

Clinical trial results:

An open label, randomised, parallel group clinical study to evaluate the effect of the Connected Inhaler System (CIS) on adherence to Relvar/Breo ELLIPTA therapy, in asthmatic subjects with poor control

Summary

EudraCT number	2017-002266-45
Trial protocol	GB DE NL ES FR IT
Global end of trial date	24 January 2019

Notes:

Paediatric regulatory details

Is trial part of an agreed paediatric investigation plan (PIP)	No
Does article 45 of REGULATION (EC) No 1901/2006 apply to this trial?	No
Does article 46 of REGULATION (EC) No 1901/2006 apply to this trial?	No

Notes:

Results analysis stage

Analysis stage	Final
Date of interim/final analysis	08 May 2019
Is this the analysis of the primary completion data?	No
Global end of trial reached?	Yes
Global end of trial date	24 January 2019
Was the trial ended prematurely?	No

Notes:

General information about the trial

Main objective of the trial:

To compare the effect of 6 months use of the CIS on adherence to ELLIPTA maintenance therapy when both the subject and the HCP are supplied with data from the maintenance sensor versus no data supplied to the subject and HCP (Arm 1 vs Arm 5)

Protection of trial subjects:

Not applicable

Background therapy: -

Evidence for comparator: -

Actual start date of recruitment	31 January 2018
Long term follow-up planned	No
Independent data monitoring committee (IDMC) involvement?	No

Notes:

Population of trial subjects

Subjects enrolled per country

Country: Number of subjects enrolled	Canada: 127
Country: Number of subjects enrolled	Germany: 63
Country: Number of subjects enrolled	Italy: 31
Country: Number of subjects enrolled	Netherlands: 34
Country: Number of subjects enrolled	Spain: 45
Country: Number of subjects enrolled	United Kingdom: 25
Country: Number of subjects enrolled	United States: 112
Worldwide total number of subjects	437
EEA total number of subjects	198

Notes:

Subjects enrolled per age group

In utero	0
Preterm newborn - gestational age < 37 wk	0
Newborns (0-27 days)	0
Infants and toddlers (28 days-23 months)	0
Children (2-11 years)	0

Adolescents (12-17 years)	0
Adults (18-64 years)	380
From 65 to 84 years	56
85 years and over	1

Subject disposition

Recruitment

Recruitment details:

This was an open-label, randomized, multi-center, parallel group study to evaluate the effect of the connected inhaler system (CIS) on adherence to Relvar/Breo ELLIPTA therapy, in asthmatic participants (Par) with poor control.

Pre-assignment

Screening details:

A total of 528 participants were screened and 437 participants were enrolled and randomized in this study.

Period 1

Period 1 title	Overall Study (overall period)
Is this the baseline period?	Yes
Allocation method	Randomised - controlled
Blinding used	Not blinded

Arms

Are arms mutually exclusive?	Yes
Arm title	Cohort 1: Data on maintenance use supplied to Par and HCP

Arm description:

Eligible participants received Relvar/Breo maintenance therapy at doses of 100/25 microgram (mcg) or 200/25 mcg per actuation administered via ELLIPTA dry powder inhaler (DPI), one inhalation once daily. Participants also received salbutamol rescue medication at dose of 100 mcg per actuation administered via metered dose inhaler (MDI), as and when required. Sensors were attached to both the inhalers to electronically record actuation data. Information from sensor attached to Relvar/Breo ELLIPTA was fed back to the participant via an application on smart phone and to the participant's healthcare professional (HCP) via an online dashboard.

Arm type	Experimental
Investigational medicinal product name	Relvar/Breo ELLIPTA
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Inhalation powder
Routes of administration	Inhalation use

Dosage and administration details:

Relvar/Breo maintenance therapy was available at doses of 100/25 microgram (mcg) and 200/25 mcg administered via ELLIPTA dry powder inhaler (DPI), one inhalation once daily

Investigational medicinal product name	Salbutamol MDI
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Inhalation powder
Routes of administration	Inhalation use

Dosage and administration details:

Salbutamol rescue medication was available at dose of 100 mcg administered via metered dose inhaler (MDI), as and when required

Arm title	Cohort 2: Data on maintenance use supplied to Par
------------------	---------------------------------------------------

Arm description:

Eligible participants received Relvar/Breo maintenance therapy at doses of 100/25 mcg or 200/25 mcg per actuation administered via ELLIPTA DPI, one inhalation once daily. Participants also received salbutamol rescue medication at dose of 100 mcg per actuation administered via MDI, as and when required. Sensors were attached to both the inhalers to electronically record actuation data. Information from sensor attached to Relvar/Breo ELLIPTA was fed back to the participant only via an application on smart phone.

