

Clinical trial results: Methylphenidate versus placebo for fatigue in advanced cancer (MePFAC)

Summary

EudraCT number	2017-001950-33
Trial protocol	GB
Global end of trial date	03 July 2023

Results information

Result version number	v1 (current)
This version publication date	16 July 2024
First version publication date	16 July 2024

Trial information

Trial identification

Sponsor protocol code	15/0592
-----------------------	---------

Additional study identifiers

ISRCTN number	ISRCTN79478762
ClinicalTrials.gov id (NCT number)	-
WHO universal trial number (UTN)	-

Sponsors

Sponsor organisation name	University College London
Sponsor organisation address	Gower Street, London, United Kingdom, WC1E 6BT
Public contact	Priment CTU, Marie Curie Palliative Care Research Department, UCL, priment@ucl.ac.uk
Scientific contact	Paddy Stone, Marie Curie Palliative Care Research Department, UCL, p.stone@ucl.ac.uk

Notes:

Paediatric regulatory details

Is trial part of an agreed paediatric investigation plan (PIP)	No
Does article 45 of REGULATION (EC) No 1901/2006 apply to this trial?	No
Does article 46 of REGULATION (EC) No 1901/2006 apply to this trial?	No

Notes:

Results analysis stage

Analysis stage	Final
Date of interim/final analysis	04 March 2024
Is this the analysis of the primary completion data?	Yes
Primary completion date	03 July 2023
Global end of trial reached?	Yes
Global end of trial date	03 July 2023
Was the trial ended prematurely?	No

Notes:

General information about the trial

Main objective of the trial:

What is the clinical effectiveness of methylphenidate versus placebo for cancer-related fatigue in patients receiving palliative care?

Protection of trial subjects:

During the trial participants were treated in accordance with routine clinical care and under supervision of a consultant in palliative medicine (Principal Investigators at each site). Participants were contacted on a weekly basis to elicit adverse effects. Non-serious adverse events were recorded weekly and assessed for severity. Serious Adverse Events (SAEs) and Suspected Unexpected Serious Adverse Reactions (SUSARS) were additionally assessed for causality and expectedness and were reported to the sponsor within 24 hours.

Background therapy:

Participants received usual care in both study arms in addition to the trial intervention

Evidence for comparator:

Methylphenidate is a psychostimulant drug that is widely used as part of the management of people with Attention Deficit Hyperactivity Disorder. It has also been evaluated as a potential treatment for cancer-related fatigue. Some trials and meta-analyses have suggested that this medication may also be effective for relief of cancer related fatigue, but the evidence is mixed with many trials showing no benefit. In the context of ongoing uncertainty about its role, this research was conducted in response to a commissioned call by the NIHR, and placebo was considered to be a suitable comparator.

Actual start date of recruitment	29 June 2018
Long term follow-up planned	No
Independent data monitoring committee (IDMC) involvement?	Yes

Notes:

Population of trial subjects

Subjects enrolled per country

Country: Number of subjects enrolled	United Kingdom: 159
Worldwide total number of subjects	159
EEA total number of subjects	0

Notes:

Subjects enrolled per age group

In utero	0
Preterm newborn - gestational age < 37 wk	0
Newborns (0-27 days)	0

Infants and toddlers (28 days-23 months)	0
Children (2-11 years)	0
Adolescents (12-17 years)	0
Adults (18-64 years)	81
From 65 to 84 years	76
85 years and over	2

Subject disposition

Recruitment

Recruitment details:

Across 17 active sites (hospices, hospital and community palliative care teams), 162 participants were randomised (73 men; mean 65.8 [SD 10.3] years). The first patient was enrolled on 29th June 2018 and the last patient randomised on 27th April 2023. The last visit for the last patient was 3rd July 2023, which is when the trial ended.

Pre-assignment

Screening details:

297 patients were screened
54 did not meet the inclusion criteria
78 met an exclusion criterion
3 died before consent/randomisation

Period 1

Period 1 title	Baseline
Is this the baseline period?	Yes
Allocation method	Randomised - controlled
Blinding used	Double blind
Roles blinded	Subject, Investigator, Data analyst, Assessor

Blinding implementation details:

Identical appearance between methylphenidate and placebo

Arms

Are arms mutually exclusive?	Yes
------------------------------	-----

Arm title	Intervention
------------------	--------------

Arm description:

Methylphenidate arm

Arm type	Experimental
Investigational medicinal product name	Methylphenidate
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Tablet
Routes of administration	Oral use

Dosage and administration details:

Initially participants were prescribed 1 tablet twice daily (=methylphenidate 10mgs/day) or matching placebo. Participants were contacted every week and the dose of medication was adjusted (either up or down) over the course of the first six weeks of the study (dose titration phase), up to a maximum of 12 tablets/day (=60mgs/day). Thereafter, for the next two weeks (dose maintenance phase), the dose of medication was not increased any further (although it could be reduced in response to adverse effects). During the next week (dose tapering phase) the dose was reduced and then the medication was stopped completely for the last week of the trial.

Arm title	Placebo
------------------	---------

Arm description:

Placebo tablets individually dose-titrated in same manner as in active arm

Arm type	Placebo
Investigational medicinal product name	Placebo
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Tablet
Routes of administration	Oral use

Dosage and administration details:

Initially participants were prescribed 1 tablet twice daily. Participants were contacted every week and

the dose of medication was adjusted (either up or down) over the course of the first six weeks of the study (dose titration phase), up to a maximum of 12 tablets/day. Thereafter, for the next two weeks (dose maintenance phase), the dose of medication was not increased any further (although it could be reduced in response to adverse effects). During the next week (dose tapering phase) the dose was reduced and then the medication was stopped completely for the last week of the trial.

Statistical analyses

Statistical analysis title	Baseline to 6 weeks
----------------------------	---------------------

Statistical analysis description:

Analysis of the outcome used a mixed effects linear model. Each participant provided two values, one for baseline and one for follow-up, with random intercepts for participant. Fixed effects were time point (baseline or follow up), randomized treatment, and the stratification factors (except site and fatigue severity).

Comparison groups	Intervention v Placebo

-----------------------	---------

Reporting group description: -

Serious adverse events	Methylphenidate arm	Placebo	
Total subjects affected by serious adverse events			
subjects affected / exposed	19 / 82 (23.17%)	16 / 77 (20.78%)	
number of deaths (all causes)	6	2	
number of deaths resulting from adverse events	0	0	
Neoplasms benign, malignant and unspecified (incl cysts and polyps)			
Progression of underlying cancer			
subjects affected / exposed	5 / 82 (6.10%)	4 / 77 (5.19%)	
occurrences causally related to treatment / all	0 / 6	0 / 4	
deaths causally related to treatment / all	0 / 5	0 / 1	
Cardiac disorders			
Tachycardia			
subjects affected / exposed	3 / 82 (3.66%)	0 / 77 (0.00%)	
occurrences causally related to treatment / all	1 / 3	0 / 0	
deaths causally related to treatment / all	0 / 1	0 / 0	
Worsening of heart failure			
subjects affected / exposed	0 / 82 (0.00%)	1 / 77 (1.30%)	
occurrences causally related to treatment / all	0 / 0	0 / 1	
deaths causally related to treatment / all	0 / 0	0 / 0	
Nervous system disorders			
Facial droop			

