

## Clinical trial results:

### A Randomized, Double-Blind, Placebo-Controlled Phase 2 Study to Evaluate the Safety and Efficacy of Avacopan (CCX168) in Patients with C3 Glomerulopathy

#### Summary

EudraCT number	2017-001821-42
Trial protocol	GB BE DE NL ES DK FR IT IE
Global end of trial date	27 October 2021

#### Results information

Result version number	v1 (current)
This version publication date	15 July 2023
First version publication date	15 July 2023

#### Trial information

##### Trial identification

Sponsor protocol code	CL011_168
-----------------------	-----------

##### Additional study identifiers

ISRCTN number	-
ClinicalTrials.gov id (NCT number)	-
WHO universal trial number (UTN)	-
Other trial identifiers	IND Number: 132 321

Notes:

##### Sponsors

Sponsor organisation name	ChemoCentryx, Inc.
Sponsor organisation address	850 Maude Avenue, Mountain View, California, United States, 94043
Public contact	Clinical trial disclosure, ChemoCentryx, Inc., +1 650 210 2900, clinicaltrials@chemocentryx.com
Scientific contact	Clinical trial disclosure, ChemoCentryx, Inc., +1 650 210 2900, clinicaltrials@chemocentryx.com

Notes:

##### Paediatric regulatory details

Is trial part of an agreed paediatric investigation plan (PIP)	No
Does article 45 of REGULATION (EC) No 1901/2006 apply to this trial?	No
Does article 46 of REGULATION (EC) No 1901/2006 apply to this trial?	No

Notes:

## Results analysis stage

Analysis stage	Final
Date of interim/final analysis	14 December 2021
Is this the analysis of the primary completion data?	Yes
Primary completion date	03 March 2021
Global end of trial reached?	Yes
Global end of trial date	27 October 2021
Was the trial ended prematurely?	No

Notes:

## General information about the trial

Main objective of the trial:

The primary objective is to evaluate the efficacy of avacopan compared to placebo based on histologic changes in kidney biopsies taken before and during treatment.

Protection of trial subjects:

The study was conducted in accordance with the Declaration of Helsinki and with all applicable laws and regulations of the locale and country where the study was conducted, and in compliance with Good Clinical Practice Guidelines. Only subjects that met all the study inclusion and none of the exclusion criteria were entered in the study. The rationale of the study, procedural details, and investigational goals were explained to each subject, along with potential risks and benefits. Each subject was assured of his/her right to withdraw from the study at any time.

Background therapy: -

Evidence for comparator: -

Actual start date of recruitment	29 September 2017
Long term follow-up planned	No
Independent data monitoring committee (IDMC) involvement?	Yes

Notes:

## Population of trial subjects

### Subjects enrolled per country

Country: Number of subjects enrolled	Netherlands: 6
Country: Number of subjects enrolled	Spain: 6
Country: Number of subjects enrolled	United Kingdom: 4
Country: Number of subjects enrolled	Belgium: 3
Country: Number of subjects enrolled	Denmark: 2
Country: Number of subjects enrolled	Germany: 3
Country: Number of subjects enrolled	Ireland: 6
Country: Number of subjects enrolled	Italy: 1
Country: Number of subjects enrolled	Canada: 5
Country: Number of subjects enrolled	United States: 21
Worldwide total number of subjects	57
EEA total number of subjects	27

Notes:

### Subjects enrolled per age group

In utero	0
----------	---

Preterm newborn - gestational age < 37 wk	0
Newborns (0-27 days)	0
Infants and toddlers (28 days-23 months)	0
Children (2-11 years)	0
Adolescents (12-17 years)	2
Adults (18-64 years)	51
From 65 to 84 years	4
85 years and over	0

## Subject disposition

### Recruitment

Recruitment details: -

### Pre-assignment

Screening details:

A total of 104 subjects screened.

