

Clinical trial results:

A PHASE 3, MULTICENTER, RANDOMIZED, DOUBLE-BLIND, PLACEBO-CONTROLLED, ACTIVE REFERENCE (ADALIMUMAB) STUDY EVALUATING THE EFFICACY AND SAFETY OF BIMEKIZUMAB IN THE TREATMENT OF SUBJECTS WITH ACTIVE PSORIATIC ARTHRITIS

Summary

EudraCT number	2017-002322-20
Trial protocol	DE GB BE FR HU ES CZ IT
Global end of trial date	11 July 2022

Results information

Result version number	v1
This version publication date	23 July 2023
First version publication date	23 July 2023

Notes:

Paediatric regulatory details

Is trial part of an agreed paediatric investigation plan (PIP)	No
Does article 45 of REGULATION (EC) No 1901/2006 apply to this trial?	No
Does article 46 of REGULATION (EC) No 1901/2006 apply to this trial?	No

Notes:

Results analysis stage

Analysis stage	Final
Date of interim/final analysis	29 July 2022
Is this the analysis of the primary completion data?	No
Global end of trial reached?	Yes
Global end of trial date	11 July 2022
Was the trial ended prematurely?	No

Notes:

General information about the trial

Main objective of the trial:

Demonstrate the clinical efficacy of bimekizumab administered subcutaneously (sc) compared with placebo in the treatment of subjects with active Psoriatic Arthritis (PsA), as assessed by the American College of Rheumatology 50% Improvement (ACR50) response.

Protection of trial subjects:

Patients were closely monitored and were expected to be treated for any worsening as per investigator judgement. Moreover, rescue medication could be added if patient was not having benefit of therapy, as per investigator discretion.

Background therapy:

No background therapy.

Evidence for comparator:

Adalimumab

Actual start date of recruitment	03 April 2019
Long term follow-up planned	No
Independent data monitoring committee (IDMC) involvement?	Yes

Notes:

Population of trial subjects

Subjects enrolled per country

Country: Number of subjects enrolled	Australia: 65
Country: Number of subjects enrolled	Belgium: 6
Country: Number of subjects enrolled	Canada: 11
Country: Number of subjects enrolled	Czechia: 115
Country: Number of subjects enrolled	France: 3
Country: Number of subjects enrolled	Germany: 76
Country: Number of subjects enrolled	Hungary: 30
Country: Number of subjects enrolled	Italy: 5
Country: Number of subjects enrolled	Japan: 23
Country: Number of subjects enrolled	Poland: 276
Country: Number of subjects enrolled	Russian Federation: 113
Country: Number of subjects enrolled	Spain: 35
Country: Number of subjects enrolled	United Kingdom: 2
Country: Number of subjects enrolled	United States: 92
Worldwide total number of subjects	852
EEA total number of subjects	546

Notes:

Subjects enrolled per age group	
In utero	0
Preterm newborn - gestational age < 37 wk	0
Newborns (0-27 days)	0
Infants and toddlers (28 days-23 months)	0
Children (2-11 years)	0
Adolescents (12-17 years)	0
Adults (18-64 years)	763
From 65 to 84 years	89
85 years and over	0

Subject disposition

Recruitment

Recruitment details:

The study started to enroll participants in April 2019 and concluded in July 2022.

Pre-assignment

Screening details:

The Participant Flow refers to the Randomized Set (RS) which consists of enrolled participants that have been randomized and Active Treatment-Blind Set (ATS) which consists of all participants who received at least 1 dose of active treatment (Bimekizumab [BKZ] or Adalimumab [ADA]) during the Active Treatment-Blind Period (ATP) (Week 16 and after).

Period 1

Period 1 title	Double-Blind Treatment Period: 16 Weeks
Is this the baseline period?	Yes
Allocation method	Randomised - controlled
Blinding used	Double blind
Roles blinded	Investigator, Assessor, Subject

Arms

Are arms mutually exclusive?	Yes
Arm title	Placebo

Arm description:

Participants received placebo during the 16-weeks Double-Blind Treatment Period (DBP).

