Clinical trial results:
Randomized, Open Label, Multicenter Study Assessing The Clinical Benefit Of Isatuximab Combined With Carfilzomib (Kyprolis®) And Dexamethasone Versus Carfilzomib With Dexamethasone In Patients With Relapse And/Or Refractory Multiple Myeloma Previously Treated With 1 to 3 Prior Lines

Summary

Paediatric regulatory details

Is trial part of an agreed paediatric investigation plan (PIP)	No
Does article 45 of REGULATION (EC) No 1901/2006 apply to this trial?	No
Does article 46 of REGULATION (EC) No 1901/2006 apply to this trial?	No

Notes:

Results analysis stage

Analysis stage	Interim
Date of interim/final analysis	14 January 2022
Is this the analysis of the primary completion data?	Yes
Primary completion date	14 January 2022
Global end of trial reached?	No

Notes:

General information about the trial

Main objective of the trial:

To demonstrate the benefit of isatuximab in combination with carfilzomib and dexamethasone in the prolongation of progression free survival (PFS) using International Myeloma Working Group (IMWG) as compared to carfilzomib and dexamethasone in subjects with relapsed and/or refractory multiple myeloma (MM) previously treated with 1 to 3 lines of therapy.

Protection of trial subjects:

Subjects were fully informed of all pertinent aspects of the clinical trial, as well as the possibility to discontinue at any time in language and terms appropriate for the subject and considering the local culture. During the course of the trial, subjects were provided with individual subject cards indicating the nature of the trial the subject is participating, contact details and any information needed in the event of a medical emergency. Collected personal data and human biological samples were processed in compliance with the Sanofi-Aventis Group Personal Data Protection Charter ensuring that the Group abides by the laws governing personal data protection in force in all countries in which it operates.

Background therapy: -

Evidence for comparator: -

Actual start date of recruitment	25 October 2017
Long term follow-up planned	No
Independent data monitoring committee (IDMC) involvement?	Yes

Notes:

Population of trial subjects

Subjects enrolled per country

Country: Number of subjects enrolled	Australia: 37
Country: Number of subjects enrolled	Brazil: 33
Country: Number of subjects enrolled	Canada: 8

Country: Number of subjects enrolled	Italy: 6
Country: Number of subjects enrolled	Japan: 19
Country: Number of subjects enrolled	Korea, Republic of: 27
Country: Number of subjects enrolled	New Zealand: 6
Country: Number of subjects enrolled	Russian Federation: 10
Country: Number of subjects enrolled	Spain: 24
Country: Number of subjects enrolled	Turkey: 14
Country: Number of subjects enrolled	United Kingdom: 9
Country: Number of subjects enrolled	United States: 3

Worldwide total number of subjects	302
EEA total number of subjects	136

Notes:

Subjects enrolled per age group	
In utero	0
Preterm newborn - gestational age < 37 wk	0
Newborns (0-27 days)	0
Infants and toddlers (28 days-23 months)	0
Children (2-11 years)	0
Adolescents (12-17 years)	0
Adults (18-64 years)	154
From 65 to 84 years	146
85 years and over	2

Subject disposition

Recruitment

Recruitment details:

Study conducted at 69 active centers in 16 countries. 341 subjects screened between 25 Oct 2017 & 21 Mar 2019, 39 subjects were screen failure - not met eligibility criteria. Randomisation - stratified by number of prior lines (1 vs >1) & revised international staging system (R-ISS) I/II vs III vs not classified. 302 subjects enrolled & randomised.

Pre-assignment

Screening details:

Study ongoing, data cut-off date for result analysis reported 07 Feb 2020: efficacy outcomes, 14 Jan 2022: CR, MRD, PFS2. PFS data reported at 07 Feb 2020 & 14 Jan 2022. Primary analysis of PFS refer to interim analysis planned to be conducted at 103 events (07Feb20) & final analysis of PFS planned to be conducted at 159 events (14Jan22).