Reporting group description: Eligible participants received Relvar/Breo maintenance therapy at doses of 100/25 mcg or 200/25 mcg per actuation administered via ELLIPTA DPI, one inhalation once daily. Participants also received salbutamol rescue medication at dose of 100 mcg per actuation administered via MDI, as and when required. Sensors were attached to both the inhalers to electronically record actuation data. Participants were provided with a home hub through which their data was uploaded during the study but the participants and their HCP were not able to view the data.	

Primary: Percentage of ELLIPTA doses taken (daily adherence) between Month 4 and Month 6 as determined by the maintenance sensor for arms; ("cohort 1: data on maintenance use supplied to participant and HCP" and "Cohort 5: no data supplied to participant or HCP")

End point title	Percentage of ELLIPTA doses taken (daily adherence) between Month 4 and Month 6 as determined by the maintenance sensor for arms; ("cohort 1: data on maintenance use supplied to participant and HCP" and "Cohort 5: no data supplied to participant or HCP") ^[1]
-----------------	-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------

End point description:

Daily adherence is defined as the participant taking one dose of Relvar/Breo ELLIPTA, within a 24-hour period, starting at 12.00 anti-meridiem (a.m.) each day of the treatment period. The percentage of ELLIPTA doses taken were determined by the clip-on sensor attached to ELLIPTA, which records the time

and date when the ELLIPTA cover was opened and closed. Least Square mean percentage of ELLIPTA doses taken was determined by the maintenance sensor daily adherence over the last three months of the study period (between months 4 to 6). The daily adherence to ELLIPTA maintenance therapy when both the participant and the HCP were supplied with data from the maintenance sensor (Cohort 1) versus no data supplied to the participant or HCP (Cohort 5) is summarized. Intent-to-Treat (ITT) Population comprised of all randomized participants, excluding those who were randomized in error. Only those participants with adherence data observed/imputed at the specified time points were analyzed.

End point type	Primary
----------------	---------

End point timeframe:

Month 4 to Month 6

Notes:

[1] - The end point is not reporting statistics for all the arms in the baseline period. It is expected all the baseline period arms will be reported on when providing values for an end point on the baseline period. Justification: This endpoint is only reporting on a subset of the arms that are contained in the Baseline period.

Notes:

[21] - p-value was calculated using ANCOVA.

Secondary: Percentage of ELLIPTA doses taken (daily adherence) between Month 1 and Month 6 as determined by the maintenance sensor

End point title	Percentage of ELLIPTA doses taken (daily adherence) between Month 1 and Month 6 as determined by the maintenance sensor
-----------------	-------------------------------------------------------------------------------------------------------------------------

End point description:

Daily adherence is defined as the participant taking one dose of Relvar/Breo ELLIPTA, within a 24-hour period, starting at 12.00 a.m. each day of the treatment period. Least Square mean percentage of ELLIPTA doses taken (daily adherence) between Months 1 and 6 was determined by the maintenance sensor daily adherence. The effect on daily adherence to maintenance therapy when maintenance data was supplied to both the participant and the HCP (Cohort 1), maintenance data was only supplied to participants (Cohort 2), rescue and maintenance data were supplied to participant and HCP (Cohort 3), and rescue and maintenance data only supplied to participant (Cohort 4) versus no data supplied to the participant or HCP (Cohort 5) is summarized. Only those participants with adherence data observed/imputed at the specified time points were analyzed.

Secondary: Change from Baseline in asthma control test (ACT) total score

End point title	Change from Baseline in asthma control test (ACT) total score
-----------------	---------------------------------------------------------------

End point description:

The ACT is a validated self-completed questionnaire utilizing 5 questions to assess asthma control on a 5-point categorical scale ranging from 1 (not controlled at all) to 5 (completely controlled). Total score is calculated as the sum of the scores from the 5 questions and can range from 5 to 25, with higher scores indicating better control. An ACT total score of 5 to 19 suggests that the participant's asthma is unlikely to be well controlled, whilst a score of 20 to 25 suggests that the participant's asthma is likely to be well controlled. Baseline value was the latest assessment prior to randomization (Day 1, pre-dose). Change from Baseline was calculated as post-dose visit value minus the Baseline value. Only those participants with data available at the specified data points were analyzed.

[71] - p-value was calculated using logistic regression

Secondary: Percentage of participants who have either an ACT total score of ≥ 20 and/or an increase from Baseline ≥ 3 in ACT total score at Month 6

End point title	Percentage of participants who have either an ACT total score of ≥ 20 and/or an increase from Baseline ≥ 3 in ACT total score at Month 6
-----------------	----------------------------------------------------------------------------------------------------------------------------------------------------

End point description:

The ACT is a validated self-completed questionnaire utilizing 5 questions to assess asthma control on a 5-point categorical scale ranging from 1 (not controlled at all) to 5 (completely controlled). Total score is calculated as the sum of the scores from the 5 questions and can range from 5 to 25, with higher scores indicating better control. Baseline value was the latest assessment prior to randomization (Day 1, pre-dose). Percentage of participants who had either an ACT total score of ≥ 20 and/or an increase from Baseline ≥ 3 in ACT total score at Month 6 is presented.

