

Clinical trial results:

A Phase 1b/2 Study to Evaluate Safety and Anti-Tumor Activity of Avelumab in Combination With the Poly (Adenosine Diphosphate [ADP]-Ribose)

Summary

EudraCT number	2017-001509-33
Trial protocol	BE HU DK GB
Global end of trial date	04 January 2023

Results information

Result version number	v1 (current)
This version publication date	14 September 2023
First version publication date	14 September 2023

Trial information

Trial identification

Sponsor protocol code	B9991025

Notes:

Paediatric regulatory details

Is trial part of an agreed paediatric investigation plan (PIP)	No
Does article 45 of REGULATION (EC) No 1901/2006 apply to this trial?	No
Does article 46 of REGULATION (EC) No 1901/2006 apply to this trial?	No

Notes:

Results analysis stage

Analysis stage	Final
Date of interim/final analysis	22 June 2023
Is this the analysis of the primary completion data?	No
Global end of trial reached?	Yes
Global end of trial date	04 January 2023
Was the trial ended prematurely?	Yes

Notes:

General information about the trial

Main objective of the trial:

To assess the dose limiting toxicity (DLT) rate of avelumab in combination with talazoparib in subjects with locally advanced or metastatic solid tumors in order to select the recommended Phase 2 dose (RP2D) of talazoparib for the combination, and to assess objective response rate (ORR) of avelumab in combination with talazoparib, as assessed by the investigator, per Response Evaluation Criteria in Solid Tumors, version 1.1 (RECIST v1.1) in subjects with locally advanced or metastatic solid tumors and per RECIST v1.1 and Prostate Cancer Working Group 3 (PCWG3) in subjects with metastatic castration resistant prostate cancer (mCRPC).

Protection of trial subjects:

The study was in compliance with the ethical principles derived from the Declaration of Helsinki and in compliance with all International Conference on Harmonisation (ICH) Good Clinical Practice (GCP) Guidelines. All the local regulatory requirements pertinent to safety of trial subjects were followed.

Background therapy: -

Evidence for comparator: -

Actual start date of recruitment	19 October 2017
Long term follow-up planned	Yes
Long term follow-up rationale	Safety, Efficacy
Long term follow-up duration	62 Months
Independent data monitoring committee (IDMC) involvement?	No

Notes:

Population of trial subjects

Subjects enrolled per country

Country: Number of subjects enrolled	Australia: 10
Country: Number of subjects enrolled	Belgium: 7
Country: Number of subjects enrolled	Canada: 7
Country: Number of subjects enrolled	Denmark: 11
Country: Number of subjects enrolled	Hungary: 9
Country: Number of subjects enrolled	Korea, Republic of: 10
Country: Number of subjects enrolled	Russian Federation: 43
Country: Number of subjects enrolled	United Kingdom: 9
Country: Number of subjects enrolled	United States: 117
Worldwide total number of subjects	223
EEA total number of subjects	27

Notes:

Subjects enrolled per age group	
In utero	0
Preterm newborn - gestational age < 37 wk	0
Newborns (0-27 days)	0
Infants and toddlers (28 days-23 months)	0
Children (2-11 years)	0
Adolescents (12-17 years)	0
Adults (18-64 years)	108
From 65 to 84 years	112
85 years and over	3

Subject disposition

Recruitment

Recruitment details:

The study was conducted in 2 phases: Phase 1b (talazoparib dose level cohorts) and Phase 2 (expansion phase). Phase 2 was conducted at the highest dose level of talazoparib which was determined safe for subjects in Phase 1b.

Pre-assignment

Screening details:

Phase 1b: 12 subjects were enrolled and assigned to study treatment. Phase 2: 211 subjects were enrolled and assigned to study treatment.

Period 1

Period 1 title	Overall Study (Treatment Phase) (overall period)
Is this the baseline period?	Yes
Allocation method	Not applicable
Blinding used	Not blinded

Arms

Are arms mutually exclusive?	Yes
Arm title	Phase 1b: Avelumab 800 mg Q2W + Talazoparib 1 mg QD

Arm description:

Subjects with locally advanced or metastatic solid tumors were treated with talazoparib 1.0 mg orally once daily (QD) in combination with avelumab 800 mg intravenously (IV) every 2 weeks (Q2W) for a maximum of 246.3 weeks. Safety follow-up was for 90 days after last dose of study treatment or until time of initiation of new anticancer treatment, whichever comes first.

Arm type	Experimental
Investigational medicinal product name	Avelumab 800 mg
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Concentrate for solution for injection/infusion
Routes of administration	Intravenous use

Dosage and administration details:

Subjects received avelumab 800 mg as an IV infusion over 1 hour every 2 weeks on Day 1 and Day 15 of each 28-day cycle.

Investigational medicinal product name	Talazoparib 1 mg
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Capsule
Routes of administration	Oral use

Dosage and administration details:

Subjects received talazoparib 1 mg orally QD.

