

Clinical trial results:

A randomized, double-blind, placebo-controlled, multi-centre phase IIa study evaluating the safety and tolerability of IRL752 in patients with Parkinson's Disease Dementia.

Summary

EudraCT number	2017-001673-17
Trial protocol	SE FI
Global end of trial date	25 May 2018

Results information

Result version number	v1 (current)
This version publication date	14 June 2019
First version publication date	14 June 2019

Trial information

Trial identification

Sponsor protocol code	IRL752C002

Notes:

Paediatric regulatory details

Is trial part of an agreed paediatric investigation plan (PIP)	No
Does article 45 of REGULATION (EC) No 1901/2006 apply to this trial?	No
Does article 46 of REGULATION (EC) No 1901/2006 apply to this trial?	No

Notes:

Results analysis stage

Analysis stage	Final
Date of interim/final analysis	25 June 2018
Is this the analysis of the primary completion data?	Yes
Primary completion date	25 May 2018
Global end of trial reached?	Yes
Global end of trial date	25 May 2018
Was the trial ended prematurely?	No

Notes:

General information about the trial

Main objective of the trial:

To evaluate the safety and tolerability of IRL752 after repeated dosing in patients with Parkinson's Disease Dementia (PDD).

Protection of trial subjects:

The ICF included information that data would be recorded, collected and processed and could be transferred to European Economic Area (EEA) or non-EEA countries. In accordance with the EU Data Protection Directive (95/46/EC), the data would not identify any patients taking part in the study. The potential study patient (and/or LAR, as applicable) and his/her caregiver were informed that by signing the ICF he/she/they approved that authorized representatives from Sponsor and CTC Clinical Trial Consultant AB (CTC), the concerned IEC and CA had direct access to his/her medical records for verification of clinical study procedures. An authorization from the hospital for access to medical records by the Monitor was available, as required by local legislation.

The patient had the right to request access to his/her personal data for rectification of any data that was not correct and/or complete.

The Investigator filed a Patient Identification List, which included sufficient information to link records, i.e. the eCRF and clinical records. This list will be preserved for possible future inspections/audits but has not been made available to the Sponsor except for monitoring or auditing purposes.

Background therapy:

Patients included in the study had to be on stable anti-Parkinson treatment for at least 30 days prior to inclusion and during the study. Treatment with Selegiline was not allowed. Concomitant treatment with pro-cognitive treatments such as Ach esterase inhibitors and Memantine were allowed.

Evidence for comparator:

N/A (placebo)

Actual start date of recruitment	20 September 2017
Long term follow-up planned	No
Independent data monitoring committee (IDMC) involvement?	No

Notes:

Population of trial subjects

Subjects enrolled per country

Country: Number of subjects enrolled	Sweden: 31
Country: Number of subjects enrolled	Finland: 1
Worldwide total number of subjects	32
EEA total number of subjects	32

Notes:

Subjects enrolled per age group	
In utero	0
Preterm newborn - gestational age < 37 wk	0
Newborns (0-27 days)	0
Infants and toddlers (28 days-23 months)	0
Children (2-11 years)	0
Adolescents (12-17 years)	0
Adults (18-64 years)	1
From 65 to 84 years	31
85 years and over	0

Subject disposition

Recruitment

Recruitment details:

Patients were recruited from the out-patient population at the study sites. Potentially eligible patients interested in taking part of the study could also be referred from other clinics.

Pre-assignment

Screening details:

Patients were screened (Visit 1; Screening Visit) for eligibility according to study-specific inclusion/exclusion criteria within 7-21 days before start of Investigational Medicinal Product administration.

Period 1

Period 1 title	Overall trial (overall period)
Is this the baseline period?	Yes
Allocation method	Randomised - controlled
Blinding used	Double blind
Roles blinded	Subject, Investigator, Monitor

Blinding implementation details:

This was a double-blind study and the allocation of treatments was not disclosed until clean file had been declared and the database had been locked. Capsules of IRL752 and placebo were of identical appearance.

Arms

Are arms mutually exclusive?	Yes
Arm title	IRL752

Arm description:

25 subjects were treated with IRL752 (50 mg hard HPMC capsules).

Arm type	Experimental
Investigational medicinal product name	IRL752 50mg
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Capsule, hard
Routes of administration	Oral use

Dosage and administration details:

IRL752 capsules, 50 mg: White hard hydroxypropylmethyl cellulose (HPMC) capsule for oral administration conic snap size 3.

