

## Clinical trial results:

### A Phase I/II Open-Label, Multi-center Study of the Safety and Efficacy of IMCnyeso, an HLA-A\* 0201-Restricted, NY-ESO-1 and LAGE-1A-specific soluble T Cell Receptor and Anti-CD3 Bi-specific Molecule, as a Single Agent in HLA-A\* 0201 Positive Patients With Advanced NY-ESO-1 and/or LAGE-1A Positive Cancer

#### Summary

EudraCT number	2017-002243-15
Trial protocol	GB
Global end of trial date	10 June 2021

#### Results information

Result version number	v1 (current)
This version publication date	10 March 2022
First version publication date	10 March 2022

#### Trial information

##### Trial identification

Sponsor protocol code	IMCnyeso-101
-----------------------	--------------

##### Additional study identifiers

ISRCTN number	-
ClinicalTrials.gov id (NCT number)	NCT03515551
WHO universal trial number (UTN)	-

Notes:

#### Sponsors

Sponsor organisation name	Immunocore, Ltd.
Sponsor organisation address	92 Park Drive, Milton Park, Abingdon, United Kingdom, Oxon, OX14 4RY
Public contact	Study Director, Immunocore Ltd., 001 844IMMUNO1, clinicaltrials@immunocore.com
Scientific contact	Study Director, Immunocore Ltd., 001 844IMMUNO1, clinicaltrials@immunocore.com

Notes:

#### Paediatric regulatory details

Is trial part of an agreed paediatric investigation plan (PIP)	No
Does article 45 of REGULATION (EC) No 1901/2006 apply to this trial?	No
Does article 46 of REGULATION (EC) No 1901/2006 apply to this trial?	No

Notes:

## Results analysis stage

Analysis stage	Final
Date of interim/final analysis	10 June 2021
Is this the analysis of the primary completion data?	No
Global end of trial reached?	Yes
Global end of trial date	10 June 2021
Was the trial ended prematurely?	Yes

Notes:

## General information about the trial

Main objective of the trial:

This was planned to be a multi-center, open label, dose finding Phase 1/2 study of single agent IMCnyeso administered in subjects with NY-ESO-1 and/or LAGE-A1 positive tumors. The primary objective of the dose escalation phase (Phase 1) was to determine the maximum tolerated dose (MTD) and/or recommended Phase 2 dose (RP2D) of IMCnyeso in subjects with advanced solid tumors. Preliminary efficacy was to be evaluated in Phase 2. The study was terminated early (prior to initiation of Phase 2) by the Sponsor as a strategic decision (not based on any safety signal).

Protection of trial subjects:

This clinical study was designed and was implemented and reported in accordance with the ICH Harmonised Tripartite Guidelines for Good Clinical Practice E6 (R1), with applicable local regulations (including European Directive 2001/20/EC and United States Code of Federal Regulations, CFR Title 21), and with the ethical principles laid down in the Declaration of Helsinki (2013).

Background therapy: -

Evidence for comparator: -

Actual start date of recruitment	15 June 2018
Long term follow-up planned	No
Independent data monitoring committee (IDMC) involvement?	No

Notes:

## Population of trial subjects

### Subjects enrolled per country

Country: Number of subjects enrolled	United Kingdom: 10
Country: Number of subjects enrolled	Canada: 3
Country: Number of subjects enrolled	United States: 15
Worldwide total number of subjects	28
EEA total number of subjects	0

Notes:

### Subjects enrolled per age group

In utero	0
Preterm newborn - gestational age < 37 wk	0
Newborns (0-27 days)	0
Infants and toddlers (28 days-23 months)	0

Children (2-11 years)	0
Adolescents (12-17 years)	0
Adults (18-64 years)	23
From 65 to 84 years	5
85 years and over	0

## Subject disposition

### Recruitment

Recruitment details:

The sponsor elected to not proceed with the efficacy determining expansion phase (Phase 2) of IMCnyeso-101 for strategic reasons. Phase 2 data were not collected. As of 25 Mar 2021, further enrollment into the Phase 1 dose escalation phase was discontinued and last patient visit was 10 June 2021.

### Pre-assignment

Screening details:

There were a total of 28 unique subjects; one subject from the 10 mcg cohort was sequentially enrolled in the 30-100 mcg cohort. Participants who were receiving study drug were allowed to continue treatment until unacceptable toxicity, disease progression, or other reason to discontinue occurred.

### Period 1

Period 1 title	Overall study (overall period)
Is this the baseline period?	Yes
Allocation method	Non-randomised - controlled
Blinding used	Not blinded

### Arms

Are arms mutually exclusive?	No
<b>Arm title</b>	Phase 1: IMCnyeso 3 mcg

Arm description:

Single-agent IMCnyeso at 3 mcg dosed weekly intravenously on Days 1, 8, 15, and 22 of each 4-week cycle using a fixed-dose regimen

Arm type	Experimental
Investigational medicinal product name	IMCnyeso
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Solution for infusion
Routes of administration	Intravenous use

Dosage and administration details:

Subjects enrolled in this study received treatment with single-agent IMCnyeso dosed weekly on Days 1, 8, 15, and 22 of each 4-week cycle. There were 4 fixed-dose, dose escalation cohorts: 3, 10, 30, and 100 mcg. There were 3 inpatient dose escalation cohorts: 30-100 mcg, 30-100-180 mcg, and 30-100-300 mcg.