Arm title	Phase 2: Cohort A1 (NSCLC)
------------------	----------------------------

Arm description:

Subjects with locally advanced (primary or recurrent) or metastatic non-small cell lung cancer (NSCLC) were treated with talazoparib 1 mg QD orally in combination with avelumab 800 mg IV Q2W for a maximum of 183.6 weeks. Safety follow-up was for 90 days after last dose of study treatment or until time of initiation of new anticancer treatment, whichever comes first.

Arm type	Experimental
----------	--------------

Investigational medicinal product name	Talazoparib 1 mg
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Capsule
Routes of administration	Oral use

Dosage and administration details:

Subjects received talazoparib 1 mg orally QD.

Investigational medicinal product name	Avelumab 800 mg
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Concentrate for solution for injection/infusion
Routes of administration	Intravenous use

Dosage and administration details:

Subjects received avelumab 800 mg as an IV infusion over 1 hour every 2 weeks on Day 1 and Day 15 of each 28-day cycle.

Arm title	Phase 2: Cohort A2 (NSCLC DDR+)
------------------	---------------------------------

Arm description:

Subjects with locally advanced (primary or recurrent) or metastatic NSCLC with DNA damage repair positive (DDR+) were treated with talazoparib 1 mg QD orally in combination with avelumab 800 mg IV Q2W for a maximum of 173.0 weeks. Safety follow-up was for 90 days after last dose of study treatment or until time of initiation of new anticancer treatment, whichever comes first.

Arm type	Experimental
Investigational medicinal product name	Talazoparib 1 mg
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Capsule
Routes of administration	Oral use

Dosage and administration details:

Subjects received talazoparib 1 mg orally QD.

Investigational medicinal product name	Avelumab 800 mg
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Concentrate for solution for injection/infusion
Routes of administration	Intravenous use

Dosage and administration details:

Subjects received avelumab 800 mg as an IV infusion over 1 hour every 2 weeks on Day 1 and Day 15 of each 28-day cycle.

Arm title	Phase 2: Cohort B1 (TNBC)
------------------	---------------------------

Arm description:

Subjects with locally advanced (primary or recurrent) or triple-negative breast cancer (TNBC) were treated with talazoparib 1 mg QD orally in combination with avelumab 800 mg IV Q2W for a maximum of 93.0 weeks. Safety follow-up was for 90 days after last dose of study treatment or until time of initiation of new anticancer treatment, whichever comes first.

Arm type	Experimental
Investigational medicinal product name	Talazoparib 1 mg
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Capsule
Routes of administration	Oral use

Dosage and administration details:

Subjects received talazoparib 1 mg orally QD.

Investigational medicinal product name	Avelumab 800 mg
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Concentrate for solution for injection/infusion
Routes of administration	Intravenous use
Dosage and administration details:	
Subjects received avelumab 800 mg as an IV infusion over 1 hour every 2 weeks on Day 1 and Day 15 of each 28-day cycle.	
Arm title	Phase 2: Cohort B2 (BC HR+ HER2- DDR+)
Arm description:	
Subjects with locally advanced (primary or recurrent) or metastatic hormone receptor positive (HR+)/human epidermal growth factor receptor 2 negative (HER2-) breast cancer (BC) with DDR+ were treated with talazoparib 1 mg QD orally in combination with avelumab 800 mg IV Q2W for a maximum of 180.0 weeks. Safety follow-up was for 90 days after last dose of study treatment or until time of initiation of new anticancer treatment, whichever comes first.	
Arm type	Experimental
Investigational medicinal product name	Talazoparib 1 mg
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Capsule
Routes of administration	Oral use
Dosage and administration details:	
Subjects received talazoparib 1 mg orally QD.	
Investigational medicinal product name	Avelumab 800 mg
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Concentrate for solution for injection/infusion
Routes of administration	Intravenous use
Dosage and administration details:	
Subjects received avelumab 800 mg as an IV infusion over 1 hour every 2 weeks on Day 1 and Day 15 of each 28-day cycle.	
Arm title	Phase 2: Cohort C1 (OVC)
Arm description:	
Subjects with locally advanced (primary or recurrent) or metastatic ovarian cancer (OVC) were treated with talazoparib 1 mg QD orally in combination with avelumab 800 mg IV Q2W for a maximum of 161.1 weeks. Safety follow-up was for 90 days after last dose of study treatment or until time of initiation of new anticancer treatment, whichever comes first.	
Arm type	Experimental
Investigational medicinal product name	Talazoparib 1 mg
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Capsule
Routes of administration	Oral use
Dosage and administration details:	
Subjects received talazoparib 1 mg orally QD.	
Investigational medicinal product name	Avelumab 800 mg
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Concentrate for solution for injection/infusion
Routes of administration	Intravenous use
Dosage and administration details:	
Subjects received avelumab 800 mg as an IV infusion over 1 hour every 2 weeks on Day 1 and Day 15 of each 28-day cycle.	
Arm title	Phase 2: Cohort C2 (OVC BRCA-mutated)

Arm description:

Subjects with locally advanced (primary or recurrent) or metastatic OVC with germline or somatic BRCA1 or BRCA2 gene defect were treated with talazoparib 1 mg QD orally in combination with avelumab 800 mg IV Q2W for a maximum of 144.0 weeks. Safety follow-up was for 90 days after last dose of study treatment or until time of initiation of new anticancer treatment, whichever comes first.

Arm type	Experimental
Investigational medicinal product name	Talazoparib 1 mg
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Capsule
Routes of administration	Oral use

Dosage and administration details:

Subjects received talazoparib 1 mg orally QD.

Investigational medicinal product name	Avelumab 800 mg
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Concentrate for solution for injection/infusion
Routes of administration	Intravenous use

Dosage and administration details:

Subjects received avelumab 800 mg as an IV infusion over 1 hour every 2 weeks on Day 1 and Day 15 of each 28-day cycle.

Arm title	Phase 2: Cohort D (UC)
------------------	------------------------

Arm description:

Subjects with locally advanced (primary or recurrent) or metastatic urothelial cancer (UC) were treated with talazoparib 1 mg QD orally in combination with avelumab 800 mg IV Q2W for a maximum of 164.0 weeks. Safety follow-up was for 90 days after last dose of study treatment or until time of initiation of new anticancer treatment, whichever comes first.

Arm type	Experimental
Investigational medicinal product name	Talazoparib 1 mg
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Capsule
Routes of administration	Oral use

Dosage and administration details:

Subjects received talazoparib 1 mg orally QD.

Investigational medicinal product name	Avelumab 800 mg
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Concentrate for solution for injection/infusion
Routes of administration	Intravenous use

Dosage and administration details:

Subjects received avelumab 800 mg as an IV infusion over 1 hour every 2 weeks on Day 1 and Day 15 of each 28-day cycle.

Arm title	Phase 2: Cohort E1 (mCRPC)
------------------	----------------------------

Arm description:

Subjects with metastatic castration-resistant prostate cancer (mCRPC) were treated with talazoparib 1 mg QD orally in combination with avelumab 800 mg IV Q2W for a maximum of 54.1 weeks. Safety follow-up was for 90 days after last dose of study treatment or until time of initiation of new anticancer treatment, whichever comes first.

Arm type	Experimental
----------	--------------

Investigational medicinal product name	Talazoparib 1 mg
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Capsule
Routes of administration	Oral use

Dosage and administration details:

Subjects received talazoparib 1 mg orally QD.

Investigational medicinal product name	Avelumab 800 mg
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Concentrate for solution for injection/infusion
Routes of administration	Intravenous use

Dosage and administration details:

Subjects received avelumab 800 mg as an IV infusion over 1 hour every 2 weeks on Day 1 and Day 15 of each 28-day cycle.

Arm title	Phase 2: Cohort E2 (mCRPC DDR+)
------------------	---------------------------------

Arm description:

Subjects with mCRPC with DDR+ were treated with talazoparib 1 mg QD orally in combination with avelumab 800 mg IV Q2W for a maximum of 74.0 weeks. Safety follow-up was for 90 days after last dose of study treatment or until time of initiation of new anticancer treatment, whichever comes first.

Arm type	Experimental
Investigational medicinal product name	Talazoparib 1 mg
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Capsule
Routes of administration	Oral use

Dosage and administration details:

Subjects received talazoparib 1 mg orally QD.

Investigational medicinal product name	Avelumab 800 mg
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Concentrate for solution for injection/infusion
Routes of administration	Intravenous use

Dosage and administration details:

Subjects received avelumab 800 mg as an IV infusion over 1 hour every 2 weeks on Day 1 and Day 15 of each 28-day cycle.

Arm title	Phase 2: Cohort F (BRCA/ATM-mutated)
------------------	--------------------------------------

Arm description:

Subjects with locally advanced (primary or recurrent) or metastatic solid tumors, independent of tissue of origin, with previously identified pathogenic, or likely pathogenic, germline or somatic defects in BRCA1, BRCA2, or ATM genes were treated with talazoparib 1 mg QD orally in combination with avelumab 800 mg IV Q2W for a maximum of 49.9 weeks. Safety follow-up was for 90 days after last dose of study treatment or until time of initiation of new anticancer treatment, whichever comes first.

Arm type	Experimental
Investigational medicinal product name	Talazoparib 1 mg
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Capsule
Routes of administration	Oral use

Dosage and administration details:

Subjects received talazoparib 1 mg orally QD.

Investigational medicinal product name	Avelumab 800 mg
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Concentrate for solution for injection/infusion
Routes of administration	Intravenous use

Dosage and administration details:

Subjects received avelumab 800 mg as an IV infusion over 1 hour every 2 weeks on Day 1 and Day 15 of each 28-day cycle.