The starting dose of IMP was 100 mg TID. Dose adjustments could be made during the first 14 days, at the discretion of the treating physician, according to the following:

- Visit 3 (Day 4): the dose could be increased to 150 mg TID, maintained at 100 mg TID, or reduced to 50 mg TID.
- Visit 4 (Day 8): the dose could be increased up to 200 mg TID, maintained or reduced to any previous dose level.
- Visit 5 (Day 11): the dose could be increased up to 250 mg TID, maintained or reduced to any previous dose level.

The minimum dose was 50 mg (1 capsule) TID and the maximum dose was 250 mg (5 capsules) TID.

The fixed IRL752 dose level for the remaining 14 days of treatment was determined on Day 14 (Visit 6) for each patient (50-250 mg TID).

Arm title	Placebo
------------------	---------

Arm description:

7 subjects were treated with placebo (hard HPMC capsules identical in appearance to IRL752 capsules).

Arm type	Placebo
----------	---------

Investigational medicinal product name	Placebo
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Capsule, hard
Routes of administration	Oral use

Dosage and administration details:

White hard HPMC capsule for oral administration coni snap size 3 with a matching total weight as for the IRL752 50 mg capsules.

The starting dose of IMP was 100 mg TID. Dose adjustments could be made during the first 14 days, at the discretion of the treating physician, according to the following:

- Visit 3 (Day 4): the dose could be increased to 150 mg TID, maintained at 100 mg TID, or reduced to 50 mg TID.

- Visit 4 (Day 8): the dose could be increased up to 200 mg TID, maintained or reduced to any previous dose level.

- Visit 5 (Day 11): the dose could be increased up to 250 mg TID, maintained or reduced to any previous dose level.

The minimum dose was 50 mg (1 capsule) TID and the maximum dose was 250 mg (5 capsules) TID.

The fixed IRL752 dose level for the remaining 14 days of treatment was determined on Day 14 (Visit 6) for each patient (50-250 mg TID).

Number of subjects in period 1	IRL752	Placebo
Started	25	7
Completed	23	6
Not completed	2	1
Adverse event, serious fatal	1	1
Consent withdrawn by subject	1	-

Baseline characteristics

Reporting groups

Reporting group title	IRL752
Reporting group description: 25 subjects were treated with IRL752 (50 mg hard HPMC capsules).	
Reporting group title	Placebo
Reporting group description: 7 subjects were treated with placebo (hard HPMC capsules identical in appearance to IRL752 capsules).	

Reporting group values	IRL752	Placebo	Total
Number of subjects	25	7	32
Age categorical Units: Subjects			
In utero	0	0	0
Preterm newborn infants (gestational age < 37 wks)	0	0	0
Newborns (0-27 days)	0	0	0
Infants and toddlers (28 days-23 months)	0	0	0
Children (2-11 years)	0	0	0
Adolescents (12-17 years)	0	0	0

White	25	7	32

End points

End points reporting groups

Reporting group title	IRL752
Reporting group description: 25 subjects were treated with IRL752 (50 mg hard HPMC capsules).	
Reporting group title	Placebo
Reporting group description: 7 subjects were treated with placebo (hard HPMC capsules identical in appearance to IRL752 capsules).	

Primary: Adverse Events

End point title	Adverse Events ^[1]
End point description: Adverse Events were spontaneously reported by the patients, observed or elicited based on non-leading questions by the Investigator or medical personnel.	
End point type	Primary
End point timeframe: From signing the ICF (V1; Screening) until the follow-up assessment (V9; Follow-up). AEs occurring after first administration of IMP (TEAEs) are presented below.	

Notes:

[1] - No statistical analyses have been specified for this primary end point. It is expected there is at least one statistical analysis for each primary end point.

Justification: Descriptive statistics.

End point values	IRL752	Placebo		
Subject group type	Reporting group	Reporting group		
Number of subjects analysed	25 ^[2]	7		
Units: Number of AEs				
Titration	32	1		
Steady state	24	3		

Notes:

[2] - Titration: N=25

Steady state: N=23

Statistical analyses

No statistical analyses for this end point

Primary: Physical examination

End point title	Physical examination ^[3]
End point description: Physical examination findings were categorized as Normal, Abnormal not clinically significant (NCS), and Abnormal clinically significant (CS). One abnormal finding (pneumonia) assessed as clinically significant but not related to study treatment was reported for patient #1022 on Visit 8 (Day 29). The event was reported as an AE. No other clinically significant findings were reported.	
End point type	Primary
End point timeframe: From Visit 1 (Screening) to Visit 9 (Follow-up).	

Notes:

[3] - No statistical analyses have been specified for this primary end point. It is expected there is at least one statistical analysis for each primary end point.

Justification: Descriptive statistics.