Period 1

Period 1 title	Overall Study (overall period)
Is this the baseline period?	Yes
Allocation method	Randomised - controlled
Blinding used	Not blinded

Arms

Are arms mutually exclusive?	Yes
Arm title	Carfilzomib + Dexamethasone (Kd)

Arm description:

Subjects received carfilzomib 20 milligrams per meter square (mg/m^2), intravenous (IV) infusion on Days 1, and 2 in Cycle 1, and then escalated to 56 mg/m^2 on Days 8, 9, 15 and 16 of Cycle 1 on Days 1, 2, 8, 9, 15 and 16 of each subsequent 28-day treatment cycles plus dexamethasone 20 milligrams (mg), orally (PO) or IV on Days 1, 2, 8, 9, 15, 16, 22 and 23 of each 28-day treatment cycles until disease progression or unacceptable adverse event or subject’s decision to discontinue the study treatment or any other reason, whichever comes first (maximum exposure: 208 weeks).

Arm type	Experimental
Investigational medicinal product name	Carfilzomib
Investigational medicinal product code	
Other name	Kyprolis
Pharmaceutical forms	Solution for infusion
Routes of administration	Intravenous use

Dosage and administration details:

Carfilzomib 20 mg/m^2, was administered as an IV infusion on Days 1, and 2 in Cycle 1, and then escalated to 56 mg/m^2 on Days 8, 9, 15 and 16 of Cycle 1 and then on Days 1, 2, 8, 9, 15 and 16 of each subsequent 28-day treatment cycle along with dexamethasone 20 mg, PO or IV on Days 1, 2, 8, 9, 15, 16, 22 and 23 of each 28-day treatment cycle.

Investigational medicinal product name	Dexamethasone
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Injection, Tablet
Routes of administration	Intravenous use, Oral use

Dosage and administration details:

Dexamethasone 20 mg was administered PO or IV on Days 1, 2, 8, 9, 15, 16, 22 and 23 of each 28-day treatment cycle along with Carfilzomib.

Arm title	Isatuximab + Carfilzomib + Dexamethasone (IKd)

Arm description:

Subjects received isatuximab 10 mg/kg, IV infusion on Days 1, 8, 15 and 22 in Cycle 1, then on Day 1 and Day 15 of each 28-day treatment cycles plus carfilzomib 20 mg/m^2, IV on Days 1, and 2 in Cycle 1, and then escalated to 56 mg/m^2 on Days 8, 9, 15 and 16 of Cycle 1 and on Days 1, 2, 8, 9, 15 and 16 of each subsequent 28-day treatment cycles and dexamethasone 20 mg, PO or IV on Day 1, 2, 8, 9,

15, 16, 22 and 23 of each 28-day treatment cycles until disease progression or unacceptable adverse event or subject's decision to discontinue the study treatment or any other reason, whichever comes first (maximum exposure: 215 weeks).

Arm type	Experimental
Investigational medicinal product name	Carfilzomib
Investigational medicinal product code	
Other name	Kyprolis
Pharmaceutical forms	Solution for infusion
Routes of administration	Intravenous use

Dosage and administration details:

Carfilzomib 20 (mg/m^2, was administered as an IV infusion on Days 1, and 2 in Cycle 1, and then escalated to 56 mg/m^2 on Days 8, 9, 15 and 16 of Cycle 1 and then on Days 1, 2, 8, 9, 15 and 16 of each subsequent 28-day treatment cycle along in combination with carfilzomib and dexamethasone.

Investigational medicinal product name	Isatuximab
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Solution for infusion
Routes of administration	Intravenous use

Dosage and administration details:

Isatuximab 10 mg/kg, was administered as an IV infusion on Days 1, 8, 15 and 22 in Cycle 1, and then on Days 1 and 15 of each 28-day treatment cycle in combination with carfilzomib and dexamethasone.

Investigational medicinal product name	Dexamethasone
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Injection, Tablet
Routes of administration	Intravenous use, Oral use

Dosage and administration details:

Dexamethasone 20 mg was administered PO or IV on Days 1, 2, 8, 9, 15, 16, 22 and 23 of each 28-day treatment cycle along with carfilzomib and isatuximab.

Number of subjects in period 1	Carfilzomib + Dexamethasone (Kd)	Isatuximab + Carfilzomib + Dexamethasone (IKd)
Started	123	179
Treated	122	177
Completed	62	74
Not completed	61	105

Primary: Progression Free Survival (PFS) As Determined by Independent Response Committee (IRC): Primary Analysis

End point title	Progression Free Survival (PFS) As Determined by Independent Response Committee (IRC): Primary Analysis

End point description:

Time from randomisation to date of 1st documentation of progressive disease (PD)/date of death, whichever 1st. If PD & death not observed before cut-off date/date of initiation of further anti-myeloma treatment, PFS censored at date of last valid disease assessment not showing PD performed prior to initiation of further anti-myeloma treatment/cut-off date, whichever 1st. PD:any 1 of following: increase(inc) >=25% serum M-component from nadir; serum M component inc >=1 g/dL in 2 consecutive assessment, if starting M component >=5 g/dL; and/or inc >=25% in urine M-component from nadir and/or development of new bone lesion/soft tissue extramedullary disease/inc >=50% from nadir in sum of perpendicular diameter of existing soft tissue extramedullary disease lesion if >1 lesion/ >=50% increase in longest diameter of previous soft tissue extramedullary disease lesion >1 cm in short axis. ITT population. Kaplan-Meier method.99999=value could not be calculated as <50% subjects had PFS events.

End point type	Primary

End point timeframe:

From randomisation until the primary analysis data cut-off date of 7 Feb 2020 (median duration of follow-up was 20.73 months)

End point values	Carfilzomib + Dexamethasone (Kd)	Isatuximab + Carfilzomib + Dexamethasone (IKd)		
Subject group type	Reporting group	Reporting group		
Number of subjects analysed	123	179		
Units: months				
median (confidence interval 95%)	19.15 (15.770 to 99999)	99999 (99999 to 99999)		

Statistical analyses

Statistical analysis title	PFS per IRC: Primary Analysis

Statistical analysis description:

Statistical analysis for comparison of PFS between the Kd and IKd arms based on primary analysis.

Comparison groups	Carfilzomib + Dexamethasone (Kd) v Isatuximab + Carfilzomib + Dexamethasone (IKd)
Number of subjects included in analysis	302
Analysis specification	Pre-specified
Analysis type	superiority[1]
P-value	= 0.0007 [2]
Method	Stratified Log-Rank test
Parameter estimate	Hazard ratio (HR)
Point estimate	0.531
Confidence interval	
level	Other: 99 %
sides	2-sided
lower limit	0.318
upper limit	0.889

Notes:

[1] - For PFS, the nominal significance levels at primary analysis was determined using alpha-spending function in order to control overall 1-sided type 1 error at 2.5%. The 1-sided nominal significance level to declare overwhelming efficacy at primary analysis (103 PFS events) was 0.005. Because the median PFS was not reached at the primary analysis, it was described at the final analysis.

[2] - One-sided p-value based on Stratified log-rank test. Threshold for significance=0.005. Stratified on number of prior lines of therapy(1 vs >1) & revised international staging system (I/II vs III vs not classified) per interactive response technology.

Primary: Progression Free Survival as Determined by Independent Response Committee: Final Analysis

End point title	Progression Free Survival as Determined by Independent Response Committee: Final Analysis

End point description:

PFS: time (in months) from randomisation to date of first documentation of PD or date of death from any cause, whichever comes first. If PD and death was not observed before analysis cut-off date or date of initiation of further anti-myeloma treatment, PFS was censored at date of last valid disease assessment or analysis cut-off date, whichever comes first. PD as per IMWG criteria: any 1 of following: Inc of >=25% in Serum M-component from nadir; serum M component increase >=1 g/dL in 2 consecutive assessment, if starting M component was >=5 g/dL; and/or inc of >=25% in Urine M-component from nadir and/or development of new bone lesion/soft tissue extramedullary disease/inc >=50% from nadir in sum of perpendicular diameters of existing soft tissue extramedullary disease lesion if >1 lesion/ >=50% inc in longest diameter of previous soft tissue extramedullary disease lesion >1 cm in short axis. Analysis was performed on ITT population and estimated by Kaplan-Meier method.

End point type	Primary

End point timeframe:

From randomisation until the final analysis data cut-off date of 14 January 2022 (the median duration of follow-up was 43.96 months)

End point title	Percentage of Subjects With Very Good Partial Response (VGPR) or Better as Determined by Independent Response Committee: Primary Analysis

End point description:

VGPR or better: defined as subjects with sCR, CR and VGPR as the best overall response (defined as best response from start of treatment until disease progression, death, initiation of further anti-myeloma treatment or cut-off date whichever occurs first) as per IRC. As per IMWG response criteria: sCR: negative immunofixation on serum and urine, disappearance of any soft tissue plasmacytomas, <5% plasma cells in BMAs plus normal free light chain (FLC) ratio (0.26-1.65), absence of clonal cells in bone marrow biopsy. CR: negative immunofixation on serum and urine, disappearance of any soft tissue plasmacytomas, <5% plasma cells in BMAs. VGPR: serum and urine M-protein detectable by immunofixation, not on electrophoresis/,>=90% reduction in serum M-protein plus urine M-protein level <100mg/24h/,>=90% decrease in SPD compared to baseline in soft tissue plasmacytoma. ITT population: subjects who gave their informed consent & for whom there was confirmed randomisation number by IRT.

Secondary: Percentage of Subjects With VGPR or Better With Minimal Residual Disease (MRD) Negativity: Final Analysis

End point title	Percentage of Subjects With VGPR or Better With Minimal Residual Disease (MRD) Negativity: Final Analysis

End point description:

Percentage of subjects with sCR, CR and VGPR for whom MRD assessed by sequencing was negative at any time after first dose of study treatment. MRD was assessed centrally by next-generation sequencing in BM aspiration samples from subjects who achieve VGPR/better, to determine depth of response at molecular level. VGPR or better: percentage of subjects with sCR, CR and VGPR. sCR: negative immunofixation on serum and urine, disappearance of any soft tissue plasmacytomas, <5% plasma cells in bone marrow aspirates plus normal FLC ratio, absence of clonal cells in bone marrow biopsy. CR: negative immunofixation on serum & urine, disappearance of any soft tissue plasmacytomas, <5% plasma cells in bone marrow aspirates. VGPR: serum & urine M-protein detectable by immunofixation, not on electrophoresis/,>=90% reduction in serum M-protein plus urine M-protein level <100mg/24h/,>=90% decrease in SPD compared to baseline in soft tissue plasmacytoma. Analysis was performed on ITT population.

End point title	Health Related Quality of Life (HRQL): Change from Baseline in European Organization for Research and Treatment of Cancer Quality of Life Cancer Specific Questionnaire With 30 Items (EORTC QLQ-C30): Global Health Status Score at Specified Timepoints

End point description:

EORTC QLQ-C30 is a cancer-specific instrument that contains 30 items & provides multidimensional assessment of HRQL. EORTC QLQ-C30 includes global health status/quality of life (GHS/QOL), functional scales (physical, role, cognitive, emotional, social), symptom scales (fatigue, pain, nausea/vomiting), and 6 single items (dyspnea, appetite loss, insomnia, constipation, diarrhea, financial difficulties). Most questions from QLQ-C30 are 4-point scale (1/Not at All to 4/Very Much), except Items 29-30, which comprise GHS scale & are 7-point scale (1/Very Poor to 7/Excellent). GHS total score is calculated as ([{Q29+Q30}/2]-1)/6*100. Answers are converted into grading scale, with values between 0 (worse outcome) to100 (best outcome). High score represents a favorable outcome with best quality of life for subject. Results reported for primary analysis with data cut-off date 7-Feb-2020. Analysis was performed on ITT population. 'n' signifies subjects with available data for each category.

End point title	HRQL: Change from Baseline in European Organization for Research and Treatment of Cancer Quality of Life Cancer Specific Questionnaire With 20 Items (EORTC QLQ-MY20): Disease Symptoms Domain Score at Specified Timepoints: Primary Analysis

End point description:

EORTC QLQ-MY20 is a validated questionnaire to assess the overall quality of life in subjects with multiple myeloma. It is used in conjunction with the EORTC QLQ-C30 to assess symptoms and side effects due to treatment or the disease. Disease symptoms domain is one of the four domain scores. Disease symptoms domain consist of 6 questions and the score uses 4-point scale (1 'Not at All' to 4 'Very Much'). Disease Symptoms Domain Score is calculated as ([{Q31+Q32+Q33+Q34+Q35+Q36}/6]-1)/3*100. Scores are averaged, and transformed to 0-100 scale, where higher scores = more symptoms and lower HRQL. Analysis was performed on ITT population. Here, 'n' signifies subjects with available data for each specified category.

