructional praxis/visuospatial abilities. Total score ranges from 0-30, with lower scores indicating greater impairment. A positive change from baseline indicates improvement. ITT analysis set included all participants randomised during the global phase, who received at least one dose of study drug. Overall number analysed is the number of participants with data available for analysis.

Number of subjects analysed	72	71		
Units: percent change in tTau				
geometric mean (confidence interval 95%)	1.8 (-4.46 to 8.45)	-16.4 (-21.55 to -10.87)		

Statistical analyses

Statistical analysis title	Placebo: DBT, Gantenerumab: DBT
Comparison groups	Placebo: DBT v Gantenerumab: DBT
Number of subjects included in analysis	143
Analysis specification	Pre-specified
Analysis type	superiority
P-value	< 0.001
Method	ANCOVA

Secondary: DBT Period: Percent Change From Baseline in CSF Marker of Disease in a Subset of Participants - Phosphorylated Tau (pTau-181)

End point title	DBT Period: Percent Change From Baseline in CSF Marker of Disease in a Subset of Participants - Phosphorylated Tau (pTau-181)
-----------------	---

End point description:

CSF phospho-tau is an indicator of neuronal injury and neurodegeneration. CSF biomarker tTau has

been considered as a general marker of neurodegeneration. An elevation in levels of pTau species, is thought to be a marker for progressive cellular degeneration in AD. CSF modified ITT analysis set included all participants in the ITT analysis set who had at least one valid quantitative CSF measurement. Overall number analysed is the number of participants with data available for analysis.

End point type	Secondary
End point timeframe:	
Baseline, Week 116

Adverse events

Adverse events information

Timeframe for reporting adverse events:

DBT Period: Day 1 to 14 weeks post last dose of study drug (up to 128 weeks); OLE Period: Day 1 (OLE) to 14 weeks post last OLE dose (up to 48 weeks)

Deaths: DBT: Day 1 to end of study (approx. 164 weeks); OLE: OLE Day 1 to end of study (approx. 86 weeks)

Adverse event reporting additional description:

Safety-evaluable set=all participants randomized during global phase who received at least one dose of study drug.3 participants in placebo received at least one dose of gantenerumab &were represented in gantenerumab arm;OLE safety set=all participants randomized during global enrollment &who received at least one dose of drug &entered OLE period.

Assessment type	Systematic

Reporting groups

Reporting group title	Placebo: DBT
-----------------------	--------------

Reporting group description:

Participants received, gantenerumab matching placebo, SC injections, Q4W up to Week 36 and then Q2W up to Week 114 of the DBT period.

Reporting group title	Gantenerumab (DBT) to Gantenerumab: OLE
-----------------------	---

Reporting group description:

Participants who received gantenerumab in the DBT period continued receiving gantenerumab, SC injections, 510 mg, Q2W up to Week 34 of the OLE period.

Reporting group title	Placebo (DBT) to Gantenerumab: OLE
-----------------------	------------------------------------

Reporting group description:

Participants who received gantenerumab matching placebo in the DBT period received gantenerumab SC injections with gradual up titration starting at a dose of 120 mg, Q4W for 3 doses, followed by 255 mg, Q4W for 3 doses, and then at a dose of 510 mg, Q4W up to Week 34 of the OLE period. To maintain the blind to previous treatment assignment, participants received Q2W, SC injections, with alternate doses containing gantenerumab matching placebo.

Reporting group title	Gantenerumab: DBT
-----------------------	-------------------

Reporting group description:

Participants received gantenerumab, SC injections with gradual up-titration starting at a dose of 120 mg, Q4W for 3 doses, followed by 255 mg, Q4W for 3 doses, and 510 mg, Q4W for 3 doses. Following this, from Week 36 onwards, participants received gantenerumab, SC injections, at the a dose of 510 mg, Q2W up to Week 114 of the DBT period.

occurrences (all)	36		
Oral candidiasis			
subjects affected / exposed	1 / 501 (0.20%)		
occurrences (all)	1		
Groin infection			
subjects affected / exposed	0 / 501 (0.00%)		
occurrences (all)	0		
Nasopharyngitis			

subjects affected / exposed	45 / 501 (8.98%)		
occurrences (all)	53		
Urinary tract infection			
subjects affected / exposed	32 / 501 (6.39%)		
occurrences (all)	34		
Upper respiratory tract infection			
subjects affected / exposed	29 / 501 (5.79%)		
occurrences (all)	38		
Suspected COVID-19			
subjects affected / exposed	8 / 501 (1.60%)		
occurrences (all)	8		
Pharyngitis			
subjects affected / exposed	4 / 501 (0.80%)		
occurrences (all)	4		
Metabolism and nutrition disorders			
Vitamin D deficiency			
subjects affected / exposed	2 / 501 (0.40%)		
occurrences (all)	2		

More information

Substantial protocol amendments (globally)

Were there any global substantial amendments to the protocol? Yes

Date	Amendment
11 February 2018	The purpose of this protocol amendment was to present the results of the relative bioavailability study (WP40052) and to adjust the dosing regimen of GRADUATE II according to these results. No participants were enrolled in the study at the time of implementation of the updated protocol. In addition, the entry criteria of the study population were revised to increase the homogeneity of the study population and to better target the appropriate study population.
21 January 2020	The purpose of this protocol update was to update the sample size of the study. While protocol wording allowed an increase in total enrollment up to 1,140 participants based on factors external to the study, the Sponsor clarified that upon initial learnings from external studies, a decision was made to increase the power of the study. Thus, the sample size was increased from 760 participants to 1,016 (508 patients randomized to gantenerumab and 508 randomized to placebo). In addition, the protocol was amended to allow the first patients enrolled in the study to enroll in an OLE as planned. Details on this procedure and the OLE schedule of activities was also added.
28 May 2020	The purpose of this protocol amendment was to respond to the COVID-19 pandemic due to the SARS-CoV-2 virus. This amendment extended the double-blind treatment period (originally 104 weeks) by 12 weeks in order to mitigate the impact of missed administrations and preserve the scientific integrity of the study by enabling more participants to receive study drug at the initially intended exposures. The continuing impact of the COVID-19 pandemic on study procedures was closely monitored and, if there were greater than anticipated disruptions to study drug administration, the amendment also allowed the option of further extending the double blind treatment period by another 12 weeks (to 128 weeks). For the same reason, the upper limit of the sample size was increased from 1140 to 1322 participants. This further extension of the double-blind treatment period to 128 weeks was not implemented, nor was the sample size increased.
04 August 2021	The purpose of this protocol amendment was to update the list of exploratory endpoints for the double-blind treatment period of the study and introduce the estimands approach for the primary analysis to align with the addendum to ICH E9 guidance (ICH E9). An update of the overall benefit-risk summary to address the impact of the COVID-19 pandemic was also made.

Notes:

Interruptions (globally)

Were there any global interruptions to the trial? Yes

Date	Interruption	Restart date
11 November 2022	Following results of a pre-planned primary analysis of the safety and efficacy of Gant in Graduate I&II (WN29922/WN39658) a decision was made to terminate development of Gantenerumab for treatment of prodromal/mild/early stage Alzheimer's disease.	-