Arm type	Placebo
Investigational medicinal product name	Placebo
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Solution for injection in pre-filled syringe
Routes of administration	Subcutaneous use

Dosage and administration details:

Participants received placebo Q4W at prespecified time points.

Arm title	BKZ 160 mg Q4W
------------------	----------------

Arm description:

Participants received BKZ 160 milligrams (mg) subcutaneous (SC) every 4 weeks (Q4W) during the 16-weeks DBP.

Arm type	Experimental
Investigational medicinal product name	Bimekizumab
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Solution for injection in pre-filled syringe
Routes of administration	Subcutaneous use

Dosage and administration details:

Participants received BKZ 160 mg Q4W at prespecified time points.

Arm title	ADA 40 mg Q2W
------------------	---------------

Arm description:

Participants received ADA 40 mg SC every 2 weeks (Q2W) during the 16-weeks DBP.

Arm type	Active comparator
----------	-------------------

Investigational medicinal product name	Adalimumab
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Solution for injection in pre-filled syringe
Routes of administration	Subcutaneous use

Dosage and administration details:

Participants received ADA 40 mg SC Q2W at prespecified time points.

Number of subjects in period 1	Placebo	BKZ 160 mg Q4W	ADA 40 mg Q2W
Started	281	431	140
Enthesitis: PA0010/11 pooled population	106 ^[1]	249 ^[2]	0 ^[3]
Dactylitis: PA0010/11 pooled population	47 ^[4]	90 ^[5]	0 ^[6]
Completed	271	415	137
Not completed	10	16	3
Consent withdrawn by subject	4	6	1
PHQ-9 Score elevated	-	1	-
Adverse event, non-fatal	2	8	2
Site terminated	-	1	-
Lost to follow-up	2	-	-
Lack of efficacy	2	-	-

Notes:

[1] - The number of subjects at this milestone seems inconsistent with the number of subjects in the arm. It is expected that the number of subjects will be greater than, or equal to the number that completed, minus those who left.

Justification: This milestone is created for data presentation for clarity of dactylitis-free state, planned for the pooled PA0010 (NCT03895203) and PA0011 (NCT03896581) population.

[2] - The number of subjects at this milestone seems inconsistent with the number of subjects in the arm. It is expected that the number of subjects will be greater than, or equal to the number that completed, minus those who left.

Justification: This milestone is created for data presentation for clarity of enthesitis-free state, planned for the pooled PA0010 (NCT03895203) and PA0011 (NCT03896581) population.

[3] - The number of subjects at this milestone seems inconsistent with the number of subjects in the arm. It is expected that the number of subjects will be greater than, or equal to the number that completed, minus those who left.

Justification: This milestone is created for data presentation for clarity of dactylitis-free state, planned for the pooled PA0010 (NCT03895203) and PA0011 (NCT03896581) population.

[4] - The number of subjects at this milestone seems inconsistent with the number of subjects in the arm. It is expected that the number of subjects will be greater than, or equal to the number that completed, minus those who left.

Justification: This milestone is created for data presentation for clarity of enthesitis-free state, planned for the pooled PA0010 (NCT03895203) and PA0011 (NCT03896581) population.

[5] - The number of subjects at this milestone seems inconsistent with the number of subjects in the arm. It is expected that the number of subjects will be greater than, or equal to the number that completed, minus those who left.

Justification: This milestone is created for data presentation for clarity of dactylitis-free state, planned for the pooled PA0010 (NCT03895203) and PA0011 (NCT03896581) population.

[6] - The number of subjects at this milestone seems inconsistent with the number of subjects in the arm. It is expected that the number of subjects will be greater than, or equal to the number that completed, minus those who left.

Justification: This milestone is created for data presentation for clarity of enthesitis-free state, planned for the pooled PA0010 (NCT03895203) and PA0011 (NCT03896581) population.

