

## Clinical trial results:

### A Double-blind, Randomized, Active-controlled, Parallel-group Study of Paliperidone Palmitate 6 Month Formulation.

#### Summary

EudraCT number	2017-001941-28
Trial protocol	DE ES CZ PL IT
Global end of trial date	08 May 2020

#### Results information

Result version number	v1 (current)
This version publication date	13 May 2021
First version publication date	13 May 2021

#### Trial information

##### Trial identification

Sponsor protocol code	R092670PSY3015
-----------------------	----------------

##### Additional study identifiers

ISRCTN number	-
ClinicalTrials.gov id (NCT number)	NCT03345342
WHO universal trial number (UTN)	-

Notes:

#### Sponsors

Sponsor organisation name	Janssen Research & Development, LLC
Sponsor organisation address	920 US Highway 202, Raritan, NJ, United States, 08869-1420

Scientific contact	Clinical Registry Group, Janssen Research & Development, LLC, ClinicalTrialsEU@its.jnj.com

Notes:

#### Paediatric regulatory details

Is trial part of an agreed paediatric investigation plan (PIP)	No
Does article 45 of REGULATION (EC) No 1901/2006 apply to this trial?	No
Does article 46 of REGULATION (EC) No 1901/2006 apply to this trial?	No

Notes:

## Results analysis stage

Analysis stage	Final
Date of interim/final analysis	08 May 2020
Is this the analysis of the primary completion data?	No
Global end of trial reached?	Yes
Global end of trial date	08 May 2020
Was the trial ended prematurely?	No

Notes:

## General information about the trial

Main objective of the trial:

The main objective of the study was to demonstrate that injection cycles consisting of a single administration of paliperidone palmitate 6-month (PP6M) (700 or 1000 milligrams equivalent [mg eq.]) were not less effective than 2 sequentially administered injections of paliperidone palmitate 3-month (PP3M) (350 or 525 mg eq.) for the prevention of relapse in subjects with schizophrenia previously stabilized on corresponding doses of paliperidone palmitate 1-month (PP1M) (100 or 150 mg eq.) or PP3M (350 or 525 mg eq.).

Protection of trial subjects:

The study was conducted in accordance with the ethical principles that have their origin in the Declaration of Helsinki and that are consistent with Good Clinical Practices and applicable regulatory requirements. Safety evaluations included the assessment of adverse events (AEs), clinical laboratory tests, electrocardiogram (ECG), vital signs, physical examinations, extrapyramidal symptom assessment scales, injection site evaluations and Columbia suicide severity rating Scale (C-SSRS) for assessment of suicidal ideation throughout the study.

Background therapy: -

Evidence for comparator: -

Actual start date of recruitment	20 November 2017
Long term follow-up planned	Yes
Long term follow-up rationale	Safety
Long term follow-up duration	12 Months
Independent data monitoring committee (IDMC) involvement?	No

Notes:

## Population of trial subjects

### Subjects enrolled per country

Country: Number of subjects enrolled	Argentina: 55
Country: Number of subjects enrolled	Australia: 4
Country: Number of subjects enrolled	Brazil: 90
Country: Number of subjects enrolled	Bulgaria: 46
Country: Number of subjects enrolled	Czechia: 45
Country: Number of subjects enrolled	France: 7
Country: Number of subjects enrolled	Hong Kong: 4
Country: Number of subjects enrolled	Hungary: 20
Country: Number of subjects enrolled	India: 42
Country: Number of subjects enrolled	Italy: 8
Country: Number of subjects enrolled	Korea, Republic of: 4
Country: Number of subjects enrolled	Malaysia: 22
Country: Number of subjects enrolled	Mexico: 23

Country: Number of subjects enrolled	Poland: 68
Country: Number of subjects enrolled	Russian Federation: 139
Country: Number of subjects enrolled	Spain: 29
Country: Number of subjects enrolled	Taiwan: 31
Country: Number of subjects enrolled	Turkey: 26
Country: Number of subjects enrolled	Ukraine: 50
Country: Number of subjects enrolled	United States: 125
Worldwide total number of subjects	838
EEA total number of subjects	223