<b>Arm title</b>	Phase 1: IMCnyeso 10 mcg
------------------	--------------------------

Arm description:

Single-agent IMCnyeso at 10 mcg dosed weekly intravenously on Days 1, 8, 15, and 22 of each 4-week cycle using a fixed-dose regimen

Arm type	Experimental
Investigational medicinal product name	IMCnyeso
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Solution for infusion
Routes of administration	Intravenous use

Dosage and administration details:

Subjects enrolled in this study received treatment with single-agent IMCnyeso dosed weekly on Days 1, 8, 15, and 22 of each 4-week cycle. There were 4 fixed-dose, dose escalation cohorts: 3, 10, 30, and 100 mcg. There were 3 inpatient dose escalation cohorts: 30-100 mcg, 30-100-180 mcg, and 30-100-300 mcg.

<b>Arm title</b>	Phase 1: IMCnyeso 30 mcg
------------------	--------------------------

**Arm description:**

Single-agent IMCnyeso at 30 mcg dosed weekly intravenously on Days 1, 8, 15, and 22 of each 4-week cycle using a fixed-dose regimen

Arm type	Experimental
Investigational medicinal product name	IMCnyeso
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Solution for infusion
Routes of administration	Intravenous use

**Dosage and administration details:**

Subjects enrolled in this study received treatment with single-agent IMCnyeso dosed weekly on Days 1, 8, 15, and 22 of each 4-week cycle. There were 4 fixed-dose, dose escalation cohorts: 3, 10, 30, and 100 mcg. There were 3 inpatient dose escalation cohorts: 30-100 mcg, 30-100-180 mcg, and 30-100-300 mcg.

## Adverse events

### Adverse events information

Timeframe for reporting adverse events:

Up to 35 months

Adverse event reporting additional description:

The Safety Analysis Set includes all subjects who received at least 1 full or partial dose of study drug in Phase 1; the Phase 2 arm was not started and no data were collected. One subject was sequentially enrolled in two cohorts (10 mcg and 30-100 mcg). Events in either cohort are counted once in the total cohort.

Assessment type	Systematic

## More information

### Substantial protocol amendments (globally)

Were there any global substantial amendments to the protocol? Yes

Date	Amendment
15 January 2018	--Additional DLT criterion added --Updated inclusion criteria #10 to require that during Phase II patients with NSCLC harboring anaplastic lymphoma kinase rearrangements or EGFR mutations have had prior treatment with Health --Authority-approved targeted therapies --Duration of sample storage was added --Additional emergency contact added on cover page --Corrected typographical errors and inconsistencies and inserted minor clarifications throughout to improve the readability and content presentation
12 June 2019	--Description of potential risks was revised to incorporate emerging data from related molecules including the ImmTAC IMCgp100. The CRS section was updated to include frequencies of relevant AEs. -----Potential risks of hepatic and pulmonary events were added. --Added provision to allow enrollment in expansion cohorts to be increased from n=9 to n=24 (previously fixed at n=10) --Response was no longer to be evaluated per modified irRECIST. Treatment discontinuation was required when unequivocal disease progression was confirmed, aligned with current standards. Inpatient dose-escalation approaches were modified based on beneficial data in other CD3 bispecifics to allow the SST to initiate a 1-step or 2-step IPE regimen and/or allow pre-medication. A longer DLT evaluation period and adjusted Cycle 1 schedule were added for patients who were receiving IPE. --The first 3 patients at each dose level were to be hospitalized for 2 nights after the first dose of IMCnyeso. --DLT criteria were revised --Allowed/prohibited concomitant medications were edited --Toxicity management guidelines were updated to align with protocols for other ImmTAC molecules. --The schedule of assessment tables were reformatted for ease of use with a few clarifications --Safety follow-up was changed to 30 days, based on the <24-hour half-life of ImmTAC.

24 February 2020	<p>--To reduce the risk to patients from acute mechanism-related toxicities by moving to IPE regimens, the dose-escalation rules were updated, so that at any escalation step, a new permitted dose level based on the BLRM could be assessed using the same regimen as the prior cohort or using a regimen with additional steps. Furthermore, because ImmTAC-associated toxicities are generally acute, a 28-day DLT period was be used for all schedules.</p> <p>--Based on the observation that all signs/symptoms of CRS, to date, had occurred rapidly (within a few hours) following administration of IMCnyeso, the SST could decide to reduce the minimum required post-end of infusion monitoring time to no less than 8 hours on C1D1, C1D8, and/or C1D15 during the Phase II portion of the study. Consistent with prior versions of the protocol, hospitalization would be extended if clinically indicated for any given patient.</p> <p>--Eligibility criteria were updated based on investigator feedback as follows:</p> <ol style="list-style-type: none"> <li>Patients with a clinically stable, asymptomatic Grade 2 endocrine disorder due to prior anti-cancer therapy (previously restricted to hypothyroidism) were permitted to be enrolled in the study.</li> <li>The minimum allowed creatinine clearance (calculated using Cockcroft-Gault formula or measured) was reduced from 50 mL/min to 40 mL/min.</li> <li>The washout period for oral antibiotics was reduced from 14 days to 7 days prior to the first dose of study drug (note: no change was made to the washout period for IV antibiotics).</li> </ol> <p>4. Instructions for allowed and prohibited concomitant medications were edited to include guidance regarding vaccine use.</p> <p>--If dose escalation proceeded to a dose of &gt;150 mcg according to BLRM output and treatment at this dose level is well tolerated, additional BLRM simulations were to be performed to predict rates of toxicity for higher dose levels.</p>
------------------	---

Notes:

## Interruptions (globally)

Were there any global interruptions to the trial? Yes

Date	Interruption	Restart date
10 May 2021	Following portfolio review, the study was terminated early (prior to initiation of Phase 2) by the Sponsor as a strategic decision (not based on any safety signal).	-

Notes:

## Limitations and caveats

None reported