Period 2

Period 2 title	Active Treatment-Blind Period: 36 Weeks
Is this the baseline period?	No
Allocation method	Randomised - controlled
Blinding used	Double blind
Roles blinded	Subject, Investigator, Assessor

Arms

Are arms mutually exclusive?	Yes
------------------------------	-----

Arm title	Placebo/BKZ 160 mg Q4W
------------------	------------------------

Arm description:

After the 16-weeks DBP, participants initially randomized to placebo received BKZ 160 mg SC Q4W during the 36-weeks ATP.

Arm type	Experimental
Investigational medicinal product name	Bimekizumab
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Solution for injection in pre-filled syringe
Routes of administration	Subcutaneous use

Dosage and administration details:

Participants received BKZ 160 mg Q4W at prespecified time points.

Arm title	BKZ 160 mg Q4W/BKZ 160 mg Q4W
------------------	-------------------------------

Arm description:

After the 16-weeks DBP, participants initially randomized to BKZ 160 mg continued to receive BKZ 160 mg SC Q4W during the 36-weeks ATP.

Arm type	Experimental
Investigational medicinal product name	Bimekizumab
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Solution for injection in pre-filled syringe
Routes of administration	Subcutaneous use

Dosage and administration details:

Participants received BKZ 160 mg Q4W at prespecified time points.

Arm title	ADA 40 mg Q2W/ADA 40 mg Q2W
------------------	-----------------------------

Arm description:

After the 16-weeks DBP, participants initially randomized to ADA 40 mg continued to receive ADA 40 mg SC Q2W during the 36-weeks ATP.

Arm type	Active comparator
Investigational medicinal product name	Adalimumab
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Suspension for injection in pre-filled syringe
Routes of administration	Subcutaneous use

Dosage and administration details:

Participants received ADA 40 mg SC Q2W at prespecified time points.

Number of subjects in period 2 ^[7]	Placebo/BKZ 160 mg Q4W	BKZ 160 mg Q4W/BKZ 160 mg Q4W	ADA 40 mg Q2W/ADA 40 mg Q2W
Started	271	414	136
Completed	257	387	125
Not completed	14	27	11
Adverse event, serious fatal	1	-	-
Consent withdrawn by subject	4	9	2
Adverse event, non-fatal	5	9	4
Withdrawal due to Subject Decision	1	-	-
Subject Moving Out of Area	-	-	1
COVID-19 Pandemic Circumstances	1	-	-
Lost to follow-up	1	3	-
Lack of efficacy	1	6	4

Notes:

[7] - The number of subjects starting the period is not consistent with the number completing the preceding period. It is expected the number of subjects starting the subsequent period will be the same as the number completing the preceding period.

Justification: Eligible participants who continued to receive active treatment at Week 16 (participants not on treatment at Week 16 but continued in the study were excluded) were started in ATP.

Secondary: Change from Baseline in Health Assessment Questionnaire-Disability Index (HAQ-DI) at Week 16

End point title	Change from Baseline in Health Assessment Questionnaire-Disability Index (HAQ-DI) at Week 16 ^[1]
-----------------	---

End point description:

HAQ-DI contains 20 items that measured degree of difficulty experienced in following 8 categories of daily living activities: dressing and grooming (2 items), arising (2 items), eating (3 items), walking (2 items), hygiene (3 items), reach (2 items), grip (3 items), and common daily activities (3 items). Each question was scored 0-3 (0 = without any difficulty, 1 = with some difficulty, 2 = with much difficulty, and 3 = unable to do). The overall HAQ-DI total score was calculated by dividing the sum of the highest category scores (0 to 24) by the number of categories with at least 1 question answered. Total score ranges from 0 (no difficulty) to 3 (maximum difficulty). A lower HAQ-DI score indicated an improvement in function. A negative value in change from baseline indicated an improvement. RS consisted of all enrolled participants who had been randomized. Missing data and non-missing data after treatment discontinuation were imputed using reference based multiple imputation.