subjects affected / exposed	0 / 82 (0.00%)	1 / 77 (1.30%)	
occurrences causally related to treatment / all	0 / 0	0 / 1	
deaths causally related to treatment / all	0 / 0	0 / 0	
Cord compression			
subjects affected / exposed	1 / 82 (1.22%)	0 / 77 (0.00%)	
occurrences causally related to treatment / all	0 / 1	0 / 0	
deaths causally related to treatment / all	0 / 0	0 / 0	
Transient loss of consciousness			
subjects affected / exposed	0 / 82 (0.00%)	1 / 77 (1.30%)	
occurrences causally related to treatment / all	0 / 0	0 / 1	
deaths causally related to treatment / all	0 / 0	0 / 0	
Dizziness			
subjects affected / exposed	0 / 82 (0.00%)	1 / 77 (1.30%)	
occurrences causally related to treatment / all	0 / 0	0 / 1	
deaths causally related to treatment / all	0 / 0	0 / 0	
Blood and lymphatic system disorders			
Bleeding or clotting			
subjects affected / exposed	0 / 82 (0.00%)	3 / 77 (3.90%)	
occurrences causally related to treatment / all	0 / 0	1 / 3	
deaths causally related to treatment / all	0 / 0	0 / 0	
General disorders and administration site conditions			
Pain			
subjects affected / exposed	2 / 82 (2.44%)	2 / 77 (2.60%)	
occurrences causally related to treatment / all	0 / 2	0 / 2	
deaths causally related to treatment / all	0 / 0	0 / 0	
Fall			
subjects affected / exposed	1 / 82 (1.22%)	0 / 77 (0.00%)	
occurrences causally related to treatment / all	0 / 1	0 / 0	
deaths causally related to treatment / all	0 / 0	0 / 0	
Gastrointestinal disorders			
Ascites			
subjects affected / exposed	0 / 82 (0.00%)	1 / 77 (1.30%)	
occurrences causally related to treatment / all	0 / 0	0 / 1	
deaths causally related to treatment / all	0 / 0	0 / 0	

Mucositis / diarrhoea			
subjects affected / exposed	2 / 82 (2.44%)	0 / 77 (0.00%)	
occurrences causally related to treatment / all	1 / 2	0 / 0	
deaths causally related to treatment / all	0 / 0	0 / 0	
Respiratory, thoracic and mediastinal disorders			
Pleural effusion			
subjects affected / exposed	1 / 82 (1.22%)	2 / 77 (2.60%)	
occurrences causally related to treatment / all	0 / 1	0 / 3	
deaths causally related to treatment / all	0 / 0	0 / 0	
Hepatobiliary disorders			
Impaired liver function			
subjects affected / exposed	2 / 82 (2.44%)	0 / 77 (0.00%)	
occurrences causally related to treatment / all	1 / 2	0 / 0	
deaths causally related to treatment / all	0 / 0	0 / 0	
Renal and urinary disorders			
Acute Kidney injury, haematuria, kidney pain			
subjects affected / exposed	1 / 82 (1.22%)	2 / 77 (2.60%)	
occurrences causally related to treatment / all	0 / 1	0 / 2	
deaths causally related to treatment / all	0 / 0	0 / 0	
Infections and infestations			
Sepsis			
subjects affected / exposed	5 / 82 (6.10%)	3 / 77 (3.90%)	
occurrences causally related to treatment / all	0 / 6	0 / 6	
deaths causally related to treatment / all	0 / 0	0 / 1

Gastrointestinal disorders			
Abdominal pain			
Additional description: Self-reported as "mild, moderate or severe" at any time over the 10-week period			
subjects affected / exposed occurrences (all)	47 / 82 (57.32%) 257	45 / 77 (58.44%) 217	
Diarrhoea			
Additional description: Self-reported as "mild, moderate or severe" at any time over the 10-week period			
subjects affected / exposed occurrences (all)	40 / 82 (48.78%) 113	41 / 77 (53.25%) 148	
Nausea			
Additional description: Self-reported as "mild, moderate or severe" at any time over the 10-week period			