### Period 1

Period 1 title	Blinded treatment period (overall period)
Is this the baseline period?	Yes
Allocation method	Randomised - controlled
Blinding used	Double blind
Roles blinded	Subject, Investigator, Carer, Assessor

### Arms

Are arms mutually exclusive?	Yes
<b>Arm title</b>	Placebo Group

Arm description:

Avacopan matching placebo

Subjects with Elevated C5b-9 (> 244 ng/mL) and combined C5b-9 (elevated [ $> 244$  ng/mL] and non-elevated C5b-9) in the ITT Population.

ITT Population: included all randomized subjects who received at least one dose of study medication; subjects with a histologic activity score of 0 at baseline or who were ongoing and had not completed the Week 26 visit were not included in the ITT population.

Arm type	Placebo
Investigational medicinal product name	Avacopan Matching Placebo
Investigational medicinal product code	
Other name	Placebo
Pharmaceutical forms	Capsule
Routes of administration	Oral use

Dosage and administration details:

Matching placebo capsules x 3 administered twice daily during the 26-week blinded treatment period

<b>Arm title</b>	Avacopan Group
------------------	----------------

Arm description:

Avacopan (formerly CCX168)

Subjects with Elevated C5b-9 (> 244 ng/mL) and combined C5b-9 (elevated [ $> 244$  ng/mL] and non-elevated C5b-9) in the ITT Population.

ITT Population: included all randomized subjects who received at least one dose of study medication; subjects with a histologic activity score of 0 at baseline or who were ongoing and had not completed the Week 26 visit were not included in the ITT population

Arm type	Experimental
Investigational medicinal product name	Avacopan
Investigational medicinal product code	
Other name	CCX168
Pharmaceutical forms	Capsule
Routes of administration	Oral use

Dosage and administration details:

Avacopan (formerly CCX168) 10 mg capsules x 3 administered twice daily during the blinded 26-week blinded treatment period

<b>Number of subjects in period 1</b>	Placebo Group	Avacopan Group
Started	29	28
Completed	25	22
Not completed	4	6
Consent withdrawn by subject	-	1
Adverse event, non-fatal	1	2
Other	2	1
Investigator Decision	1	-
Sponsor decision	-	1
Lost to follow-up	-	1

## Baseline characteristics

### Reporting groups

Reporting group title	Placebo Group
Reporting group description:	
Avacopan matching placebo	
Subjects with Elevated C5b-9 (> 244 ng/mL) and combined C5b-9 (elevated [> 244 ng/mL] and non-elevated C5b-9) in the ITT Population.	
ITT Population: included all randomized subjects who received at least one dose of study medication; subjects with a histologic activity score of 0 at baseline or who were ongoing and had not completed the Week 26 visit were not included in the ITT population.	
Reporting group title	Avacopan Group
Reporting group description:	
Avacopan (formerly CCX168)	
Subjects with Elevated C5b-9 (> 244 ng/mL) and combined C5b-9 (elevated [> 244 ng/mL] and non-elevated C5b-9) in the ITT Population.	
ITT Population: included all randomized subjects who received at least one dose of study medication; subjects with a histologic activity score of 0 at baseline or who were ongoing and had not completed the Week 26 visit were not included in the ITT population

## Secondary: Change From Baseline Over 26 Weeks in EQ-5D-5L Health Scale VAS and Index Score - Subjects With Elevated C5b-9

End point title	Change From Baseline Over 26 Weeks in EQ-5D-5L Health Scale VAS and Index Score - Subjects With Elevated C5b-9
-----------------	--

End point description:

Change from baseline over 26 weeks in EQ-5D-5L Health Scale VAS and Index Score - Subjects with Elevated C5b-9 (> 244 ng/mL) in the Intent-to-Treat Population.

EQ-5D-5L: EuroQuality of Life-5 Domains-5 Levels.