End point title	HRQL: Change From Baseline in European Organization for Research and Treatment of Cancer Quality of Life Cancer Specific Questionnaire With 20 Items (EORTC QLQ-MY20): Side Effects of Treatment at Specified Timepoints: Primary Analysis

End point description:

EORTC QLQ-MY20 is a validated questionnaire to assess the overall quality of life in subjects with multiple myeloma. Side effects of treatment domain is one of the four domain scores. Side effects of treatment domain consists of 10 questions and the score uses a 4-point scale (1 'Not at All' to 4 'Very Much'). Side Effects of Treatment Score (MYSE) is calculated as ([{Q37+Q38+Q39+Q40+Q41+Q42+Q43+Q44+Q45+Q46}/10]-1)/3*100. Scores are averaged, and transformed to 0-100 scale, where higher scores = more side effects and lower HRQL and lower scores = less side effects and better HRQL. Analysis was performed on ITT population. Here, 'n' signifies subjects with available data for each specified category.

End point title	HRQL: Change from Baseline in European Quality of Life Group Questionnaire with 5 dimensions and 5 levels per dimension (EQ-5D-5L): Health State Utility Index Value at Specified Timepoints: Primary Analysis

End point description:

The EQ-5D-5L is a standardized measure of health status that provides a general assessment of health utility and consist in 2 sections a descriptive system comprising 5 dimensions (mobility, self-care, usual activities, pain/discomfort and anxiety/depression) and Visual Analog Scale (VAS). Each dimension has a 5-level response: no problems, slight problems, moderate problems, severe problems, and extreme problems. Response options are measured with a 5-point Likert scale. The 5D-5L systems are converted into a single index utility score between 0 to 1, where higher score indicates a better health state and lower score indicate worse health state. Analysis was performed on ITT population. Here, 'n' signifies

subjects with available data for each specified category.

	Working Group Health Status Measure 5 Dimensions, 5 Levels (EQ-5D-5L) Score: Visual Analogic Scale (VAS) at Specified Timepoints: Primary Analysis

End point description:

The EQ-5D-5L is a standardised measure of health status that provides a general assessment of health utility and consist of 2 sections; descriptive system comprises 5 dimensions (mobility, self-care, usual activities, pain/discomfort and anxiety/depression) and a VAS. The VAS records the respondent's self-rated health on a 20 centimeter (cm) vertical VAS; the scale went from 0 (worst imaginable health state) to 100 (best imaginable health state). This information can be used as a quantitative measure of health as judged by the individual respondents. Analysis was performed on ITT population. Here, 'n' signifies subjects with available data for each specified category.

Secondary: Number of Subjects with Treatment-emergent Adverse Events (TEAEs) and Serious Adverse Events (SAEs): Final Analysis

End point title	Number of Subjects with Treatment-emergent Adverse Events (TEAEs) and Serious Adverse Events (SAEs): Final Analysis

End point description:

Adverse Event (AE) was defined as any untoward medical occurrence in a subject who received study drug and did not necessarily had a causal relationship with the treatment. TEAEs were defined as AEs that developed, worsened, or became serious during the treatment period (time from the first dose of study treatments up to 30 days after last dose of study treatments). An SAE was any untoward medical occurrence that at any dose: resulted in death, was life-threatening, required inpatient hospitalisation or prolongation of existing hospitalization, resulted in persistent or significant disability / incapacity, was a congenital anomaly/birth defect, was a medically important event. Analysis was performed on safety population which included all subjects who gave their informed consent and for whom there was confirmation of successful allocation of a randomisation number by the IRT and received at least one dose or a part of a dose of the study treatments.

End point type	Secondary

End point timeframe:

From first dose of study treatment up to 30 days after last dose of study treatment (maximum duration: up to 208 weeks for Kd arm and 215 weeks for IKd arm)

More information

Substantial protocol amendments (globally)

