

Clinical trial results:

Double-blind, randomised, placebo-controlled, multicentre, Phase IIa study to investigate the effect of phosphorylcholine human monoclonal antibody (PC mAb) 3G10 on arterial inflammation, together with safety and tolerability, in subjects with elevated lipoprotein a (Lp[a])

Summary

EudraCT number	2017-002106-13
Trial protocol	SE NL
Global end of trial date	03 July 2018

Paediatric regulatory details

Is trial part of an agreed paediatric investigation plan (PIP)	No
Does article 45 of REGULATION (EC) No 1901/2006 apply to this trial?	No
Does article 46 of REGULATION (EC) No 1901/2006 apply to this trial?	No

Notes:

Results analysis stage

Analysis stage	Final
Date of interim/final analysis	05 July 2018
Is this the analysis of the primary completion data?	Yes
Primary completion date	19 March 2018
Global end of trial reached?	Yes
Global end of trial date	03 July 2018
Was the trial ended prematurely?	Yes

Notes:

General information about the trial

Main objective of the trial:

The primary objective was to assess the effects of four 250 mg 3G10 once monthly intravenous injections on monocyte function ex vivo.

Protection of trial subjects:

The study was performed in accordance with the ethical principles that have their origin in the Declaration of Helsinki that are consistent with International Council for Harmonisation of Technical Requirements for Pharmaceuticals for Human Use (ICH)/Good Clinical Practice (GCP) and applicable regulatory requirements.

Background therapy: -

Evidence for comparator: -

Actual start date of recruitment	22 September 2017
Long term follow-up planned	No
Independent data monitoring committee (IDMC) involvement?	Yes

Notes:

Population of trial subjects**Subjects enrolled per country**

Country: Number of subjects enrolled	Netherlands: 1
Country: Number of subjects enrolled	Sweden: 9
Worldwide total number of subjects	10
EEA total number of subjects	10

Notes:

Subjects enrolled per age group

In utero	0
Preterm newborn - gestational age < 37 wk	0
Newborns (0-27 days)	0
Infants and toddlers (28 days-23 months)	0
Children (2-11 years)	0
Adolescents (12-17 years)	0
Adults (18-64 years)	4
From 65 to 84 years	6
85 years and over	0

Subject disposition

Recruitment

Recruitment details:

A total of 40 Male and female subjects, age above 50 years, with elevated Lp(a) (above 50 mg/dL) were planned for inclusion. Potential study subjects were identified by advertising in local media and by review of pre-existing databases at the study sites. The study was conducted in two countries—the Netherlands and Sweden.

Pre-assignment

Screening details:

Assessments included: informed consent; demographics, medications, and med./surg. history; eligibility; weight; height; physical exam.; vital signs (blood press. & body temp); ECG (incl. heart rate); pregnancy; FSH & oestradiol; HIV, Hepatitis B, C; Lp(a); Haematology, clin. chemistry, coagulation complement; urine analysis; and concomitant meds

Pre-assignment period milestones

Number of subjects started	10
Number of subjects completed	10

Period 1

Period 1 title	overall trial (overall period)
Is this the baseline period?	Yes
Allocation method	Randomised - controlled
Blinding used	Double blind
Roles blinded	Subject, Investigator, Monitor, Data analyst, Carer, Assessor

Blinding implementation details:

This was a double-blinded study, the treatment was blinded to the subject, the investigators and the personnel administering IMP.

The code envelopes were to be kept in a secure place with limited access. In case of emergency or other situation that it was crucial for the Investigator to know which treatment the subject had received, the code envelope might be opened. If the code was broken, this was to be documented on the treatment code envelope and in the subject's hospital records.

Arms

Are arms mutually exclusive?	Yes
Arm title	3G10

Arm description:

PC-mAb 3G10 (referred to as 3G10), 250 mg, intravenous injections/infusions.

Batch numbers: 8047563 (Apotek Produktion & Laboratorier [APL], expiry date: 2018-03-31), 8047627 (APL, expiry date: 2018-03-31)

Arm type	Experimental
Investigational medicinal product name	PC-mAb 3G10
Investigational medicinal product code	
Other name	3G10
Pharmaceutical forms	Concentrate for solution for infusion
Routes of administration	Intravenous use

Dosage and administration details:

Subjects were allocated to receive either 250 mg of the test product 3G10 or the reference product, matching placebo. Each subject was to receive once monthly intravenous injections for four months. At the dosing day, subjects received each dose of IMP as an intravenous infusion for 30 minutes and remained in the clinic for supervision for 1 hour after each dosing.

