

## Clinical trial results:

### A phase II randomised placebo controlled double blinded trial of Interleukin 1 blockade in Acute Severe Colitis

#### Summary

EudraCT number	2017-001389-10
Trial protocol	GB
Global end of trial date	24 September 2021

#### Results information

Result version number	v1 (current)
This version publication date	11 October 2022
First version publication date	11 October 2022
Summary attachment (see zip file)	IASO Protocol Version 3.0 dated 30Oct18 (IASO protocol v3.0 301018 (Clean).pdf)

#### Trial information

##### Trial identification

Sponsor protocol code	IASO CCTU-0165 RG81897

Notes:

---

**Paediatric regulatory details**

---

Is trial part of an agreed paediatric investigation plan (PIP)	No
Does article 45 of REGULATION (EC) No 1901/2006 apply to this trial?	No
Does article 46 of REGULATION (EC) No 1901/2006 apply to this trial?	No

Notes:

---

**Results analysis stage**

---

Analysis stage	Final
Date of interim/final analysis	23 May 2022
Is this the analysis of the primary completion data?	Yes
Primary completion date	18 March 2021
Global end of trial reached?	Yes
Global end of trial date	24 September 2021
Was the trial ended prematurely?	Yes

Notes:

---

**General information about the trial**

---

Main objective of the trial:

The aim of this trial is to compare the clinical effects of anakinra with placebo when given in addition to current standard care in patients with acute severe ulcerative colitis.

The primary measure of success will be any difference in the proportion of participants in the group receiving anakinra who needed escalation to more intensive medical or surgical therapy (known as rescue therapy) by 10 days after standard treatment was started, when compared with the group of participants receiving placebo.

Protection of trial subjects:

The TSC (Trial Steering Committee) provided overall supervision with respect to the conduct of the study. Dr Oliver Brain was the independent chairman.

The ethical and safety aspects of the trial were overseen by an independent DMC which was chaired by Dr Peter Irving. DMC meetings were timed so that reports could be fed into the TSC meetings.

Background therapy: -

Evidence for comparator: -

Actual start date of recruitment	01 November 2017
Long term follow-up planned	No
Independent data monitoring committee (IDMC) involvement?	Yes

Notes:

---

**Population of trial subjects**

---

**Subjects enrolled per country**

---

Country: Number of subjects enrolled	United Kingdom: 113
Worldwide total number of subjects	113
EEA total number of subjects	0

Notes:

<b>Subjects enrolled per age group</b>	
In utero	0
Preterm newborn - gestational age < 37 wk	0
Newborns (0-27 days)	0
Infants and toddlers (28 days-23 months)	0
Children (2-11 years)	0
Adolescents (12-17 years)	1
Adults (18-64 years)	106
From 65 to 84 years	6
85 years and over	0

## Subject disposition

### Recruitment

Recruitment details:

Initially 214 patients from approximately 20 UK NHS acute hospitals were planned to be recruited. However, due to futility of analysis after 100 patients had been recruited, the trial was terminated early, resulting in a total of 113 patients being recruited and analysed from May 2018 to February 2021.

### Pre-assignment

Screening details:

125 patients were assessed for eligibility. 12 people failed screening due to MTWSI score being too low, not ASUC, diagnosed endoscopy, did not meet the inclusion criteria, oral steroid less than 8 weeks ago, withdrew consent, and concurrent biologic. 113 patients were randomised.

### Pre-assignment period milestones

Number of subjects started	125 <sup>[1]</sup>
Number of subjects completed	113

### Pre-assignment subject non-completion reasons

Reason: Number of subjects	Consent withdrawn by subject: 1
Reason: Number of subjects	MTWSI too low: 6
Reason: Number of subjects	Not ASUC: 1
Reason: Number of subjects	Diagnosed endoscopy: 1
Reason: Number of subjects	Did not meet inclusion criteria: 1
Reason: Number of subjects	Oral steroid less than 8 weeks ago: 1
Reason: Number of subjects	Concurrent biologic: 1

Notes:

[1] - The number of subjects reported to have started the pre-assignment period are not the same as the worldwide number enrolled in the trial. It is expected that these numbers will be the same.

Justification: 125 patients were assessed for eligibility. However, due to the reasons stated, 12 failed screening, resulting in the 113 patients randomised and analysed. This is the worldwide number enrolled in the trial.