Notes:

<b>Subjects enrolled per age group</b>	
In utero	0
Preterm newborn - gestational age < 37 wk	0
Newborns (0-27 days)	0
Infants and toddlers (28 days-23 months)	0
Children (2-11 years)	0
Adolescents (12-17 years)	0
Adults (18-64 years)	822
From 65 to 84 years	16
85 years and over	0

## Subject disposition

### Recruitment

Recruitment details: -

### Pre-assignment

Screening details:

A total of 838 subjects were enrolled either in paliperidone palmitate 1-month (PP1M) or PP3M in Open-label (OL) Phase. Out of 838 subjects, 702 entered the Double-blind (DB) Phase. 702 subjects were randomized in DB Phase (PP6M: n=478; PP3M: n=224), out of which 202 and 416 subjects completed the study in PP3M and PP6M, respectively.

### Period 1

Period 1 title	Open-Label Phase
Is this the baseline period?	Yes
Allocation method	Not applicable
Blinding used	Not blinded

### Arms

Arm title	Open Label (OL) PP1M/PP3M (4 Months)
-----------	--------------------------------------

Arm description:

Subjects previously treated with oral antipsychotics, or injectable risperidone, or a moderate or higher dose of PP1M with previous initiation but without previous stabilization (where stabilization was defined as at least 3 months of injections with the last 2 doses being the same strength) received 1 to 5 intramuscular (IM) injections of paliperidone palmitate 1-month (PP1M) 50 to 150 milligrams equivalent (mg eq.) to achieve stability during Open-label (OL) transition phase and to initiate the OL maintenance phase. Subjects received single dose of IM injections of PP1M as 100 or 150 mg eq. or paliperidone palmitate 3-month (PP3M) as 350 or 525 mg eq was administered during the OL-maintenance Phase. Open-label phase duration was of 4 Months (OL-transition of 1 month and OL-maintenance of 3 months).

Arm type	Experimental
Investigational medicinal product name	PP3M (350 or 525 mg eq.)
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Solution for injection in pre-filled syringe
Routes of administration	Intramuscular use

Dosage and administration details:

Subjects were administered single dose of PP3M (350 or 525 mg eq.) injection for 3-month during the OL-maintenance Phase.

Investigational medicinal product name	PP1M (50 or 150 mg eq.)
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Solution for injection in pre-filled syringe
Routes of administration	Intramuscular use

Dosage and administration details:

Subjects were administered single dose of PP1M (50 or 150 mg eq.) injection for 1-month during the OL-transition Phase.

Number of subjects in period 1	Open Label (OL) PP1M/PP3M (4 Months)
Started	838
Completed	702
Not completed	136
Adverse event, serious fatal	1
Consent withdrawn by subject	57
Physician decision	4
Adverse event, non-fatal	30
Initiated prohibited medication	2
Other	15
Non-compliance with study drug	4
Lost to follow-up	9
Lack of efficacy	6
Protocol deviation	8

## Period 2

Period 2 title	Double Blind Phase (12 Months)
Is this the baseline period?	No
Allocation method	Randomised - controlled
Blinding used	Double blind
Roles blinded	Investigator, Monitor, Subject, Carer

## Arms

Are arms mutually exclusive?	No
<b>Arm title</b>	Double-blind (DB) PP3M

### Arm description:

Subjects received four doses of PP3M (350 or 525 mg eq.) IM injection for up to 12 months (one dose every 3 month) during DB phase.

Arm type	Active comparator
Investigational medicinal product name	PP3M
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Solution for injection in pre-filled syringe
Routes of administration	Intramuscular use

### Dosage and administration details:

Subjects were administered single dose of PP3M (350 or 525 mg eq.) injection every 3-month for up to 12 months during the DB Phase.

<b>Arm title</b>	Double-blind (DB) PP6M
------------------	------------------------

### Arm description:

Subjects received two doses of PP6M (700 or 1000 mg eq.) IM injection for 12 months (one dose every 6 months), during the DB Phase. To maintain blinding, subjects who were assigned to treatment with PP6M in this arm, received IM injections of matching placebo at the 3-month time points between their 6-month doses of PP6M drug.