Arm title	Placebo
------------------	---------

Arm description:

The reference product/placebo was commercially available acquired at the local hospital pharmacies and contained sterile sodium chloride 0.9% solution for infusion compliant to the European Pharmacopoeia (Ph.Eur).

Arm type	Placebo
Investigational medicinal product name	Placebo

Primary: Trans-endothelial migration

End point title	Trans-endothelial migration ^[1]
End point description: Blood sampling for assessment of the primary endpoint, TEM in monocytes isolated from treated subjects, was performed pre-dose at Visit 4 (1st dose) and at follow-up (Visit 11). The ex vivo measurement of monocyte function was performed using the TEM assay. The total number of monocytes and the number of transmigrated monocytes were counted using images obtained with a confocal laser microscope and results were presented as % of migrated monocytes.	
End point type	Primary
End point timeframe: From Visit 4 to Visit 11	
Notes: [1] - No statistical analyses have been specified for this primary end point. It is expected there is at least one statistical analysis for each primary end point. Justification: No formal statistical analysis (statistical tests etc.) was performed, efficacy data are presented descriptively in subject data listings.

More information

Substantial protocol amendments (globally)

Were there any global substantial amendments to the protocol? Yes

Date	Amendment
19 September 2017	<p>Clarification of exclusion criterion 2 to ensure exclusion of subjects having illnesses between the screening visit and the randomization visit.</p> <p>Clarification of exclusion criterion 8. A majority of patients with Lp(a) >50 mg/dL, which is required to be included in the study, have ongoing treatment with statins or other lipid lowering medications. New data indicates that the added population is equally treatment sensitive as statin/PCSK9 naïve patients with Lp(a) >50 mg/dL. Excluding these patients will also greatly prolong the inclusion time and exceptions are therefore needed.</p> <p>Correction of study schedule.</p>

Notes:

Interruptions (globally)

Were there any global interruptions to the trial? Yes

Date	Interruption	Restart date
23 November 2017	<p>On 2017-11-23, a subject reported a suspected anaphylactic reaction. The event was reported as a SUSAR as the subject had been administered with active IMP 3G10 (code broken by investigator). The subject was withdrawn and a voluntary temporary halt in dosing took place between 2017-11-23 and 2017-11-27. After recommendation from the iSRC, including principal investigators, and subsequent decision from the Sponsor, as well as phone and mail contacts with the assigned clinical assessor at the Swedish CA, further exposure in the study was continued on 2017-11-28 for all remaining enrolled subjects.</p> <p>All enrolled and screened subjects received information about the reaction before deciding to continue. One subject in screening decided to withdraw consent. After the restart of the study, 4 additional subjects were randomised to treatment. All doses were given without any reported deviations during administration.</p>	28 November 2017

17 January 2018	<p>On 2018-01-10, another subject reported a suspected anaphylactic reaction. This event was also reported as SUSAR as the subject had been administered active IMP 3G10 (code broken by investigator). After this, the Sponsor decided, after consulting the iSRC, to put the study on temporary halt (notification submitted in the Netherlands 2018-01-17 and in Sweden 2018-01-23). This was to ensure the safety and wellbeing of the participants and no participants were exposed to the study drug after 2018-01-10.</p> <p>An cause investigation was initiated and a decision was taken by the iSRC to handle all subjects as early withdrawals e.g. they were invited to attend visits 11 and 12 (End of Trial safety visit). The last study visit (Visit 12) was attended on 2018-03-19.</p> <p>On 2018-07-03, the study was formally terminated and the declaration of the end of trial form was submitted to the CA in Sweden and on 2018-07-04 to the CA in the Netherlands. A total of 10 subjects were randomised and received treatment with 3G10/placebo.</p>	-
-----------------	--	---

Notes:

Limitations and caveats

Limitations of the trial such as small numbers of subjects analysed or technical problems leading to unreliable data.

Due to the early termination of the study, it was decided by the Sponsor that the formal statistical analysis planned in the CSP was not to be performed. Only subject listings were created.

Notes:
