

Clinical trial results:

A Phase 3, Randomized, Double-Blind, Saline Placebo- and Active-Controlled, Multicenter Study of HTX-011 via Local Administration for Postoperative Analgesia and Decreased Opioid Use Following Unilateral Open Inguinal Herniorrhaphy.

Summary

EudraCT number	2017-001636-19
Trial protocol	BE
Global end of trial date	29 January 2018

Results information

Result version number	v1 (current)
This version publication date	15 February 2019
First version publication date	15 February 2019

Notes:

Paediatric regulatory details

Is trial part of an agreed paediatric investigation plan (PIP)	No
Does article 45 of REGULATION (EC) No 1901/2006 apply to this trial?	No
Does article 46 of REGULATION (EC) No 1901/2006 apply to this trial?	No

Notes:

Results analysis stage

Analysis stage	Final
Date of interim/final analysis	13 March 2018
Is this the analysis of the primary completion data?	Yes
Primary completion date	22 December 2017
Global end of trial reached?	Yes
Global end of trial date	29 January 2018
Was the trial ended prematurely?	No

Notes:

General information about the trial

Main objective of the trial:

To compare the efficacy and duration of analgesia following local administration of HTX-011 with saline placebo during the first 72 hours following unilateral open inguinal herniorrhaphy.

Protection of trial subjects:

This study was conducted in compliance with the protocol and all applicable regulatory requirements in accordance with International Council for Harmonisation (ICH)/Good Clinical Practice (GCP) and in general conformity with the most recent version of the Declaration of Helsinki.

Background therapy: -

Evidence for comparator: -

Actual start date of recruitment	31 July 2017
Long term follow-up planned	No
Independent data monitoring committee (IDMC) involvement?	No

Notes:

Population of trial subjects**Subjects enrolled per country**

Country: Number of subjects enrolled	Belgium: 4
Country: Number of subjects enrolled	United States: 414
Worldwide total number of subjects	418
EEA total number of subjects	4

Notes:

Subjects enrolled per age group

In utero	0
Preterm newborn - gestational age < 37 wk	0
Newborns (0-27 days)	0
Infants and toddlers (28 days-23 months)	0
Children (2-11 years)	0
Adolescents (12-17 years)	0
Adults (18-64 years)	387
From 65 to 84 years	31
85 years and over	0

Subject disposition

Recruitment

Recruitment details: -

Pre-assignment

Screening details:

Subjects were screened within 28 days prior to surgery. Subjects who met the Screening eligibility criteria were randomized.

Period 1

Period 1 title	Overall Study (overall period)
Is this the baseline period?	Yes
Allocation method	Randomised - controlled
Blinding used	Double blind
Roles blinded	Subject, Investigator, Monitor, Data analyst, Carer, Assessor

Arms

Are arms mutually exclusive?	Yes
Arm title	Treatment Group 1

Arm description:

HTX-011, 2.5%/0.075% (bupivacaine/meloxicam doses), 10.3 mL, via instillation into the surgical site.

Arm type	Experimental
Investigational medicinal product name	HTX-011
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Prolonged-release solution for injection
Routes of administration	Local use

Dosage and administration details:

HTX-011, 2.5%/0.075% (bupivacaine/meloxicam doses), 10.3 mL, via instillation into the surgical site.

Arm title	Treatment Group 2
------------------	-------------------

Arm description:

Bupivacaine HCl without epinephrine 0.25%, 75 mg (30 mL), via injection into the surgical site.

Arm type	Active comparator
Investigational medicinal product name	Bupivacaine hydrochloride, USP
Investigational medicinal product code	
Other name	Bupivacaine HCl
Pharmaceutical forms	Solution for injection
Routes of administration	Intramuscular use, Subcutaneous use

Dosage and administration details:

Bupivacaine HCl without epinephrine 0.25%, 75 mg (30 mL), via injection into the surgical site.

Arm title	Treatment Group 3
------------------	-------------------

Arm description:

Saline placebo, 10.3 mL, via instillation into the surgical site.

Arm type	Placebo
Investigational medicinal product name	Saline Placebo
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Solution for injection
Routes of administration	Local use

Dosage and administration details:

Saline placebo, 10.3 mL, via instillation into the surgical site.

Number of subjects in period 1	Treatment Group 1	Treatment Group 2	Treatment Group 3
Started	164	172	82
Completed	159	170	81
Not completed	5	2	1
Consent withdrawn by subject	3	2	1
Lost to follow-up	1	-	-
Protocol deviation	1	-	-

More information

Substantial protocol amendments (globally)

Were there any global substantial amendments to the protocol? Yes

Date	Amendment
29 June 2017	<p>The primary changes in this amendment are presented below:</p> <ul style="list-style-type: none">• Revised the key secondary efficacy endpoints as follows:<ul style="list-style-type: none">- Moved the endpoint on mean AUC0-72 of the NRS-A for HTX-011 vs bupivacaine HCl to be the first (#1) key secondary endpoint.- Added a key secondary endpoint (#3) on the proportion of subjects who are opioid-free through 72 hours for HTX-011 vs bupivacaine HCl.- Moved the endpoint on mean total postoperative opioid consumption through 72 hours for HTX-011 compared with bupivacaine HCl to be a key secondary efficacy endpoint (#4).- Revised the analysis plan for testing key secondary endpoints to be hierarchical testing.• Reduced the number of other (non-key) secondary efficacy endpoints.• Moved the secondary study objective on efficacy and duration of analgesia for HTX-011 vs bupivacaine HCl to be the first secondary objective.• Increased the sample size of the HTX-011 group (from 150 subjects to 200 subjects) and the bupivacaine HCl group (from 100 subjects to 200 subjects).• Increased the volume of saline placebo to be administered (from 6.8 mL to 10.3 mL).• Revised instructions on administering HTX-011 and saline placebo via instillation.• Added acetaminophen as a rescue medication.• Removed acetaminophen from the list of prohibited medications.• Revised the instructions for postoperative pain management after 72 hours and included an appendix with discharge instructions for subjects who were medically ready for discharge.• Added an exclusion criterion for systemic steroids administered within 5 half-lives or 10 days prior to administration of study drug, whichever was longer (exclusion criterion #12).• Clarified the prescribed activity for NRS-A.• Clarified how to perform NRS-R assessments.
30 July 2017	<p>The primary changes in this amendment are presented below:</p> <ul style="list-style-type: none">• Reduced the study sample size from 500 subjects to 400 subjects. The randomization scheme will remain the same.• Added Local Anesthetic Systemic Toxicity (LAST) assessments.• Added body temperature measurement and increased the number of vital sign assessment timepoints.• Specified the route of administration for acetaminophen (oral) as a rescue medication for postoperative pain.• Clarified that intraoperative safety monitoring would be in accordance with ASA standards, which is consistent with the European Board of Anaesthesiology (EBA) recommendations for minimal monitoring during Anaesthesia and Recovery.• Clarified study suspension and study stopping criteria.• Provided rationale for fentanyl dosing during surgery.• Provided additional details regarding Sponsor safety oversight.

Notes:

Interruptions (globally)

Were there any global interruptions to the trial? No