subjects affected / exposed occurrences (all)	57 / 82 (69.51%) 228	43 / 77 (55.84%) 167	
Vomiting	Additional description: Self-reported as "mild, moderate or severe" at any time over the 10-week period		
subjects affected / exposed occurrences (all)	31 / 82 (37.80%) 74	21 / 77 (27.27%) 56	
Dry mouth	Additional description: Self-reported as "severe" at any time over the 10-week period		
subjects affected / exposed occurrences (all)	60 / 82 (73.17%) 359	53 / 77 (68.83%) 300	
Other GI symptoms	Additional description: Self-reported as "mild, moderate or severe" at any time over the 10-week period		
subjects affected / exposed occurrences (all)	43 / 82 (52.44%) 101	42 / 77 (54.55%) 92	
Respiratory, thoracic and mediastinal disorders			
Cough	Additional description: Self-reported as "mild, moderate or severe" at any time over the 10-week period		
subjects affected / exposed occurrences (all)	49 / 82 (59.76%) 189	41 / 77 (53.25%) 145	
Sore throat	Additional description: Self-reported as "mild, moderate or severe" at any time over the 10-week period		
subjects affected / exposed occurrences (all)	35 / 82 (42.68%) 82	33 / 77 (42.86%) 76	
Other respiratory AEs	Additional description: Self-reported as "mild, moderate or severe" at any time over the 10-week period		
subjects affected / exposed occurrences (all)	44 / 82 (53.66%) 117	37 / 77 (48.05%) 121	
Skin and subcutaneous tissue disorders			
Hair loss	Additional description: Self-reported as "mild, moderate or severe" at any time over the 10-week period		
subjects affected / exposed occurrences (all)	25 / 82 (30.49%) 76	18 / 77 (23.38%) 67	
Itch	Additional description: Self-reported as "mild, moderate or severe" at any time over the 10-week period		
subjects affected / exposed occurrences (all)	40 / 82 (48.78%) 126	32 / 77 (41.56%) 108	
Skin rashes	Additional description: Self-reported as "mild, moderate or severe" at any time over the 10-week period		
subjects affected / exposed occurrences (all)	27 / 82 (32.93%) 65	22 / 77 (28.57%) 46	
Other skin or hair symptoms	Additional description: Self-reported as "mild, moderate or severe" at any time over the 10-week period		

subjects affected / exposed occurrences (all)	11 / 82 (13.41%) 16	16 / 77 (20.78%) 29	
Psychiatric disorders			
Anxiety	Additional description: Self-reported as "mild, moderate or severe" at any time over the 10-week period		
subjects affected / exposed occurrences (all)	50 / 82 (60.98%) 178	42 / 77 (54.55%) 175	
Depression	Additional description: Self-reported as "mild, moderate or severe" at any time over the 10-week period		
subjects affected / exposed occurrences (all)	42 / 82 (51.22%) 149	29 / 77 (37.66%) 102	
Irritability	Additional description: Self-reported as "mild, moderate or severe" at any time over the 10-week period		
subjects affected / exposed occurrences (all)	51 / 82 (62.20%) 211	50 / 77 (64.94%) 186	
Aggression	Additional description: Self-reported as "mild, moderate or severe" at any time over the 10-week period		
subjects affected / exposed occurrences (all)	11 / 82 (13.41%) 28	16 / 77 (20.78%) 32	
Mood swings	Additional description: Self-reported as "mild, moderate or severe" at any time over the 10-week period		
subjects affected / exposed occurrences (all)	10 / 82 (12.20%) 93	10 / 77 (12.99%) 87	
Abnormal beviour	Additional description: Self-reported as "mild, moderate or severe" at any time over the 10-week period		
subjects affected / exposed occurrences (all)	6 / 82 (7.32%) 6	5 / 77 (6.49%) 5	
Other mood or mental state symptoms	Additional description: Self-reported as "mild, moderate or severe" at any time over the 10-week period		
subjects affected / exposed occurrences (all)	10 / 82 (12.20%) 12	10 / 77 (12.99%) 14	
Musculoskeletal and connective tissue disorders			
Abnormal muscle movements (twitches)	Additional description: Self-reported as "mild, moderate or severe" at any time over the 10-week period		
subjects affected / exposed occurrences (all)	36 / 82 (43.90%) 138	37 / 77 (48.05%) 131	
Joint pain	Additional description: Self-reported as "mild, moderate or severe" at any time over the 10-week period		
subjects affected / exposed occurrences (all)	53 / 82 (64.63%) 251	52 / 77 (67.53%) 243	
Metabolism and nutrition disorders			

