

Clinical trial results:

Targeted drug intervention to inhibit cancer progression in men on active surveillance for prostate cancer. Therapeutics in Active Prostate cancer Surveillance (TAPS01)

Summary

EudraCT number	2017-001700-29
Trial protocol	GB
Global end of trial date	25 July 2019

Results information

Result version number	v1 (current)
This version publication date	31 July 2020
First version publication date	31 July 2020

Paediatric regulatory details

Is trial part of an agreed paediatric investigation plan (PIP)	No
Does article 45 of REGULATION (EC) No 1901/2006 apply to this trial?	No
Does article 46 of REGULATION (EC) No 1901/2006 apply to this trial?	No

Notes:

Results analysis stage

Analysis stage	Final
Date of interim/final analysis	26 March 2020
Is this the analysis of the primary completion data?	Yes
Primary completion date	25 July 2019
Global end of trial reached?	Yes
Global end of trial date	25 July 2019
Was the trial ended prematurely?	No

Notes:

General information about the trial

Main objective of the trial:

The primary objective of this study is to test if short-term use of apalutamide can reduce image defined tumour volumes in men with prostate cancer and a detectable lesion on multi-parametric MRI (mpMRI) who are being managed by Active Surveillance (AS).

Protection of trial subjects:

Drug compliance monitoring throughout treatment (self-administered therapy).

Permitted dose reductions and omissions based on presence of drug-related toxicities.

safety review every 15 days throughout treatment, using CTCAE v4.03.

Laboratory investigations to detect adverse blood results at baseline, every 30 days through treatment, and at follow up.

Trial Steering Committee safety review of trial subjects.

Quality of life assessments at baseline, every 30 days through treatment, and at follow up.

Background therapy:

N/A

Evidence for comparator:

N/A

Actual start date of recruitment	05 June 2018
Long term follow-up planned	No
Independent data monitoring committee (IDMC) involvement?	No

Notes:

Population of trial subjects

Subjects enrolled per country

Country: Number of subjects enrolled	United Kingdom: 11
Worldwide total number of subjects	11
EEA total number of subjects	11

Notes:

Subjects enrolled per age group

In utero	0
Preterm newborn - gestational age < 37 wk	0
Newborns (0-27 days)	0
Infants and toddlers (28 days-23 months)	0
Children (2-11 years)	0

Adolescents (12-17 years)	0
Adults (18-64 years)	2
From 65 to 84 years	9
85 years and over	0

Subject disposition

Recruitment

Recruitment details:

First patient first visit: 15 Jun 2018; Last Patient last visit: 25 Jul 2019. 11 patients were enrolled in total in the UK (England), of which 9 were evaluable (target: at least 8 evaluable patients and up to 10) and 2 were non-evaluable. Evaluability was as per defined in the protocol. 1 patient did not complete treatment and 1 did not start.

Pre-assignment

Screening details:

A total of 31 patients were screened according to the eligibility criteria defined in the protocol, of which 11 were enrolled into the trial. Out of the 20 patients not enrolled, 4 patients were deemed non-eligible and 16 did not enrol into the study due to a variety of reasons (personal, health, IMP concerns, no reason given and lost contact)

Period 1

Period 1 title	Overall Period (overall period)
Is this the baseline period?	Yes
Allocation method	Not applicable
Blinding used	Not blinded

Arms

Arm title	Apalutamide
Arm description: -	
Arm type	Experimental
Investigational medicinal product name	Apalutamide
Investigational medicinal product code	ARN509
Other name	Erleada
Pharmaceutical forms	Tablet
Routes of administration	Oral use

Dosage and administration details:

Patients were administered 240 mg (four 60 mg tablets) of apalutamide orally, once daily, for 90 consecutive days. Tablets to be swallowed whole with or without food.

Protocol allowed for one dose reduction per subject to 120 mg daily. The dose was not permitted to be re-escalated back to 240 mg daily.

A temporary break in apalutamide was acceptable in the event of a non-drug related AE. Patients were allowed to re-start apalutamide, at the previous dose, if the reason for the break had resolved within 30 days and patients did not meet the withdrawal criteria, as per defined in the study protocol. Dose modifications were also allowed for patients presenting drug-related adverse reactions, as per defined in the trial protocol (including but not limited to rash and pruritus with no rash).

Number of subjects in period 1 ^[1]	Apalutamide
Started	10
Completed	9
Not completed	1
Adverse event, non-fatal	1

Notes:

[1] - The number of subjects reported to be in the baseline period are not the same as the worldwide number enrolled in the trial. It is expected that these numbers will be the same.

Justification: The baseline period accounts for extra participants that were consented but did not meet the eligibility criteria to be formally enrolled in the trial.

End points

End points reporting groups

Reporting group title	Apalutamide
Reporting group description: -	

Primary: Percentage change in tumour size measured by mpMRI (tumour volume - cm³)

End point title	Percentage change in tumour size measured by mpMRI (tumour volume - cm ³) ^[1]
-----------------	--

End point description:

Percentage change in tumour size measured by mpMRI (tumour volume³) or absence of a lesion between baseline and day 90. The percentage of patients achieving tumour downsizing with their 95% confidence interval was estimated using the primary lesion (i.e. the largest lesion if a patient had more than one lesion).

End point type	Primary
----------------	---------

End point timeframe:

Tumour volume (cm³) change from baseline at day 90.

Notes:

[1] - No statistical analyses have been specified for this primary end point. It is expected there is at least one statistical analysis for each primary end point.

Justification: It's a single arm study.

End point values	Apalutamide			
Subject group type	Reporting group			
Number of subjects analysed	9			
Units: tumour volume (cm ³)				
arithmetic mean (standard deviation)				
Percentage change	51.86 (± 17.1)			

Statistical analyses

No statistical analyses for this end point

Other pre-specified: Change in total tumour volume

End point title	Change in total tumour volume
-----------------	-------------------------------

End point description:

Percentage change in total tumour size measured by mpMRI (tumour volume³) or absence of a lesion between baseline and day 90.

End point type	Other pre-specified
----------------	---------------------

End point timeframe:

Percentage change from baseline at day 90

End point values	Apalutamide			
Subject group type	Reporting group			
Number of subjects analysed	9			
Units: total tumour volume - cm ³				
arithmetic mean (standard deviation)	52.4 (± 17.4)			

Statistical analyses

No statistical analyses for this end point

Other pre-specified: Change in gland volume

End point title	Change in gland volume
-----------------	------------------------

End point description:

End point type	Other pre-specified
----------------	---------------------

End point timeframe:

Gland volume (cm³) change from baseline at day 90

End point values	Apalutamide			
Subject group type	Reporting group			
Number of subjects analysed	9			
Units: Gland volume in cm ³				
arithmetic mean (standard deviation)	36.2 (± 8.7)			

Statistical analyses

No statistical analyses for this end point