Arm type	Experimental
Investigational medicinal product name	PP6M
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Solution for injection in pre-filled syringe
Routes of administration	Intramuscular use

**Dosage and administration details:**

Subjects were administered two doses of PP6M (700 or 1000 mg eq.) injection every 6-months for up to 12 Months during the DB Phase.

<b>Number of subjects in period 2</b>	Double-blind (DB) PP3M	Double-blind (DB) PP6M
Started	224	478
Completed	202	416
Not completed	22	62
Adverse event, serious fatal	2	1
Consent withdrawn by subject	16	38
Physician decision	1	4
Adverse event, non-fatal	1	6
Initiated prohibited medication	-	2
Other	1	3
Lost to follow-up	1	7
Protocol deviation	-	1

**Period 3**

Period 3 title	Follow-up Phase (12 Months)
Is this the baseline period?	No
Allocation method	Randomised - controlled
Blinding used	Double blind
Roles blinded	Subject, Investigator, Monitor, Carer

**Arms**

Are arms mutually exclusive?	No
<b>Arm title</b>	Follow-up (FU) Phase PP3M

**Arm description:**

Subjects who have received at least 1 dose of PP3M (350 or 525 mg eq.) IM injection during double-blind phase but then have relapsed or have met other relevant conditions for withdrawal or discontinuation can participate in the Follow-up phase PP3M (350 or 525 mg eq.) IM injection for up to 12 months for evaluating efficacy and safety.

Arm type	Active comparator
----------	-------------------

Investigational medicinal product name	PP3M
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Solution for injection in pre-filled syringe
Routes of administration	Intramuscular use

Dosage and administration details:

Subjects who received PP3M (350 or 525 mg eq.) IM injection during DB-phase were followed-up to 12 months during FU phase.

<b>Arm title</b>	Follow-up (FU) Phase PP6M
------------------	---------------------------

Arm description:

Subjects who received PP6M (700 or 1000 mg eq.) IM injection for up to 12 months for evaluating efficacy and safety

Arm type	Experimental
Investigational medicinal product name	PP6M
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Solution for injection in pre-filled syringe
Routes of administration	Intramuscular use

Dosage and administration details:

Subjects who received two doses of PP6M (700 or 1000 mg eq.) IM injection during DB-phase were followed-up to 12 months during FU phase.

<b>Number of subjects in period 3</b>	Follow-up (FU) Phase PP3M	Follow-up (FU) Phase PP6M
Started	42	109
Completed	34	78
Not completed	8	31
Consent withdrawn by subject	5	15
Physician decision	-	5
Adverse event, non-fatal	-	4
Other	3	1
Lost to follow-up	-	6

## Baseline characteristics

### Reporting groups

Reporting group title	Open Label (OL) PP1M/PP3M (4 Months)
-----------------------	--------------------------------------

Reporting group description:

### Secondary: Changes From Baseline in the Personal and Social Performance (PSP) Scale Total Score up to 12 Months of the DB Phase

End point title	Changes From Baseline in the Personal and Social Performance (PSP) Scale Total Score up to 12 Months of the DB Phase
-----------------	--

End point description:

The PSP scale assesses the degree of dysfunction a subject exhibits within 4 domains of behavior: (a) socially useful activities, (b) personal and social relationships, (c) self-care, and (d) disturbing and aggressive behavior. The results of the assessment are converted to a numerical score from 1 to 100 points, functioning (91 to 100 points), good functioning (81 to 90 points), mild difficulties (71 to 80 points), etc, as shown in the Manual of Assessments. Scores from 31 to 70 points indicate varying degrees of difficulty, and scores below 30 points indicate functioning so poor that intensive support or supervision is needed. DB ITT Analysis Set included all subjects who were randomly assigned to treatment group of either PP6M or PP3M during the DB Phase and received at least 1 dose of DB study drug. Here 'N' (number of subjects analyzed), included all subjects who were evaluable for this endpoint.