Baseline characteristics

Reporting groups

Reporting group title	Phase 1b: Avelumab 800 mg Q2W + Talazoparib 1 mg QD
Reporting group description: Subjects with locally advanced or metastatic solid tumors were treated with talazoparib 1.0 mg orally once daily (QD) in combination with avelumab 800 mg intravenously (IV) every 2 weeks (Q2W) for a maximum of 246.3 weeks. Safety follow-up was for 90 days after last dose of study treatment or until time of initiation of new anticancer treatment, whichever comes first.	
Reporting group title	Phase 2: Cohort A1 (NSCLC)
Reporting group description: Subjects with locally advanced (primary or recurrent) or metastatic non-small cell lung cancer (NSCLC) were treated with talazoparib 1 mg QD orally in combination with avelumab 800 mg IV Q2W for a maximum of 183.6 weeks. Safety follow-up was for 90 days after last dose of study treatment or until time of initiation of new anticancer treatment, whichever comes first.	
Reporting group title	Phase 2: Cohort A2 (NSCLC DDR+)
Reporting group description: Subjects with locally advanced (primary or recurrent) or metastatic NSCLC with DNA damage repair positive (DDR+) were treated with talazoparib 1 mg QD orally in combination with avelumab 800 mg IV Q2W for a maximum of 173.0 weeks. Safety follow-up was for 90 days after last dose of study treatment or until time of initiation of new anticancer treatment, whichever comes first.	
Reporting group title	Phase 2: Cohort B1 (TNBC)
Reporting group description: Subjects with locally advanced (primary or recurrent) or triple-negative breast cancer (TNBC) were treated with talazoparib 1 mg QD orally in combination with avelumab 800 mg IV Q2W for a maximum of 93.0 weeks. Safety follow-up was for 90 days after last dose of study treatment or until time of initiation of new anticancer treatment, whichever comes first.	
Reporting group title	Phase 2: Cohort B2 (BC HR+ HER2- DDR+)
Reporting group description: Subjects with locally advanced (primary or recurrent) or metastatic hormone receptor positive (HR+)/human epidermal growth factor receptor 2 negative (HER2-) breast cancer (BC) with DDR+ were treated with talazoparib 1 mg QD orally in combination with avelumab 800 mg IV Q2W for a maximum of 180.0 weeks. Safety follow-up was for 90 days after last dose of study treatment or until time of initiation of new anticancer treatment, whichever comes first.	
Reporting group title	Phase 2: Cohort C1 (OVC)
Reporting group description: Subjects with locally advanced (primary or recurrent) or metastatic ovarian cancer (OVC) were treated with talazoparib 1 mg QD orally in combination with avelumab 800 mg IV Q2W for a maximum of 161.1 weeks. Safety follow-up was for 90 days after last dose of study treatment or until time of initiation of new anticancer treatment, whichever comes first.	
Reporting group title	Phase 2: Cohort C2 (OVC BRCA-mutated)
Reporting group description: Subjects with locally advanced (primary or recurrent) or metastatic OVC with germline or somatic BRCA1 or BRCA2 gene defect were treated with talazoparib 1 mg QD orally in combination with avelumab 800 mg IV Q2W for a maximum of 144.0 weeks. Safety follow-up was for 90 days after last dose of study treatment or until time of initiation of new anticancer treatment, whichever comes first.	
Reporting group title	Phase 2: Cohort D (UC)
Reporting group description: Subjects with locally advanced (primary or recurrent) or metastatic urothelial cancer (UC) were treated with talazoparib 1 mg QD orally in combination with avelumab 800 mg IV Q2W for a maximum of 164.0 weeks. Safety follow-up was for 90 days after last dose of study treatment or until time of initiation of new anticancer treatment, whichever comes first.	
Reporting group title	Phase 2: Cohort E1 (mCRPC)
Reporting group description: Subjects with metastatic castration-resistant prostate cancer (mCRPC) were treated with talazoparib 1 mg QD orally in combination with avelumab 800 mg IV Q2W for a maximum of 54.1 weeks. Safety follow-up was for 90 days after last dose of study treatment or until time of initiation of new anticancer treatment, whichever comes first.	
Reporting group title	Phase 2: Cohort E2 (mCRPC DDR+)

Reporting group description:

Subjects with mCRPC with DDR+ were treated with talazoparib 1 mg QD orally in combination with avelumab 800 mg IV Q2W for a maximum of 74.0 weeks. Safety follow-up was for 90 days after last dose of study treatment or until time of initiation of new anticancer treatment, whichever comes first.

Reporting group title	Phase 2: Cohort F (BRCA/ATM-mutated)
-----------------------	--------------------------------------

Reporting group description:

Subjects with locally advanced (primary or recurrent) or metastatic solid tumors, independent of tissue of origin, with previously identified pathogenic, or likely pathogenic, germline or somatic defects in BRCA1, BRCA2, or ATM genes were treated with talazoparib 1 mg QD orally in combination with avelumab 800 mg IV Q2W for a maximum of 49.9 weeks. Safety follow-up was for 90 days after last dose of study treatment or until time of initiation of new anticancer treatment, whichever comes first.

End points

End points reporting groups

Reporting group title	Phase 1b: Avelumab 800 mg Q2W + Talazoparib 1 mg QD
Reporting group description: Subjects with locally advanced or metastatic solid tumors were treated with talazoparib 1.0 mg orally once daily (QD) in combination with avelumab 800 mg intravenously (IV) every 2 weeks (Q2W) for a maximum of 246.3 weeks. Safety follow-up was for 90 days after last dose of study treatment or until time of initiation of new anticancer treatment, whichever comes first.	
Reporting group title	Phase 2: Cohort A1 (NSCLC)
Reporting group description: Subjects with locally advanced (primary or recurrent) or metastatic non-small cell lung cancer (NSCLC) were treated with talazoparib 1 mg QD orally in combination with avelumab 800 mg IV Q2W for a maximum of 183.6 weeks. Safety follow-up was for 90 days after last dose of study treatment or until time of initiation of new anticancer treatment, whichever comes first.	
Reporting group title	Phase 2: Cohort A2 (NSCLC DDR+)
Reporting group description: Subjects with locally advanced (primary or recurrent) or metastatic NSCLC with DNA damage repair positive (DDR+) were treated with talazoparib 1 mg QD orally in combination with avelumab 800 mg IV Q2W for a maximum of 173.0 weeks. Safety follow-up was for 90 days after last dose of study treatment or until time of initiation of new anticancer treatment, whichever comes first.	
Reporting group title	Phase 2: Cohort B1 (TNBC)
Reporting group description: Subjects with locally advanced (primary or recurrent) or triple-negative breast cancer (TNBC) were treated with talazoparib 1 mg QD orally in combination with avelumab 800 mg IV Q2W for a maximum of 93.0 weeks. Safety follow-up was for 90 days after last dose of study treatment or until time of initiation of new anticancer treatment, whichever comes first.	
Reporting group title	Phase 2: Cohort B2 (BC HR+ HER2- DDR+)
Reporting group description: Subjects with locally advanced (primary or recurrent) or metastatic hormone receptor positive (HR+)/human epidermal growth factor receptor 2 negative (HER2-) breast cancer (BC) with DDR+ were treated with talazoparib 1 mg QD orally in combination with avelumab 800 mg IV Q2W for a maximum of 180.0 weeks. Safety follow-up was for 90 days after last dose of study treatment or until time of initiation of new anticancer treatment, whichever comes first.	
Reporting group title	Phase 2: Cohort C1 (OVC)
Reporting group description: Subjects with locally advanced (primary or recurrent) or metastatic ovarian cancer (OVC) were treated with talazoparib 1 mg QD orally in combination with avelumab 800 mg IV Q2W for a maximum of 161.1 weeks. Safety follow-up was for 90 days after last dose of study treatment or until time of initiation of new anticancer treatment, whichever comes first.	
Reporting group title	Phase 2: Cohort C2 (OVC BRCA-mutated)
Reporting group description: Subjects with locally advanced (primary or recurrent) or metastatic OVC with germline or somatic BRCA1 or BRCA2 gene defect were treated with talazoparib 1 mg QD orally in combination with avelumab 800 mg IV Q2W for a maximum of 144.0 weeks. Safety follow-up was for 90 days after last dose of study treatment or until time of initiation of new anticancer treatment, whichever comes first.	
Reporting group title	Phase 2: Cohort D (UC)
Reporting group description: Subjects with locally advanced (primary or recurrent) or metastatic urothelial cancer (UC) were treated with talazoparib 1 mg QD orally in combination with avelumab 800 mg IV Q2W for a maximum of 164.0 weeks. Safety follow-up was for 90 days after last dose of study treatment or until time of initiation of new anticancer treatment, whichever comes first.	
Reporting group title	Phase 2: Cohort E1 (mCRPC)
Reporting group description: Subjects with metastatic castration-resistant prostate cancer (mCRPC) were treated with talazoparib 1 mg QD orally in combination with avelumab 800 mg IV Q2W for a maximum of 54.1 weeks. Safety follow-up was for 90 days after last dose of study treatment or until time of initiation of new anticancer treatment, whichever comes first.	

