

Clinical trial results:

A multicentre, randomised, open-label, parallel-group trial to study the safety and efficacy of a new therapeutic strategy (Trinomia®*) versus usual care on LDLc and blood pressure levels in patients with atherothrombotic cardiovascular disease: The APOLO trial.

Summary

EudraCT number	2017-002343-14
Trial protocol	IE ES PT
Global end of trial date	09 March 2021

Results analysis stage

Analysis stage	Final
Date of interim/final analysis	24 May 2022
Is this the analysis of the primary completion data?	No
Global end of trial reached?	Yes
Global end of trial date	09 March 2021
Was the trial ended prematurely?	No

Notes:

General information about the trial

Main objective of the trial:

The primary objective of this trial is to determine whether the treatment with a new therapeutic strategy (Trinomia®) is at least non-inferior to usual care in terms of low-density lipoprotein cholesterol (LDLc) and systolic blood pressure reductions in subjects with atherothrombotic cardiovascular disease after 6 months of treatment.

Protection of trial subjects:

This clinical trial was conducted in accordance with the protocol, the principles established in the current revised version of the Declaration of Helsinki (Fortaleza, Brazil; October 2013), the Harmonized Tripartite Guidelines for Good Clinical Practice and applicable regulatory requirements.

The study was not started until approval by the ethics committee and other pertinent authorities was obtained. By signing the protocol, the investigator agreed to adhere to the instructions and procedures described in the protocol and therefore to comply the principles of good clinical practice they entail. Any amendment changing the risk-benefit relationship for the patient was, after signature by the sponsor, submitted for evaluation by the ethics committees and the regulatory authorities for approval. The study investigators were also informed and gave their written approval for the amendment. Informed consent for participation in the study was freely granted before performing any study-specific procedure.

Background therapy: -

Evidence for comparator: -

Actual start date of recruitment	13 June 2018
Long term follow-up planned	Yes
Long term follow-up rationale	Safety
Long term follow-up duration	1 Months
Independent data monitoring committee (IDMC) involvement?	No

Notes:

Population of trial subjects

Subjects enrolled per country

Country: Number of subjects enrolled	Portugal: 192
Country: Number of subjects enrolled	Spain: 252
Country: Number of subjects enrolled	Ireland: 28
Country: Number of subjects enrolled	Ukraine: 83
Worldwide total number of subjects	555
EEA total number of subjects	472

Notes:

Subjects enrolled per age group	
In utero	0
Preterm newborn - gestational age < 37 wk	0
Newborns (0-27 days)	0
Infants and toddlers (28 days-23 months)	0
Children (2-11 years)	0
Adolescents (12-17 years)	0
Adults (18-64 years)	262
From 65 to 84 years	292
85 years and over	1

Subject disposition

Recruitment

Recruitment details:

Between June 2018 and March 2021, 555 patients were enrolled in this study. Eleven patients from the Hospital Universitario Virgen del Rocío, 52 from the Hospital Gregorio Marañón, and nine from the Hospital San Juan were excluded because of an inspection and audits. Of the remaining 483 patients, 37 were screening failures and 446 were randomized.

Pre-assignment

Screening details:

Subjects ≥ 18 with atherothrombotic cardiovascular disease and at least one of them: previous acute myocardial infarction, cardiac revascularization with coronary stent, coronary artery bypass grafting, diagnosis of stable angina, previous ischemic stroke or peripheral artery disease. Excluded for any contraindication to the cardiovascular polypill.

Period 1

Period 1 title	Overall trial (overall period)
Is this the baseline period?	Yes
Allocation method	Randomised - controlled
Blinding used	Not blinded

Arms

Are arms mutually exclusive?	Yes
Arm title	Trinomia group

Arm description:

Patients in the Trinomia group incorporated the cardiovascular polypill in their therapeutic strategy. Therefore, patients substituted the angiotensin converting enzyme (ACE) inhibitor/angiotensin II receptor blocker (ARB), statin and acetylsalicylic acid by the cardiovascular polypill. In addition, patients may have taken any other medication that they were taking before. Replacing the cardiovascular polypill should have been done on the basis that patients were stable and no changes in medication for LDLc and was planned. According to these premises, the doses of atorvastatin (20 or 40 mg) and ramipril (2,5 to 10 mg) were chosen according to the equivalent doses of ARBs/ACEIs and statins that he/she had been taken before entering the study.