Adverse events

Adverse events information

Timeframe for reporting adverse events:

Serious adverse events (SAEs) and non-serious AEs were collected from the start of study treatment up to 6 months

Adverse event reporting additional description:

SAEs and non-serious AEs were reported for the ITT Population which comprised of all randomized participants, excluding those who were randomized in error.

Assessment type	Systematic

Reporting groups

Reporting group title	Cohort 1: Data on maintenance use supplied to Par and HCP
-----------------------	-----------------------------------------------------------

Reporting group description:

Eligible participants received Relvar/Breo maintenance therapy at doses of 100/25 microgram (mcg) or 200/25 mcg per actuation administered via ELLIPTA dry powder inhaler (DPI), one inhalation once daily. Participants also received salbutamol rescue medication at dose of 100 mcg per actuation administered via metered dose inhaler (MDI), as and when required. Sensors were attached to both the inhalers to electronically record actuation data. Information from sensor attached to Relvar/Breo ELLIPTA was fed back to the participant via an application on smart phone and to the participant's healthcare professional (HCP) via an online dashboard.

Reporting group title	Cohort 2: Data on maintenance use supplied to Par
-----------------------	---------------------------------------------------

Reporting group description:

Eligible participants received Relvar/Breo maintenance therapy at doses of 100/25 mcg or 200/25 mcg per actuation administered via ELLIPTA DPI, one inhalation once daily. Participants also received salbutamol rescue medication at dose of 100 mcg per actuation administered via MDI, as and when required. Sensors were attached to both the inhalers to electronically record actuation data. Information from sensor attached to Relvar/Breo ELLIPTA was fed back to the participant only via an application on smart phone.

Reporting group title	Cohort 3: Data on maintenance and rescue use to Par and HCP
-----------------------	-------------------------------------------------------------

Reporting group description:

Eligible participants received Relvar/Breo maintenance therapy at doses of 100/25 mcg or 200/25 mcg per actuation administered via ELLIPTA DPI, one inhalation once daily. Participants also received salbutamol rescue medication at dose of 100 mcg per actuation administered via MDI, as and when required. Sensors were attached to both the inhalers to electronically record actuation data. Information from sensors attached to Relvar/Breo ELLIPTA and salbutamol MDI was fed back to the participant via an application on smart phone and to HCP via an online dashboard.

Reporting group title	Cohort 4: Data on maintenance and rescue use supplied to Par
-----------------------	--------------------------------------------------------------

Reporting group description:

Eligible participants received Relvar/Breo maintenance therapy at doses of 100/25 mcg or 200/25 mcg per actuation administered via ELLIPTA DPI, one inhalation once daily. Participants also received salbutamol rescue medication at dose of 100 mcg per actuation administered via MDI, as and when required. Sensors were attached to both the inhalers to electronically record actuation data. Information from sensors attached to Relvar/Breo ELLIPTA and salbutamol MDI was fed back to the participant via an application on smart phone.

Reporting group title	Cohort 5: No data supplied to Par or HCP
-----------------------	------------------------------------------

Reporting group description:

Eligible participants received Relvar/Breo maintenance therapy at doses of 100/25 mcg or 200/25 mcg per actuation administered via ELLIPTA DPI, one inhalation once daily. Participants also received salbutamol rescue medication at dose of 100 mcg per actuation administered via MDI, as and when required. Sensors were attached to both the inhalers to electronically record actuation data. Participants were provided with a home hub through which their data was uploaded during the study but the participants and their HCP were not able to view the data.

More information

Substantial protocol amendments (globally)

Were there any global substantial amendments to the protocol? Yes

Date	Amendment
10 September 2018	Amendment 01: Sections: synopsis, overall design, number of participants, scientific rationale for study design and method of treatment assignment were modified - sample size re-estimation and interim analysis were deleted. Updated schedule of activities-requirement to collect protocol defined safety events from start of run-in and once a participant has begun treatment with Relvar/Breo added to table and notes. Updated the section: benefit/risk assessment to remove potential risks to align with the latest risk management plan (RMP). Updated objectives and endpoints to delete prescriptions filled from healthcare utilization endpoints, to add asthma control test (ACT) composite endpoint, correction to asthma symptom utility index (ASUI) endpoint and correction to beliefs in medicine questionnaire (BMQ) endpoint. Section: overall design modified to clarify early withdrawal. Text amended in concomitant therapy, discontinuation criteria, BMQ, exit interviews, asthma exacerbations, biomarkers and prescription record for asthma maintenance medication.

Notes:

Interruptions (globally)

Were there any global interruptions to the trial? No

Limitations and caveats

None reported