Reporting group title	Phase 2: Cohort E2 (mCRPC DDR+)
Reporting group description:	
Subjects with mCRPC with DDR+ were treated with talazoparib 1 mg QD orally in combination with avelumab 800 mg IV Q2W for a maximum of 74.0 weeks. Safety follow-up was for 90 days after last dose of study treatment or until time of initiation of new anticancer treatment, whichever comes first.	
Reporting group title	Phase 2: Cohort F (BRCA/ATM-mutated)
Reporting group description:	
Subjects with locally advanced (primary or recurrent) or metastatic solid tumors, independent of tissue of origin, with previously identified pathogenic, or likely pathogenic, germline or somatic defects in BRCA1, BRCA2, or ATM genes were treated with talazoparib 1 mg QD orally in combination with avelumab 800 mg IV Q2W for a maximum of 49.9 weeks. Safety follow-up was for 90 days after last dose of study treatment or until time of initiation of new anticancer treatment, whichever comes first.	
Subject analysis set title	Avelumab PK Concentration Analysis Set
Subject analysis set type	Sub-group analysis
Subject analysis set description:	
Subjects from Phase 1b and Phase 2 combined (excluding site 1055). Treatment = Avelumab 800 mg IV Infusion Q2W coadministered with Talazoparib 1 mg QD. This analysis set is for PK analysis only, and not applicable for baseline characteristics.	
Subject analysis set title	Talazoparib PK Concentration Analysis Set (1 mg QD)
Subject analysis set type	Sub-group analysis
Subject analysis set description:	
Subjects from Phase 1b and Phase 2 combined (excluding site 1055). Treatment = Avelumab 800 mg IV Infusion Q2W coadministered with Talazoparib 1 mg QD (subjects with normal renal function or mild renal impairment). This analysis set is for PK analysis only, and not applicable for baseline characteristics.	
Subject analysis set title	Talazoparib PK Concentration Analysis Set (0.75 mg QD)
Subject analysis set type	Sub-group analysis
Subject analysis set description:	
Subjects from Phase 1b and Phase 2 combined (excluding site 1055). Treatment = Avelumab 800 mg IV Infusion Q2W coadministered with Talazoparib 0.75 mg QD (subjects with moderate renal impairment). This analysis set is for PK analysis only, and not applicable for baseline characteristics.	
Subject analysis set title	Phase 2 All Cohorts Combined
Subject analysis set type	Sub-group analysis
Subject analysis set description:	
All subjects from Cohort A to Cohort F combined. Not applicable for baseline characteristics.	

Primary: Phase 1b: Number of Subjects with Dose Limiting Toxicities (DLTs)

End point title	Phase 1b: Number of Subjects with Dose Limiting Toxicities (DLTs) ^{[1][2]}
End point description:	
DLTs=any of the following adverse events (AEs) due to any study treatment in Cycle 1:Hematologic: grade(G)4 neutropenia >5 days (absolute neutrophil count [ANC]<0.5*10 ⁹ /L);febrile neutropenia;neutropenic infection (ANC<1.0*10 ⁹ /L and G>3 infection); G>=3 thrombocytopenia (platelet count [PC] <50.0*10 ⁹ /L) with bleeding; G4 thrombocytopenia (PC<25.0*10 ⁹ /L); G4 anemia (life-threatening;urgent intervention indicated). Non-hematologic: G>=3 toxicities unless predefined in the protocol; potential Hy's law cases. Non-adherence to treatment schedule: failure to deliver >=75% of the planned doses of talazoparib during Cycle 1 due to treatment-related toxicities;G3 non-hematologic toxicity that delayed either study drug for >=2 weeks. Dose reductions: any AE resulting in talazoparib dose reduction. The DLT analysis set included all eligible enrolled subjects in Phase 1b with >=1 dose of the combination who experienced DLT in Cycle 1 or completed the DLT

Primary: Phase 2: Percentage of Subjects With Confirmed Objective Response (OR) as per Response Evaluation Criteria in Solid Tumors (RECIST) Version (v) 1.1 by Investigator Assessment

End point title	Phase 2: Percentage of Subjects With Confirmed Objective Response (OR) as per Response Evaluation Criteria in Solid Tumors (RECIST) Version (v) 1.1 by Investigator Assessment ^[3] ^[4]
-----------------	--

End point description:

This outcome measure (OM) is reported for subjects with solid tumors except mCRPC; for those subjects, OR was defined as a complete response (CR) or partial response (PR) per Response Evaluation Criteria In Solid Tumors (RECIST) version(v) 1.1 by investigator. CR: Complete disappearance of all target and non-target lesions with the exception of nodal disease; all target and non-target nodes must decrease to normal size (short axis <10 mm); all lesions must be assessed. PR: $\geq 30\%$ decrease under baseline of the sum of diameters of all target measurable lesions; all target lesions must be assessed. Non-target PR lesions must be non-progressive disease (PD), where PD is unequivocal progression of pre-existing lesions. The full analysis set (FAS) included all enrolled subjects who received ≥ 1 dose of study treatment. Data for this OM was not planned to be collected and analyzed for Phase 1b arm. Here 'number of subjects analyzed' signifies subjects evaluable for this outcome measure.