### Secondary: Change From Baseline in the Abnormal Involuntary Movement Scale (AIMS) Total Score

End point title	Change From Baseline in the Abnormal Involuntary Movement Scale (AIMS) Total Score
-----------------	--

End point description:

Dyskinesia was assessed using the AIMS. The AIMS is included in the Early Clinical Development Evaluation Unit Assessment Manual from the United States National Institute of Mental Health (NIMH). The AIMS rates 9 items about dyskinesia on scale as 0 = none, 1 = minimal, 2 = mild, 3 = moderate, and 4 = severe. It rates 1 item about the subject's awareness of abnormal movements as 0 = no awareness; 1 = aware, no distress; 2 = aware, mild distress; 3 = aware, moderate distress; and 4 = aware, severe distress. It has 2 yes/no questions about dental status. Negative change in score indicates improvement. DB ITT Analysis Set included all subjects who were randomly assigned to treatment group of either PP6M or PP3M during the DB Phase and received at least 1 dose of DB study drug. Here 'N' (number of subjects analyzed), included all subjects who were evaluable for this endpoint.

### Secondary: Number of Subjects Based on Columbia Suicide Severity Rating Scale (C-SSRS) Total Score

End point title	Number of Subjects Based on Columbia Suicide Severity Rating Scale (C-SSRS) Total Score
-----------------	---

End point description:

The C-SSRS is a clinical interview which provides a summary of both ideation and behavior that can be administered during any evaluation or risk assessment to identify the level and type of suicidality present. It can also be used during treatment to monitor for clinical worsening. The C-SSRS Baseline Version assesses suicidal behavior and ideation over a lifetime, and the C-SSRS "since last visit" version assesses those parameters over an interval. DB ITT Analysis Set included all subjects who were randomly assigned to treatment group of either PP6M or PP3M during the DB Phase and received at least 1 dose of DB study drug.

## Adverse events

### Adverse events information

Timeframe for reporting adverse events:

Up to 2.5 Years

Adverse event reporting additional description:

OL Safety set included all subjects who received at least 1 dose of OL study drug (excluding the first study subjects if re-screened), both transition and maintenance phases. DB Safety set included all subjects who were randomly assigned to treatment group either PP6M or PP3M during DB Phase and received at least 1 dose of DB study drug.

Assessment type	Non-systematic
-----------------	----------------

### Dictionary used

Dictionary name	MedDRA
-----------------	--------

Dictionary version	22.1
--------------------	------

### Reporting groups

Reporting group title	Open Label (OL) PP1M/PP3M (4 Months)
-----------------------	--------------------------------------

Reporting group description:

Subjects previously treated with oral antipsychotics, or injectable risperidone, or a moderate or higher dose of PP1M with previous initiation but without previous stabilization (where stabilization was defined as at least 3 months of injections with the last 2 doses being the same strength) received 1 to 5 intramuscular (IM) injections of paliperidone palmitate 1-month (PP1M) 50 to 150 milligrams equivalent (mg eq.) to achieve stability during Open-label (OL) transition phase and to initiate the OL maintenance phase. Subjects received single dose of IM injections of PP1M as 100 or 150 mg eq. or paliperidone palmitate 3-month (PP3M) as 350 or 525 mg eq was administered during the OL-maintenance Phase. Open-label phase duration was of 4 Months (OL-transition of 1 month and OL-maintenance of 3 months).

Reporting group title	Double-blind (DB) Phase PP3M
-----------------------	------------------------------

Reporting group description:

Subjects received four doses of PP3M (350 or 525 mg eq.) IM injection for up to 12 months (one dose every 3 month) during DB phase.

Reporting group title	Double-blind (DB) Phase PP6M
-----------------------	------------------------------

Reporting group description:

Subjects received two doses of PP6M (700 or 1000 mg eq.) IM injection for 12 months (one dose every 6 months), during the DB Phase. To maintain blinding, subjects who were assigned to treatment with PP6M in this arm, received IM injections of matching placebo at the 3-month time points between their 6-month doses of PP6M drug.