The EQ-5D-5L consists of 2 pages: the EQ-5D descriptive system and the EQ visual analogue scale (EQ VAS). The descriptive system comprises five dimensions: mobility, self-care, usual activities, pain/discomfort and anxiety/depression. Each dimension has 5 levels: no problems, slight problems, moderate problems, severe problems and extreme problems. The answers given can be converted into an Index Score ranging from 0 for death to 1 for perfect health. The EQ-5D questionnaire also includes a Visual Analog Scale (VAS), by which respondents can report their perceived health status with a grade ranging from 0 (the worst imaginable health) to 100 (the best imaginable health).

### Secondary: Change From Baseline Over 26 Weeks in SF-36 v2 - Subjects With Elevated C5b-9

End point title	Change From Baseline Over 26 Weeks in SF-36 v2 - Subjects With Elevated C5b-9
-----------------	---

End point description:

Change from baseline over 26 weeks in SF-36 v2 - Subjects with Elevated C5b-9 ( $> 244$  ng/mL) in the Intent-to-Treat Population.

SF-36v2: Medical Outcomes Survey Short Form-36 version 2.

SF-36v2 measures each of the following eight health domains: Physical Functioning, Role-Physical, Bodily Pain, General Health, Vitality, Social Functioning, Role-Emotional, and Mental Health. Scores on each item are summed and averaged. The SF-36v2 component domain scores range from 0 (worst health) to 100 (best health)

## Adverse events

### Adverse events information

Timeframe for reporting adverse events:

From day 1 throughout the study period (day 182/week 26)

Adverse event reporting additional description:

An adverse event is considered treatment-emergent if the start date/time of the event is on or after the date/ time of first study drug treatment up to the final observation in the double-blind treatment period (week 26).

Assessment type	Systematic
-----------------	------------

### Dictionary used

Dictionary name	MedDRA
-----------------	--------

Dictionary version	20.1
--------------------	------

### Reporting groups

Reporting group title	Placebo Group
-----------------------	---------------

Reporting group description:

Avacopan-matching placebo capsules x 3 administered twice daily during the 26 week blinded treatment period

Avacopan-matching placebo: Orally administered

The safety population included all subjects who were randomized and had received at least one dose of study drug.

Reporting group title	Avacopan Group
-----------------------	----------------

Reporting group description:

Avacopan (formerly CCX168) 10 mg capsules x 3 administered twice daily during the blinded 26 week blinded treatment period

Avacopan: Orally administered

The safety population included all subjects who were randomized and had received at least one dose of study drug.

## More information

### Substantial protocol amendments (globally)

Were there any global substantial amendments to the protocol? Yes

Date	Amendment
13 September 2017	<p>Protocol amendment 1</p> <ul style="list-style-type: none"><li>• added 12-lead ECG to screening and safety assessments</li><li>• added urinary albumin:creatinine ratio (UACR) and protein: creatinine ratio (UPCR) to screening evaluations</li><li>• clarified that the week 52 biopsy in adolescent subjects was optional and was not a protocol deviation if not collected</li><li>• added active uncontrolled infection to the exclusion criteria</li><li>• clarified that pharmacodynamic markers were exploratory endpoints</li><li>• clarified albuminuria measurement</li><li>• clarified that it was not necessary to use CTCAE grading for clinical events. CTCAE criteria could be used for severity assessment of lab values. If there was a clinical adverse event related to a lab abnormality, the adverse event was to be reported as the clinical event, where possible.</li><li>• added a new section to accommodate reports of overdose, misuse and abuse of the investigational medicinal product. All associated adverse events were to be reported as adverse events or serious adverse events using the adverse events electronic case report form (eCRF) and/or the serious adverse event report form.</li><li>• added instruction that subjects who terminated early from the trial would have serious adverse events recorded at follow-up visits or at least 30 days after last investigational product administration.</li><li>• added instruction that serious adverse event information should be entered as soon as possible when EDC access is returned.</li></ul>