End point type	Primary
----------------	---------

End point timeframe:

From start of the treatment until disease progression or death due to any cause, whichever occurred first (maximum up to 5.2 years approximately)

Notes:

Secondary: Number of Subjects with New or Worsening Hematology Laboratory Test Results to Grade ≥ 1 During the On-Treatment Period

End point title	Number of Subjects with New or Worsening Hematology Laboratory Test Results to Grade ≥ 1 During the On-Treatment Period ^[14]
-----------------	--

End point description:

The number of subjects with newly occurring or worsening hematology abnormalities during the on-treatment period were summarized by worst grade on-treatment. On-treatment period was defined as time from first dose of any study treatment and up to 30 days after last dose or start day of new anti-cancer drug therapy minus 1 day, whichever occurred first. NCI-CTCAE criteria version 4.03 is used. As per NCI CTCAE toxicity grading v4.03, Grade 1 = mild; Grade 2 = moderate; Grade 3 = severe; Grade 4 = life-threatening; Grade 5 = death. N=x, y in the following table represents the number of evaluable subjects in the reporting groups of Phase 1b and Phase 2. APTT=Activated partial thromboplastin time. The safety analysis set included all enrolled subjects who received at least 1 dose of study drug. Cohorts in Phase 2 were combined as pre-specified in reporting and analysis plan.

End point type	Secondary
----------------	-----------

End point timeframe:

From start of the treatment up to 30 days after last dose or start of new anticancer therapy minus 1 day, whichever occurred first (maximum up to 5.2 years approximately)

Notes:

[14] - The end point is not reporting statistics for all the arms in the baseline period. It is expected all the baseline period arms will be reported on when providing values for an end point on the baseline period.

Justification: The endpoint is reporting statistics for the arms specified.

End point values	Phase 1b: Avelumab 800 mg Q2W + Talazoparib 1 mg QD	Phase 2 All Cohorts Combined		
Subject group type	Reporting group	Subject analysis set		
Number of subjects analysed	12	211		
Units: Subjects

Adverse events

Adverse events information

Timeframe for reporting adverse events:

All-cause mortality: From start of the treatment (A) up to 90 days post last dose of study treatment (B), TEAEs and Serious TEAEs: From A up to 30 days post B or start of new anti-cancer drug therapy -1 day, whichever came first (<=about 5.2 years)

Adverse event reporting additional description:

Same event may appear as both an AE and SAE. However, what is presented are distinct events. Safety set (all subjects who received at least 1 dose of study drug) was evaluated. An event may be categorized as serious in one subject and as non-serious in another, or a subject may have experienced both a serious and non-serious event.

Assessment type	Non-systematic

Reporting groups

Reporting group title	Cohort A1 (NSCLC)
-----------------------	-------------------

Reporting group description:

Subjects with locally advanced (primary or recurrent) or metastatic non-small cell lung cancer (NSCLC) were treated with talazoparib 1 mg QD orally in combination with avelumab 800 mg IV Q2W for a maximum of 183.6 weeks. Safety follow-up was for 90 days after last dose of study treatment or until time of initiation of new anticancer treatment, whichever comes first.

Reporting group title	Avelumab 800 mg Q2W + Talazoparib 1 mg QD
-----------------------	---

Reporting group description:

Subjects with locally advanced or metastatic solid tumors were treated with talazoparib 1.0 mg orally once daily (QD) in combination with avelumab 800 mg intravenously (IV) every 2 weeks (Q2W) for a maximum of 246.3 weeks. Safety follow-up was for 90 days after last dose of study treatment or until time of initiation of new anticancer treatment, whichever comes first.

Reporting group title	Cohort B1 (TNBC)
-----------------------	------------------

Reporting group description:

Subjects with locally advanced (primary or recurrent) or triple-negative breast cancer (TNBC) were treated with talazoparib 1 mg QD orally in combination with avelumab 800 mg IV Q2W for a maximum of 93.0 weeks. Safety follow-up was for 90 days after last dose of study treatment or until time of initiation of new anticancer treatment, whichever comes first.

Reporting group title	Cohort A2 (NSCLC DDR+)
-----------------------	------------------------

Reporting group description:

Subjects with locally advanced (primary or recurrent) or metastatic NSCLC with DNA damage repair positive (DDR+) were treated with talazoparib 1 mg QD orally in combination with avelumab 800 mg IV Q2W for a maximum of 173.0 weeks. Safety follow-up was for 90 days after last dose of study treatment or until time of initiation of new anticancer treatment, whichever comes first.

Reporting group title	Cohort E1 (mCRPC)
-----------------------	-------------------

Reporting group description:

Subjects with metastatic castration-resistant prostate cancer (mCRPC) were treated with talazoparib 1 mg QD orally in combination with avelumab 800 mg IV Q2W for a maximum of 54.1 weeks. Safety follow-up was for 90 days after last dose of study treatment or until time of initiation of new anticancer treatment, whichever comes first.

Reporting group title	Cohort E2 (mCRPC DDR+)
-----------------------	------------------------

Reporting group description:

Subjects with mCRPC with DDR+ were treated with talazoparib 1 mg QD orally in combination with avelumab 800 mg IV Q2W for a maximum of 74.0 weeks. Safety follow-up was for 90 days after last dose of study treatment or until time of initiation of new anticancer treatment, whichever comes first.