### Period 1

Period 1 title	Baseline
Is this the baseline period?	Yes
Allocation method	Randomised - controlled
Blinding used	Double blind
Roles blinded	Subject, Investigator, Monitor, Data analyst, Carer, Assessor

### Arms

Are arms mutually exclusive?	Yes
Arm title	Placebo

Arm description:

The placebo group will receive an injection with the same physical appearance as Anakinra to preserve blinding. They will also receive current standard of care.

Arm type	Placebo
Investigational medicinal product name	Placebo
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Injection
Routes of administration	Injection

Dosage and administration details:

Same physical appearance as the IMP. Given the same as the IMP.

<b>Arm title</b>	Anakinra
Arm description: Anakinra is a clear, colourless to white solution for injection which may contain some translucent-to-white particles of protein in the solution. Current standard of care will also be given.	
Arm type	Experimental
Investigational medicinal product name	Anakinra
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Injection
Routes of administration	Injection

Dosage and administration details:

Initial IV dose will be 100mg, and then subsequent SC dose will be 100mg for up to 10 doses as per administration schedule.

<b>Number of subjects in period 1</b>	Placebo	Anakinra
Started	55	58
Completed	55	58

## Period 2

Period 2 title	Day 10
Is this the baseline period?	No
Allocation method	Randomised - controlled
Blinding used	Double blind
Roles blinded	Subject, Investigator, Monitor, Data analyst, Carer, Assessor

## Arms

Are arms mutually exclusive?	Yes
<b>Arm title</b>	Placebo

Arm description:

The placebo group will receive an injection with the same physical appearance as Anakinra to preserve blinding. They will also receive current standard of care.

Arm type	Placebo
Investigational medicinal product name	Placebo
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Injection
Routes of administration	Injection

Dosage and administration details:

Same physical appearance as the IMP. Given the same as the IMP.

<b>Arm title</b>	Anakinra
Arm description: Anakinra is a clear, colourless to white solution for injection which may contain some translucent-to-white particles of protein in the solution. Current standard of care will also be given.	
Arm type	Experimental
Investigational medicinal product name	Anakinra
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Injection
Routes of administration	Injection

Dosage and administration details:

Initial IV dose will be 100mg, and then subsequent SC dose will be 100mg for up to 10 doses as per administration schedule.

<b>Number of subjects in period 2</b>	Placebo	Anakinra
Started	55	58
Completed	51	55
Not completed	4	3
Consent withdrawn by subject	4	2
Physician decision	-	1

### **Period 3**

Period 3 title	Day 98
Is this the baseline period?	No
Allocation method	Randomised - controlled
Blinding used	Double blind
Roles blinded	Subject, Investigator, Monitor, Data analyst, Carer, Assessor

### **Arms**

Are arms mutually exclusive?	Yes
<b>Arm title</b>	Placebo
Arm description: The placebo group will receive an injection with the same physical appearance as Anakinra to preserve blinding. They will also receive current standard of care.	
Arm type	Placebo

Investigational medicinal product name	Placebo
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Injection
Routes of administration	Injection
Dosage and administration details:	
Same physical appearance as the IMP. Given the same as the IMP.	
<b>Arm title</b>	Anakinra

Arm description:

Anakinra is a clear, colourless to white solution for injection which may contain some translucent-to-white particles of protein in the solution. Current standard of care will also be given.

Arm type	Experimental
Investigational medicinal product name	Anakinra
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Injection
Routes of administration	Injection

Dosage and administration details:

Initial IV dose will be 100mg, and then subsequent SC dose will be 100mg for up to 10 doses as per administration schedule.

<b>Number of subjects in period 3</b>	Placebo	Anakinra
Started	51	55
Completed	51	54
Not completed	0	1
Physician decision	-	1

## Baseline characteristics

### Reporting groups

Reporting group title	Placebo
Reporting group description:	
The placebo group will receive an injection with the same physical appearance as Anakinra to preserve blinding. They will also receive current standard of care.	
Reporting group title	Anakinra
Reporting group description:	
Anakinra is a clear, colourless to white solution for injection which may contain some translucent-to-white particles of protein in the solution. Current standard of care will also be given.	