End point values	IRL752	Placebo		
Subject group type	Reporting group	Reporting group		
Number of subjects analysed	25	7		
Units: No of clinical significant (CS) values				
Abdomen (liver and spleen) - Abnormal CS	0	0		
Cardiovascular - Abnormal CS	0	0		
Ears - Abnormal CS	0	0		
Extremities - Abnormal CS	0	0		
Eyes - Abnormal CS	0	0		
Head - Abnormal CS	0	0		
Lungs - Abnormal CS	1	0		
Lymph nodes - Abnormal CS	0	0		
Neurological - Abnormal CS	0	0		
Nose - Abnormal CS	0	0		
Skin - Abnormal CS	0	0		
Throat - Abnormal CS	0	0		
Thyroid - Abnormal CS	0	0		

Statistical analyses

No statistical analyses for this end point

Primary: ECG

End point title	ECG ^[4]
-----------------	--------------------

End point description:

Single 12-lead ECGs were recorded in supine position after 5 min of rest. The parameters PQ, QRS, QT, and QTcF intervals were recorded.

There were no clinically relevant mean changes over time with regards to any of the ECG parameters evaluated and no individual abnormal values assessed as clinically significant.

End point type	Primary
----------------	---------

End point timeframe:

From Visit 1 (Screening) to Visit 8 (Follow-up).

Notes:

[4] - No statistical analyses have been specified for this primary end point. It is expected there is at least one statistical analysis for each primary end point.

Justification: Descriptive statistics.

End point values	IRL752	Placebo		
Subject group type	Reporting group	Reporting group		
Number of subjects analysed	25	7		
Units: No of clinically significant (CS) values				
Visit 1, Screening - Abnormal CS	0	0		

Visit 6, Day 14 - Abnormal CS	0	0		
Visit 7, Day 28 - Abnormal CS	0	0		
Visit 9, Follow-up - Abnormal CS	0	0		

Statistical analyses

No statistical analyses for this end point

Primary: Vital signs - Systolic blood pressure

End point title	Vital signs - Systolic blood pressure ^[5]
-----------------	--

End point description:

Systolic/diastolic blood pressure and pulse were measured in the supine position after 5 min of rest.

There were no clinically relevant mean changes over time with regards to any of the vital signs parameters evaluated and no individual abnormal values assessed as clinically significant.

End point type	Primary
----------------	---------

End point timeframe:

From Visit 1 (Screening) to Visit 8 (Follow-up).

Notes:

[5] - No statistical analyses have been specified for this primary end point. It is expected there is at least one statistical analysis for each primary end point.

Justification: Descriptive statistics.

End point values	IRL752	Placebo

Secondary: Neuropsychiatric Inventory-12 (NPI-12)

End point title	Neuropsychiatric Inventory-12 (NPI-12)
-----------------	--

End point description:

The objective was to evaluate the effects of IRL752 on neuropsychiatric symptoms assessed with Neuropsychiatric Inventory-12 (NPI-12), as compared to placebo.

The NPI-12 is a clinical instrument for assessing behavioural and psychological symptoms in dementia in 12 domains [13]. It is based on an interview with the primary caregiver. Each NPI domain is scored by the caregiver based on a standardized interview administered by the clinician. Each domain is scored for frequency, severity and associated caregiver distress. A higher score represents a higher severity or caregiver distress.

Data based on FAS population.

Secondary: Clinician's Interview-Based Impression of Change Plus caregiver input (CIBIC-Plus)

End point title	Clinician's Interview-Based Impression of Change Plus caregiver input (CIBIC-Plus)
-----------------	--

End point description:

The objective was to evaluate the effects of IRL752 on global function assessed with Clinician's Interview-Based Impression of Change Plus caregiver input (CIBIC-Plus), as compared to placebo.

The CIBIC-Plus is a validated clinical instrument used to measure change in global function through an interview with patients and their caregivers. Patients are assessed on a 7-point scale, "1=Very much improved" to "7=Marked worsening", based on information from four major categories: General, Mental/Cognitive State, Behaviour, and ADLs.

Data based on FAS population.

End point type	Secondary

Secondary: Exposure of IRL752

End point title	Exposure of IRL752 ^[45]
-----------------	------------------------------------

End point description:

The objective was to examine the exposure of IRL752 in patients with PDD.

Venous blood samples (approximately 5 mL) for the determination of concentrations of IRL752 in plasma were collected at specified time-points.

End point type	Secondary
----------------	-----------

End point timeframe:

From baseline to end of treatment.

Notes:

[45] - The end point is not reporting statistics for all the arms in the baseline period. It is expected all the baseline period arms will be reported on when providing values for an end point on the baseline period.

Justification: Exposure is not applicable for the placebo group.