Reporting group title	Cohort D (UC)
-----------------------	---------------

Reporting group description:

Subjects with locally advanced (primary or recurrent) or metastatic urothelial cancer (UC) were treated with talazoparib 1 mg QD orally in combination with avelumab 800 mg IV Q2W for a maximum of 164.0 weeks. Safety follow-up was for 90 days after last dose of study treatment or until time of initiation of

new anticancer treatment, whichever comes first.

Reporting group title	Cohort C2 (OVC BRCA-mutated)
Reporting group description:	
Subjects with locally advanced (primary or recurrent) or metastatic OVC with germline or somatic BRCA1 or BRCA2 gene defect were treated with talazoparib 1 mg QD orally in combination with avelumab 800 mg IV Q2W for a maximum of 144.0 weeks. Safety follow-up was for 90 days after last dose of study treatment or until time of initiation of new anticancer treatment, whichever comes first.	
Reporting group title	Cohort F (BRCA/ATM-mutated)
Reporting group description:	
Subjects with locally advanced (primary or recurrent) or metastatic solid tumors, independent of tissue of origin, with previously identified pathogenic, or likely pathogenic, germline or somatic defects in BRCA1, BRCA2, or ATM genes were treated with talazoparib 1 mg QD orally in combination with avelumab 800 mg IV Q2W for a maximum of 49.9 weeks. Safety follow-up was for 90 days after last dose of study treatment or until time of initiation of new anticancer treatment, whichever comes first.	
Reporting group title	Cohort B2 (BC HR+ HER2- DDR+)
Reporting group description:	
Subjects with locally advanced (primary or recurrent) or triple-negative breast cancer (TNBC) were treated with talazoparib 1 mg QD orally in combination with avelumab 800 mg IV Q2W for a maximum of 93.0 weeks. Safety follow-up was for 90 days after last dose of study treatment or until time of initiation of new anticancer treatment, whichever comes first.	
Reporting group title	Cohort C1 (OVC)
Reporting group description:	
Subjects with locally advanced (primary or recurrent) or metastatic ovarian cancer (OVC) were treated with talazoparib 1 mg QD orally in combination with avelumab 800 mg IV Q2W for a maximum of 161.1 weeks. Safety follow-up was for 90 days after last dose of study treatment or until time of initiation of new anticancer treatment, whichever comes first.	

Serious adverse events	Cohort A1 (NSCLC)	Avelumab 800 mg Q2W + Talazoparib 1 mg QD	Cohort B1 (TNBC)
Total subjects affected by serious adverse events			
subjects affected / exposed	16 / 42 (38.10%)	1 / 12 (8.33%)	7 / 22 (31.82%)
number of deaths (all causes)	33	6	16
number of deaths resulting from adverse events	3	0	1
Neoplasms benign, malignant and unspecified (incl cysts and polyps)			
Malignant neoplasm progression			
subjects affected / exposed	0 / 42 (0.00%)	0 / 12 (0.00%)	0 / 22 (0.00%)
occurrences causally related to treatment / all	0 / 0	0 / 0	0 / 0
deaths causally related to treatment / all	0 / 0	0 / 0	0 / 0
Neoplasm progression			
subjects affected / exposed	0 / 42 (0.00%)	0 / 12 (0.00%)	0 / 22 (0.00%)

More information

Substantial protocol amendments (globally)

Were there any global substantial amendments to the protocol? Yes

Date	Amendment
20 November 2018	<ul style="list-style-type: none">• Human epidermal growth factor receptor 2 negative requirement was added to inclusion criterion for hormone receptor positive breast cancer patients for clarity.• Flexibility in the target number of patients to be enrolled in the Phase 2 cohorts of the study was added to avoid a dedicated protocol amendment in case additional data are needed in a specific biomarker defined population.• The Schedule of Activities was updated to clarify procedures for patients who continue treatment beyond 2 years (Cycles >25) to lessen study participation burden for long term study participants. Serum/urine pregnancy test procedures are no longer required at Day 60 and Day 90 of Short Term Follow Up (only Day 30).• Physical exams are permitted to be performed 1 day prior to the scheduled visit to confirm any findings before dosing.• Permissible highly effective methods of contraception were updated as per current protocol standard, including the addition of sexual abstinence.• DDR defect status assessment procedures were revised to allow prospective and local (where applicable) testing of DDR defects.• Preliminary safety data from the Phase 1b portion of this study were added to Benefit/Risk Assessment.• In response to queries raised by the Ministry of Food and Drug Safety of South Korea for sites in South Korea only, specific eligibility criteria were restricted for Cohorts A1, B1, and D.• A DDR gene list has been added inclusion criteria for Cohorts A2, B2, and E2, to better define the DDR defect positive status required for eligibility.• Requirements for tumor assessments for progressive disease confirmation were removed.• A separate withdrawal of consent form is not applicable to this study and was removed from procedures.• Activated partial thromboplastin time assessment was permitted as an alternative to partial thromboplastin time. Prothrombin time was removed.

Notes:

Interruptions (globally)

Were there any global interruptions to the trial? No

Limitations and caveats

None reported