Reporting group values	Placebo	Anakinra	Total
Number of subjects	55	58	113
Age categorical			
Units: Subjects			
In utero			0
Preterm newborn infants (gestational age < 37 wks)			0
Newborns (0-27 days)			0
Infants and toddlers (28 days-23 months)			0
Children (2-11 years)			0
Adolescents (12-17 years)			0
Adults (18-64 years)			0
From 65-84 years			0
85 years and over			0
Age continuous			
Created this variable by subtracting the birth date from the randomisation date. This is the age at randomisation.			
Units: years			
arithmetic mean	38.6	39.5	
standard deviation	± 14.2	± 15.1	-
Gender categorical			
Female or male			
Units: Subjects			
Female	25	21	46
Male	30	37	67
Therapy with immunomodulators or oral Janus kinase inhibitors			
This was a stratification factor.			
Units: Subjects			
Yes	16	18	34
No	39	40	79
Oral corticosteroids within 8 weeks prior to first dose of IV corticosteroids			
A stratification factor.			
Units: Subjects			
Yes	21	24	45
No	34	34	68
Current smoker			

Asked if they currently smoked.			
Units: Subjects			
Yes	6	8	14
No	49	50	99
Endoscopic MAYO score			
Where available			
Units: Subjects			
One	5	2	7
Two	12	16	28
Three	13	16	29
Not available	25	24	49
EQ5D: VAS score			
Baseline score summary of the EQ5D pain score.			
Units: unknown			
arithmetic mean	46.4	44.3	
standard deviation	± 19.2	± 19.7	-
EQ5D: Utility score			
Baseline EQ5D score of utility.			
Units: unknown			
arithmetic mean	0.588	0.561	
standard deviation	± 0.209	± 0.228	-
MTWSI score			
Modified Truelove Witts severity index score at baseline.			
Units: unknown			
arithmetic mean	14	14.3	
standard deviation	± 2.25	± 2.24	-
CUCQ-32 score			
CUCQ-32 is a questionnaire. This is the baseline summary score.			
Units: unknown			
arithmetic mean	164	162	
standard deviation	± 40.3	± 43.5	-
Duration of disease prior to randomisation			
Units: year			
arithmetic mean	5.78	5.83	
standard deviation	± 7.16	± 7.83	-

## End points

### End points reporting groups

Reporting group title	Placebo
Reporting group description: The placebo group will receive an injection with the same physical appearance as Anakinra to preserve blinding. They will also receive current standard of care.	
Reporting group title	Anakinra
Reporting group description: Anakinra is a clear, colourless to white solution for injection which may contain some translucent-to-white particles of protein in the solution. Current standard of care will also be given.	
Reporting group title	Placebo

### Primary: Need for rescue therapy or colectomy

End point title	Need for rescue therapy or colectomy
End point description: If day 10 assessments were performed, the variable would be yes if the time difference between rescue therapy and first IV corticosteroid is <10 days and they answered yes to having had medical or surgical rescue therapy. The variable would be "no" if they did not have medical or surgical rescue therapy or the time difference was >10 days. If no day 10 assessment was performed, the endpoint was missing.	
End point type	Primary
End point timeframe: The endpoint is need for rescue therapy or colectomy up to day 10.

## Statistical analyses

<b>Statistical analysis title</b>	Logistic regression model 1
Statistical analysis description:	
The absolute risk difference will be estimated for the incidence rate of the need for medical or surgical rescue therapy within 10 days between the treatment arms. 3 separate logistic regression models will be fit. One without stratification factors. One adjusting for stratification factors, and one with the stratification factors and prior diagnosis of IBD.	
Comparison groups	Placebo v Anakinra
Number of subjects included in analysis	104
Analysis specification	Pre-specified
Analysis type	other
Parameter estimate	Risk difference (RD)
Point estimate	0.166
Confidence interval	
level	95 %
sides	2-sided
lower limit	-0.016
upper limit	0.341

<b>Statistical analysis title</b>	Logistic regression model 2
Statistical analysis description:	
The absolute risk difference will be estimated for the incidence rate of the need for medical or surgical rescue therapy within 10 days between the treatment arms. 3 separate logistic regression models will be fit. Model 1 without stratification factors. Model 2 adjusting for stratification factors, and model 3 with the stratification factors and prior diagnosis of IBD.	
Comparison groups	Placebo v Anakinra
Number of subjects included in analysis	104
Analysis specification	Pre-specified
Analysis type	other
Parameter estimate	Risk difference (RD)
Point estimate	0.17
Confidence interval	
level	95 %
sides	2-sided
lower limit	-0.008
upper limit	0.339

<b>Statistical analysis title</b>	Logistic regression model 3
Statistical analysis description:	
The absolute risk difference will be estimated for the incidence rate of the need for medical or surgical rescue therapy within 10 days between the treatment arms. 3 separate logistic regression models will be	

fit. Model 1 without stratification factors. Model 2 adjusting for stratification factors, and model 3 with the stratification factors and prior diagnosis of IBD.