16 April 2018	<p>Protocol Amendment 2</p> <ul style="list-style-type: none"> <li>• added a secondary population with diagnosed C3G and lower levels of circulating C5b-9 levels which was previously excluded</li> <li>• expanded screening from 4 weeks to 6 weeks</li> <li>• clarified that adolescent subjects were enrolled only in regulatory territories where approval was received, and that the dose in adolescents depended on body weight and avacopan plasma exposure (AUC<sub>0-6hr</sub>) or avacopan trough concentrations</li> <li>• expanded the number of subjects enrolled in the study from 44 to 88</li> <li>• added to inclusion criteria that the Investigator would provide assurance that adolescent subjects were willing and able to ingest the size "0" tablet</li> <li>• clarified that CT-scan or chest X-ray was not mandatory, if evidence of tuberculosis was excluded by other methods described</li> <li>• increase the number of lesions to be included in the C3G Histologic Index for disease activity from 4 to 7</li> <li>• expanded description of the C3G Histologic Index for Activity scoring system using the glomerulopathy histologic score as described by Bombback et al (Bombback et al, 2018)</li> <li>• added text to the statistics methods to accommodate the new C5b-9 strata</li> <li>• added that missing data would be imputed with the last observation carried forward (LOCF). Multiple imputation using other statistical methods could also be performed.</li> <li>• added that the day 183 morning dose for adolescent subjects was to be taken in the clinic rather than at home</li> <li>• added that subjects were to be reminded through a telephone call that the week 52 dose should not be taken.</li> <li>• added that the final 4 PK samples (Weeks 52, 54, 57, 60) were for terminal PK evaluation</li> <li>• added exploratory endpoints around PK parameters and PK/PD relationship</li> <li>• added criteria for potential for early termination of the stratum with C5b 9 levels 244 ng/m</li> <li>• added that PK parameters would be calculated based on plasma concentration for samples collected on both day 1 and day 183 (week 26)</li> </ul>
02 August 2018	<p>Protocol Amendment 3</p> <ul style="list-style-type: none"> <li>• added visits at week 23, 35, 41, and 48 per DMC recommendation to increase the frequency of liver testing; data on concomitant medications and Adverse events were to be collected for the added visits</li> <li>• added serum chemistries at week 2, 23, 35, 41, and 48 per DMC recommendation to increase the frequency of liver testing</li> <li>• added that any changes in concomitant medication use were to be recorded per DMC recommendation</li> <li>• added new safety information from an ongoing clinical trial in a different indication to coincide with updated Reference Safety Information in the Investigator's Brochure</li> <li>• clarified that a follow-up renal biopsy was to be performed within 2 weeks before the week 26 visit and was to be completed before open-label medication was started</li> <li>• added scale to be used for crescent formation and fibrinoid necrosis involvement</li> <li>• clarified hepatic enzyme criteria under which dosing with investigational product would be suspended for that subject during investigation into the causality of abnormal liver tests and criteria for resumption of investigational product.</li> </ul>

20 March 2019	<p>Protocol Amendment 4</p> <ul style="list-style-type: none"> <li>clarified throughout that the investigational product was blinded</li> <li>increased the duration of the study from 26 to 32 months to accommodate previous increase in sample size and slower than expected enrollment</li> <li>updated the earliest time point for primary efficacy analysis</li> <li>increase the frequency of hematology testing per DMC recommendation</li> <li>clarified time allowed to differentiate between common fluctuations of renal function and true deterioration of renal function to prevent unnecessary discontinuation</li> <li>clarified that investigational product dosing was paused during investigation of causality of abnormal liver tests, abnormal hematology, and serum chemistry tests and investigational product was to be discontinued, if applicable</li> <li>updated clinical evaluation to include current clinical status, clarify patient safety information and to include the clinical safety information</li> </ul>
---------------	---

Notes:

## Interruptions (globally)

Were there any global interruptions to the trial? Yes

Date	Interruption	Restart date
02 April 2020	Paused screening due to COVID-19	25 June 2020
02 October 2020	Paused screening to any new participants with analysis of efficacy data and sent confirmation to sites on 12-Feb-2021 following the results of the analysis, no further subjects would be enrolled.	-

Notes:

## Limitations and caveats

None reported