Anorexia	Additional description: Self-reported as "mild, moderate or severe" at any time over the 10-week period		
	subjects affected / exposed	63 / 82 (76.83%)	55 / 77 (71.43%)
	occurrences (all)	279	231
Weight loss	Additional description: Self-reported as "mild, moderate or severe" at any time over the 10-week period		
	subjects affected / exposed	38 / 82 (46.34%)	43 / 77 (55.84%)
	occurrences (all)	125	99

More information

Substantial protocol amendments (globally)

Were there any global substantial amendments to the protocol? Yes

Date	Amendment
28 October 2018	<p>CHANGES TO INCLUSION CRITERIA</p> <p>Prognosis of 2-12 months removed as an inclusion criterion</p> <p>Requirement to be under care of Specialist Palliative Care team changed to requirement to be receiving generalist or specialist palliative care</p> <p>CHANGES TO EXCLUSION CRITERIA</p> <p>Cardiovascular exclusions modified so that it was only uncontrolled heart failure, uncontrolled angina or myocardial infarction in the last one year that were regarded as exclusions</p> <p>Cerebrovascular exclusions modified so that it was only stroke in the last one year that was regarded as an exclusion</p> <p>Alcohol or drug dependency exclusion criterion was modified so that it was only dependency within last one year that was regarded as an exclusion</p> <p>Estimated Glomerular Filtration Rate (eGFR) exclusion was reduced from <60mls/hr to <45mls/hr</p> <p>Alkaline Phosphatase (ALP) levels no longer regarded as an exclusion</p> <p>Exclusion of inpatient hospital or hospice patients was removed</p>
20 May 2019	<p>CHANGES TO EXCLUSION CRITERIA</p> <p>Exclusion of patients who are currently in another Clinical Trial of an Investigational Medicinal Product (CTIMP) expanded to include patients who have been on a CTIMP within last four weeks</p> <p>CHANGES TO TRIAL PROCEDURES</p> <p>Window for dose titration increased from ± 3 days to ± 4 days</p>
22 August 2019	<p>CHANGES TO TRIAL PROCEDURES</p> <p>Collection of cancer diagnosis and Eastern Cooperative Oncology Group Performance Status from participants at screening/baseline</p> <p>Collection of baseline Adverse Event data</p>
17 March 2020	<p>CHANGES MADE IN RESPONSE TO COVID PANDEMIC</p> <p>Emergency action to stop new recruitment, taper the dose of methylphenidate for patients already on trial and then withdrawal of medication. Enrolled participants remained on follow-up but did not take investigational medicinal product or placebo.</p>
06 July 2020	<p>CHANGES MADE IN RESPONSE TO COVID PANDEMIC</p> <p>Telephone assessments permitted to replace face-to-face visits at weeks 3, 6 and 10</p> <p>Home delivery of IMP permitted</p> <p>Need for separate face-to-face screening visit (with written informed consent) was removed. Consent for screening tests (blood tests, blood pressure and pulse) could now be verbal rather than written</p> <p>Screening and enrolment visits could be merged</p> <p>CHANGES TO SAMPLE SIZE</p> <p>Sample size for randomised participants changed from 230 to 215-230</p>

09 January 2023	<p>CHANGES TO SECONDARY OUTCOMES References to carer satisfaction as an outcome were removed from the protocol - Inclusion of carer satisfaction in the original protocol was an error, no data were collected on this outcome. Anxiety and depression were specified as secondary outcomes - Data on anxiety and depression had not previously been explicitly specified as secondary outcomes.</p> <p>CHANGES TO SAMPLE SIZE Sample size reduced from 215-230 randomised participants to 162-230 randomised participants. Estimated number of evaluable participants changed from 172 to 130-172: In light of below expected recruitment rates, funder agreed to extend trial to achieve at least 130 evaluable participants (estimated to require at least 162 randomised participants).</p>
-----------------	---

Notes:

Interruptions (globally)

Were there any global interruptions to the trial? Yes

Date	Interruption	Restart date
19 March 2020	Recruitment suspended nationally due to COVID pandemic	31 October 2020

Notes:

Limitations and caveats

None reported