Reporting group title	Follow-up (FU) Phase PP3M
-----------------------	---------------------------

Reporting group description:

Subjects who have received at least 1 dose of PP3M (350 or 525 mg eq.) IM injection during double-blind phase but then have relapsed or have met other relevant conditions for withdrawal or discontinuation can participate in the Follow-up phase PP3M (350 or 525 mg eq.) IM injection for up to 12 months for evaluating efficacy and safety.

Reporting group title	Follow-up (FU) Phase PP6M
-----------------------	---------------------------

Reporting group description:

Subjects who received PP6M (700 or 1000 mg eq.) IM injection for up to 12 months for evaluating efficacy and safety

## More information

### Substantial protocol amendments (globally)

Were there any global substantial amendments to the protocol? Yes

Date	Amendment
21 March 2018	<p>a) Clarified text (1) on the version of Columbia Suicide Severity Rating Scale (C-SSRS) to be used at the screening and baseline visits, and all other visits; (2) vital signs to be collected every 3 months (Q3) during Double-blind (DB) Phase; (3) on the frequency of pre study Risperdal injections, and that subjects taking branded LAI of risperidone or paliperidone palmitate (PP) were permitted to enter the Transition Phase of the study. b) Added text (1) to maximize patient safety, exclude clinically unstable patients, and align with the R092670PSY3011 protocol; (2) to modify exclusion criterion #10 to minimize risk of fetal exposure to study drug; (3) to include risperidone 3 mg/day as a valid alternative at an equivalent dose in countries for which the paliperidone ER/prolonged-release (PR) formulations was not available; (3) to provide clearer guidance on timing of the end-of phase (EOP) visit; (4) to update Attachment 1 "Guidelines for the Intramuscular Injection of Paliperidone Palmitate or Placebo During the DB Phase" with clear instructions regarding the administration of injection; (5) to add exclusion criterion #26 excluding subjects with severe renal impairment per FDA request for clarification; (6) to add a formula to clarify the calculation of percent change of PANSS total score. c) Modified text (1) to remove renal insufficiency as part of exclusion criterion #7; (2) to limit participation in the Transition Phase to subjects taking INVEGA SUSTENNA or XEPLION PP1M formulations (3) to modify text to prevent the risk of unblinding study treatment while collecting prolactin samples for clinical laboratory testing; (4) to remove controlling stratification by the maintenance dose level in the primary efficacy analysis.</p> <p>Two hundred sixteen subjects were enrolled in the study under the original protocol and 464 subjects were enrolled under the first protocol amendment.</p>
28 September 2018	<p>a) Revised the number of pre-randomization injections of PP1M from a total of 6 (i.e., 5-month duration) to a total of 5 (i.e., 4-month duration) required before subjects were randomized to either PP3M or PP6M (paliperidone palmitate [PP] treatment group in the Double-blind Phase. This change was applied to subjects in the study's Open-label phases being treated with PP1M after the PP3M pre-randomization target was met, since these subjects were randomized directly from PP1M treatment. b) Updated and clarified supporting text, figures, and tables for consistency and to correct conflicting portions of the protocol that inadvertently increased the minimum duration of PP1M treatment from 4 months to 5 months. c) Removed text related to optional salivary biomarkers research.</p> <p>Fourteen subjects were enrolled under the second global protocol amendment</p>
11 February 2019	<p>a) To align with the primary endpoint, the duration of the Double-blind Phase was limited to 12 months by eliminating the double-blind extension period. b) The estimated number of subjects entering the Transition/Maintenance Phases was increased from a target sample size of 765 to 840 to match dropout/enrollment rates and to meet the randomization target of 549 subjects in the Double-blind Phase. c) Modified Inclusion Criterion 11 to clarify the method of contraception in criterion 10 was applicable to female partners of male study subjects. d) Removed collection of blood biomarkers from the protocol.</p> <p>The third global amendment was implemented after all subjects had been enrolled.</p>

Notes:

### Interruptions (globally)

Were there any global interruptions to the trial? No

## Limitations and caveats

None reported