Comparison groups	Placebo v Anakinra
Number of subjects included in analysis	104
Analysis specification	Pre-specified
Analysis type	other
Parameter estimate	Risk difference (RD)
Point estimate	0.143
Confidence interval	
level	95 %
sides	2-sided
lower limit	-0.041
upper limit	0.324

## Secondary: Colectomy within 98 days

End point title	Colectomy within 98 days
End point description:	
If day 98 assessment was performed, the variable was "yes" if colectomy was performed and the time difference was <98 days. The variable was "no" if colectomy was not performed or the time difference was >98 days. If no day 98 assessment was performed, the value would be missing.	
End point type	Secondary
End point timeframe:	
98 days following first IV corticosteroid.	

End point values	Placebo	Anakinra		
Subject group type	Reporting group	Reporting group		
Number of subjects analysed	50	54		
Units: People				
Yes	2	6		
No	48	48		

## Statistical analyses

Statistical analysis title	Logistic regression model 1
Statistical analysis description:	
The incidence of colectomy will be compared in a logistic regression model to estimate the effect of treatment with anakinra. The log odds ratio will be estimated. Model 1 contains only treatment arm, and model 2 contains the stratification factors as well.	
Comparison groups	Placebo v Anakinra

Number of subjects included in analysis	104
Analysis specification	Pre-specified
Analysis type	other
Parameter estimate	Log odds ratio
Point estimate	1.099
Confidence interval	
level	95 %
sides	2-sided
lower limit	-0.425
upper limit	3.053

<b>Statistical analysis title</b>	Logistic regression model 2
-----------------------------------	-----------------------------

Statistical analysis description:

The incidence of colectomy will be compared in a logistic regression model to estimate the effect of treatment with anakinra. The log odds ratio will be estimated. Model 1 contains only treatment arm, and model 2 contains the stratification factors as well.

Comparison groups	Placebo v Anakinra
Number of subjects included in analysis	104
Analysis specification	Pre-specified
Analysis type	other
Parameter estimate	Log odds ratio
Point estimate	1.106
Confidence interval	
level	95 %
sides	2-sided
lower limit	-0.432
upper limit	3.07

## Secondary: Time to clinical response

End point title	Time to clinical response
-----------------	---------------------------

End point description:

Time to clinical response is date from the first IV corticosteroid to clinical response.

Events: patients who had two consecutive days with MTWSI<10 without missing any assessments prior to the event; the date of first assessment of these two consecutive days will be used in the time to clinical response.

Censoring: date of the last consecutive assessment day 0.5 if day 1 assessment was missing; patients who had two consecutive days with MTWSI<10 but with missing assessment before will be censored at the last consecutive assessment.

End point type	Secondary
----------------	-----------

End point timeframe:

Date of first MTWSI assessment or last consecutive assessment.

End point values	Placebo	Anakinra		
Subject group type	Reporting group	Reporting group		
Number of subjects analysed	53	57		
Units: day				
number (not applicable)	53	57		

<b>Attachments (see zip file)</b>	Kaplan-Meier curve/fig_6.14.png
-----------------------------------	---------------------------------

## Statistical analyses

<b>Statistical analysis title</b>	Cox model
-----------------------------------	-----------

Statistical analysis description:

Cox model for the time to clinical response containing the stratification factors and treatment group. The result for treatment group will be given.

Comparison groups	Placebo v Anakinra
Number of subjects included in analysis	110
Analysis specification	Pre-specified
Analysis type	other
P-value	= 0.27 <sup>[1]</sup>
Method	Regression, Cox
Parameter estimate	Log hazard ratio
Point estimate	0.28
Confidence interval	
level	95 %
sides	2-sided
lower limit	-0.21
upper limit	0.77
Variability estimate	Standard error of the mean
Dispersion value	0.25

Notes:

[1] - For no therapy with immunomodulators, the p-value was 0.73, and for no oral corticosteroids, the p-value was 0.45

## Secondary: Time to medical or surgical rescue therapy

<b>End point title</b>	Time to medical or surgical rescue therapy
------------------------	--

End point description:

Time to medical or surgical rescue therapy, measured according to the time after the first dose of IV corticosteroids until the time that rescue therapy occurs (using definitions as set out in primary endpoint). Data will be captured up to the same time point as the primary endpoint.