End point type	Secondary

Secondary: Percentage of Participants With a Psoriasis Area Severity Index (PASI) 90 response at Week 4 in the subgroup of participants with psoriasis (PSO) involving at least 3% body surface area (BSA) at Baseline

End point title	Percentage of Participants With a Psoriasis Area Severity Index (PASI) 90 response at Week 4 in the subgroup of participants with psoriasis (PSO) involving at least 3% body surface area (BSA) at Baseline
-----------------	---

End point description:

The PASI90 response assessments are based on at least 90% improvement in PASI score from Baseline. Body divided into 4 areas: head, arms, trunk to groin, and legs to top of buttocks. Assignment of average score for redness, thickness, and scaling for each of 4 body areas with score of 0 (clear) to 4 (very marked). Determining percentage of skin covered with PSO for each of body areas and converting to 0 to 6 scale. Final PASI = average redness, thickness, and scaliness of psoriatic skin lesions, multiplied by involved psoriasis area score of respective section, and weighted by percentage of person's affected skin for respective section. Minimum possible PASI score is 0 = no disease, maximum score is 72 = maximal disease. Subset of RS with psoriasis involving at least 3% BSA at Baseline. Those who have missing PASI90 data at Week 4 or who discontinued study treatment before Week 4 regardless of whether they had data or not are considered as non-responders.

End point title	Change from Baseline in the Short Form 36-item Health Survey (SF-36) Physical Component Summary (PCS) at Week 16 ^[2]
-----------------	---

End point description:

SF-36:36-item generic health-related Quality of Life instrument uses recall period of 4 weeks. Questionnaire has 36 questions composing scale represent 8 domains:physical functioning;role physical;bodily pain;general health;vitality;social functioning;role emotional;mental health. Scores for 8 domains were combined into two summary scores: PCS and mental component summary (MCS) scores. Component summary scores and 8 domains have been computed raw/observed score to norm-based T-score metric (mean=50, standard deviation=10), raw score min=0(worst), max=100(best). Individual respondent's score outside T-score range of 45 to 55 was considered outside average range and when considering group-level data, score below 47 was considered indicative of impaired functioning within health domain or dimension. Positive value in change from Baseline indicated improvement. Analysis set RS. Missing and non-missing data after treatment discontinuation imputed using reference based multiple imputation.

Secondary: Percentage of Participants With an Enthesitis-free state in the Leeds Enthesitis Index (LEI) at Week 16 in the subgroup of participants with enthesitis at Baseline in the pooled population of PA0010 and PA0011

End point title	Percentage of Participants With an Enthesitis-free state in the Leeds Enthesitis Index (LEI) at Week 16 in the subgroup of participants with enthesitis at Baseline in the pooled population of PA0010 and PA0011 ^[3]
-----------------	--

End point description:

Presence of enthesitis was assessed in the subgroup of participants with enthesitis by palpation on the lateral epicondyles of the humerus (elbows), medial femoral epicondyles (knees), and Achilles tendons (heels) bilaterally and scored as 0 (no tenderness) and 1 (tenderness) at Baseline. The LEI consists of 6 items, 3 for the right part and 3 for the left part of the body. LEI is derived as the sum of the enthesitis score over the 6 sites mentioned above. The total score ranges from 0 to 6, higher scores indicates greater degree of enthesitis. As pre-specified in the SAP, the subgroup of participants with enthesitis at Baseline in the pooled population of PA0010 and PA0011 (NCT03896581) were included for the analysis of outcome measure. Participants who have missing LEI at Week 16 or who discontinued study treatment before Week 16 regardless of whether they had data or not are considered as non achieving enthesitis free-state.

Baseline, Week 16

Notes:

[3] - The end point is not reporting statistics for all the arms in the baseline period. It is expected all the baseline period arms will be reported on when providing values for an end point on the baseline period. Justification: Descriptive statistics for ADA 40 mg reference arm for few endpoints was not calculated and reported since reference based imputation analysis method was used with Placebo as reference. Inferential Statistics for ADA 40 mg reference arm was not calculated and reported as no formal comparison was planned.