Were there any global substantial amendments to the protocol? Yes

Date	Amendment
21 August 2017	Infusion time of carfilzomib changed from 10 to 30 minutes to be consistent with SMPC/PI.
08 February 2018	Added objective to evaluate rate of VGPR/better in subjects who were MRD negative, Removed local laboratory testing for response to reduce number of blood samples drawn, Added Coombs test after treatment was initiated to assess assay interference, Changed frequency of pregnancy testing & added appendix with additional pregnancy testing requirements, Allowed urine pregnancy test. Added Grade 5 IARs & symptomatic NIMP overdose as AESIs, HR estimate & corresponding 95% CI was changed to HR & corresponding (1-2α)% (α: 1-sided nominal significance level: α=0.023 at final analysis & 0.005 at PFS interim analysis), Added serologic definition of active hepatitis B & C, Clarified instructions for duration of contraceptive measures, Clarified that further anti myeloma therapies be collected until OS analysis, Clarified that hydration prior carfilzomib could be <500 mL (but >250 mL) during 2 first infusions for subjects at risk of cardiac decompensation, G-CSF use no longer limited to 1st 3 cycles, Added treatment delays for subject convenience be avoided during 1st cycles, Modified recommended actions for low ANC & platelet count, Added delay for carfilzomib infusion if Grade 3-4 IR occurred during isatuximab infusion, Added Appendix with description of low dose body CT scan, Added PFS2 be assessed by Investigator, Added when confirmatory disease assessments be repeated at 3 month intervals, Added subjects with history of hypertension had to have controlled BP before dosing, Added hydration requirements predose if TLS observed at prior infusion.
02 July 2018	BMA is an invasive procedure and study allows up to 6 BMAs. To limit the number of BMAs, wording to trigger BMA was clarified, In absence of radiological and M protein progression, if clinical and biological data together provided clear evidence of clinical progression based on IRC judgement, the IRC could consider clinical progression as a PFS event, Czech Republic added to appendix list of countries with increased pregnancy testing, For exclusion criterion 12: Clarified that only curative radiotherapy was allowed within 14 days prior to randomization, Clarified that any therapy (not just chemotherapy) for other cancer should have been completed at least 5 years prior to enrollment, Allowed oral diphenhydramine or equivalent in country where there is no longer IV formulation, Added possibility of keeping the same hydration volume and lengthening the administration time in case of cardiac decompensation risk, Clarified rules for dose modifications, Added protocol recommendations regarding antibacterial prophylaxis and thromboprophylaxis, and added caution regarding cotreatment of dexamethasone with CYP3A inhibitor.
11 June 2019	Contraception duration after end of isatuximab changed from 3 months (12 weeks) to 5 months, Change in frequency of pregnancy test per country requirement for women with childbearing potential; pregnancy test was to be performed before each cycle and then monthly during the follow-up period up to 3 months (12 weeks) in the Kd arm and up to 5 months in the IKd arm.
11 September 2019	Implemented safety monitoring measures following identification of 2 new risks related to carfilzomib - Carfilzomib may increase risk of progressive multifocal leukoencephalopathy & Carfilzomib may increase risk of hepatitis B virus reactivation.

13 November 2019	Based on Health Authority feedback, censoring rules for the primary PFS analysis were changed; PFS2 was also updated according to the change. Hepatitis B virus DNA testing by polymerase chain reaction was added for patients with a positive hepatitis B surface antigen test and/or anti-Hepatitis B core antibody test, Added that any second primary malignancies during the follow-up period will be reported, Statistical sections were updated to match Statistical Analysis Plan amendment of July 2019 and changes to the PFS definition.
10 August 2020	Instruction for collecting hospitalization report and exams reports in case of serious adverse events section was updated. Switch to the approved Isatuximab administration mode with fixed volume. Option of direct supplies of oral investigational medicinal products (IMPs) was added in case of regional or national emergency declared by a governmental agency that resulted in travel restrictions, confinement, or restricted site access.
11 March 2021	Based on the positive interim PFS data, the treatment effect of IKd was expected to be better than initially anticipated in comparison to Kd. A descriptive PFS analysis was added when approximately 180 PFS events were reached. Based on more PFS events accumulated, this additional analysis would help to better characterize the distribution of PFS in a descriptive way for the IKd arm. With approximately 180 PFS events planned, the possibility of observing the median PFS time for the IKd arm was expected to be increased. Clarification of accidental or intentional overdose of isatuximab and carfilzomib was defined by each administration and dexamethasone defined by cycle. Appendix N was added for contingency measures for a regional or national emergency declared by a governmental agency.
14 September 2021	Addition of the possibility to omit carfilzomib dosing on Days 8 and 9 if a subject asked for a more convenient schedule and Investigator agreed because she/he judges that the maximum benefit was reached. If dexamethasone dosing was maintained on Days 8 and 9 while carfilzomib on Days 8 and 9 was omitted, possibility to re-increase the dose of dexamethasone if dose previously reduced, based on Investigator judgement.

Notes:

Interruptions (globally)

Were there any global interruptions to the trial? No

Limitations and caveats

None reported