<b>End point type</b>	Secondary
-----------------------	-----------

End point timeframe:

Data will be captured up to day 10 assessment.

End point values	Placebo	Anakinra		
Subject group type	Reporting group	Reporting group		
Number of subjects analysed	50	54		
Units: day				
number (not applicable)	50	54		

<b>Attachments (see zip file)</b>	Kaplan-Meier curve/fig_6.16.png
-----------------------------------	---------------------------------

## Statistical analyses

<b>Statistical analysis title</b>	Cox model
-----------------------------------	-----------

Statistical analysis description:

For time to medical or surgical rescue therapy. The model contains the two stratification factors and treatment group. The estimate for treatment group will be presented.

Comparison groups	Placebo v Anakinra
Number of subjects included in analysis	104
Analysis specification	Pre-specified
Analysis type	other
P-value	= 0.17 <sup>[2]</sup>
Method	Regression, Cox
Parameter estimate	Log hazard ratio
Point estimate	0.47
Confidence interval	
level	95 %
sides	2-sided
lower limit	-0.2
upper limit	1.13
Variability estimate	Standard error of the mean
Dispersion value	0.34

Notes:

[2] - For no therapy, the p-value was 0.16. For no oral corticosteroids, the p-value was 0.19.

## Secondary: Burden of MTWSI

End point title	Burden of MTWSI
-----------------	-----------------

End point description:

End point type	Secondary
----------------	-----------

End point timeframe:

The average MTWSI was assessed in a mixed model. This was measured from baseline to day 5.

<b>End point values</b>	Placebo	Anakinra		
Subject group type	Reporting group	Reporting group		
Number of subjects analysed	52	57		
Units: unit(s)				
number (not applicable)	52	57		

## Statistical analyses

<b>Statistical analysis title</b>	Random effects mixed model
Statistical analysis description:	
To test the burden of MTWSI, a random effects mixed model for repeated measurements will be fitted. The fixed effects will include treatment allocation, baseline MTWSI, time of assessments (days 1-5), and an interaction between treatment allocation and time. The dependent variable will be the total MTWSI score repeated from days 1 to 5. A random intercept will be fitted to allow the average MTWSI score to be higher or lower for each individual.	
Comparison groups	Placebo v Anakinra
Number of subjects included in analysis	109
Analysis specification	Pre-specified
Analysis type	other
P-value	= 0.83
Method	Mixed models analysis
Parameter estimate	Mean difference (final values)
Point estimate	-0.14
Confidence interval	
level	95 %
sides	2-sided
lower limit	-1.45
upper limit	1.17
Variability estimate	Standard error of the mean
Dispersion value	0.67

## Adverse events

### Adverse events information

Timeframe for reporting adverse events:

Up to Day 10. Expected AEs or SAEs as follows did not require expedited reporting:

- Diarrhoea/worsening diarrhoea
- Abdominal pain/increased abdominal pain
- Rectal pain/worsening rectal pain
- Development of toxic megacolon or hypoalbuminaemia

Adverse event reporting additional description:

Reportable SAEs/SARs were defined as any untoward medical occurrence that at any dose:

- Results in death
- Is life-threatening
- Requires hospitalisation or prolongation of inpatients' hospitalisation
- Results in persistent or significant disability or incapacity
- Is a congenital anomaly or birth defect
- Is an important medical event

Assessment type	Non-systematic

## More information

### Substantial protocol amendments (globally)

Were there any global substantial amendments to the protocol? Yes

Date	Amendment
31 May 2018	Amendment 3 - Updated protocol to v2.0 to reflect the addition of more sites in the initial phase of the trial
18 January 2019	Amendment 4 - Addition of new sites
12 March 2019	Amendment 5 - Addition of new sites
04 April 2019	Amendment 6 - Addition of new sites
22 May 2019	Amendment 7 - Addition of new site
10 June 2019	Amendment 8 - Addition of new site
01 July 2019	Amendment 9 - Addition of new site
24 September 2019	Amendment 10 - Addition of new site
13 January 2021	Amendment 12 - Change of PI at Cardiff site

Notes:

### Interruptions (globally)

Were there any global interruptions to the trial? Yes

Date	Interruption	Restart date
23 March 2020	Trial recruitment was delayed due to the COVID-19 lockdown, usually due to the reallocation of staff resources. The trial was not formally paused or restarted but this did have an impact.	-

Notes:

### Limitations and caveats

None reported