Secondary: Change from Baseline in Van der Heijde modified Total Sharp Score (vdHmTSS) in participants with elevated hs-CRP and/or at least 1 bone erosion at Baseline at Week 16

End point title	Change from Baseline in Van der Heijde modified Total Sharp Score (vdHmTSS) in participants with elevated hs-CRP and/or at least 1 bone erosion at Baseline at Week 16 ^[4]
-----------------	---

End point description:

The degree of joint damage was assessed using the vdHmTSS by quantifying the extent of bone erosions and joint space narrowing for 64 and 52 joints, respectively. The vdHmTSS ranges from 0 to 528, with higher scores representing greater damage. The Radiographic Set (RAS) consisted of all participants in the RS who received at least 1 dose of investigational medicinal product (IMP) and have a valid radiographic image of the hands and feet (with an assessment performed by at least the 2 reviewers) at Screening. Missing data and non-missing data preceded by a study treatment discontinuation were imputed using reference based multiple imputation. Here, number of participants analyzed included RAS set with elevated hs-CRP and/or with at least one bone erosion at Baseline.

Secondary: Percentage of Participants With a Dactylitis-free state based on the

Leeds Dactylitis Index (LDI) at Week 16 in the subgroup of participants with dactylitis at Baseline in the pooled population of PA0010 and PA0011

End point title	Percentage of Participants With a Dactylitis-free state based on the Leeds Dactylitis Index (LDI) at Week 16 in the subgroup of participants with dactylitis at Baseline in the pooled population of PA0010 and PA0011 ^[5]
-----------------	---

End point description:

LDI: measures dactylitis using circumference of involved digits and control digits and tenderness of involved digits. Digits affected by dactylitis are defined those with 10% difference in ratio of circumference of affected digit to contralateral digit. Control digit is either contralateral digit (digit on opposite hand or foot). Ratio of circumference between affected digit and control digit is multiplied by tenderness score for affected digit. Results from each involved digit are summed to provide final LDI score. Higher LDI indicates worse dactylitis. Tenderness score (0 = no tenderness, 1 = tender). As pre-specified in the SAP, subgroup of participants with dactylitis at Baseline in pooled population of PA0010 and PA0011 (NCT03896581) were included for analysis of outcome measure. Non achieving dactylitis free-state: who have missing LDI at Week 16 or discontinued study before Week 16 regardless of whether they have data or not.

End point title	Change from Baseline in Psoriatic Arthritis Impact of Disease-12 (PsAID-12) total score at Week 16
-----------------	--

End point description:

The PsAID-12 is a patient-reported outcome measure for assessing the impact of Psoriatic Arthritis (PsA) in 12 physical and psychological domains, including pain, fatigue, skin problems, work and/or leisure activities, functional capacity, discomfort, sleep disturbance, coping, anxiety/fear/uncertainty, embarrassment and/or shame, social participation, and depression. Each domain is assessed with a single question using a 0 to 10 numerical rating scale. Each domain score was multiplied by a weighting factor and the results were then summed to provide the total score. The total score ranged from 0 to 10, with higher scores indicating a worse status. A negative change from baseline indicates improvement. RS consisted of all enrolled participants who had been randomized. Missing data and non-missing data preceded by a study treatment discontinuation were imputed using reference based multiple imputation.

More information

Substantial protocol amendments (globally)

Were there any global substantial amendments to the protocol? Yes

Date	Amendment
10 January 2020	Protocol Amendment 1 (10 Jan 2020) was implemented to update the completed and ongoing studies information, clarify study procedures, update the description of the IMP, and to apply a minimum percentage for enrollment of study participants who had elevated hs-CRP and/or have at least 1 bone erosion at Screening.
22 February 2021	Protocol Amendment 2 (22 Feb 2021) was implemented to modify the secondary variables and fixed sequence testing procedure, update the statistical section, and make other procedural clarifications.

Notes:

Interruptions (globally)

Were there any global interruptions to the trial? No

Limitations and caveats

None reported