Arm type	Experimental
Investigational medicinal product name	Cardiovascular polypill
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Capsule, soft
Routes of administration	Oral use

Dosage and administration details:

Each capsule contains 100 mg of acetylsalicylic acid, 20 mg or 40 mg of atorvastatin and 2.5 mg, 5 mg, or 10 mg of ramipril. Excipients with known effect: 73.61 mg of lactose monohydrate and 0.48 mg of soy lecithin.

Size 0 hard gelatine capsules with opaque pale pink-coloured cap and body (the cardiovascular polypill 100 mg/ 20 or 40 mg/ 10 mg), opaque pale pink-coloured cap and opaque pale grey-coloured body (the cardiovascular polypill 100 mg/ 20 or 40 mg/ 5 mg) or opaque pale grey-coloured cap and body (the cardiovascular polypill 100 mg/20 or 40 mg/ 2.5 mg), imprinted with "AAR 100/20/10", "AAR 100/40/10", "AAR 100/20/5", "AAR 100/40/5", "AAR 100/20/2.5", or "AAR 100/40/2.5". The capsules contain: 2 white or nearly white film-coated tablets engraved "AS" of 50 mg of acetylsalicylic acid; 2 greenish-brownish film-coated tablets engraved "AT" of 10 or 20 mg of atorvastatin; 1 pale yellow film-coated tablet engraved "R1", "R5" or "R2" of 10, 5 or 2.5 mg of ramipril, respectively.

Arm title	Control group
-----------	---------------

Arm description:

Patients assigned to group B continued receiving the usual treatment they were already receiving prior to inclusion in the study, maintaining the time of administration of the medication. When necessary, the patient collected the prescribed treatment at the local pharmacy as per routine clinical practice, according to the characteristics of each country. Patients were instructed not to modify the treatment regimen they had been following prior to their inclusion in the study. Likewise, the patient was

instructed about the need to maintain the same diet and physical activity that he/she had been doing before entering the study.

Arm type	Active comparator
Investigational medicinal product name	Control treatment
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Capsule
Routes of administration	Oral use

Dosage and administration details:

The treatment for cardiovascular prevention considered as optimal by the investigator at patient's enrolment, including acetylsalicylic acid, lipid-lowering agents (statins) and renin-angiotensin-aldosterone system blockers. Pharmaceutical form used for clinical practice.

Number of subjects in period 1^[1]	Trinomia group	Control group
Started	218	226
Completed	187	201
Not completed	31	25
Consent withdrawn by subject	4	-
Other	5	3
Adverse events or toxicities	9	2
Concomitant disease	1	-
Lost to follow-up	4	8
Modification of study treatment	3	8
Protocol deviation	5	4

Notes:

[1] - The number of subjects reported to be in the baseline period are not the same as the worldwide number enrolled in the trial. It is expected that these numbers will be the same.

Justification: 72 patients were excluded because of inspections/audits and 37 for screen failure reasons. Additionally, 2 patients from Trinomia group didn't take medication and were also excluded.

Secondary: Total Score of treatment Satisfaction Questionnaire for medication (TSQM-9)

End point title	Total Score of treatment Satisfaction Questionnaire for medication (TSQM-9)
-----------------	---

End point description:

The questions of TSQM-9 refer to three dimensions: effectiveness (questions 1 to 3), convenience (questions 4 to 6) and global satisfaction (questions 7 to 9). In addition to the calculation of the total score for the nine individual questions of TSQM-9, a score can also be calculated for the three dimensions of effectiveness, convenience and global satisfaction. In this calculation also, the total score of the three dimensions can be between 0 and 100. A higher total score equates to greater satisfaction.

More information

Substantial protocol amendments (globally)

Were there any global substantial amendments to the protocol? Yes

Date	Amendment
17 July 2017	Initial submission in Spain. Request of additional information by INFARMED and the EC in Portugal; addition of new exclusion criteria and clarification of Baseline Visit procedures.
22 December 2017	Only for Spain and Ireland. An exclusion criterion is added, the recruitment period is modified, clarifications are added regarding concomitant medication and study treatment. Correction of mistakes.
12 April 2018	Exclusion criteria are added at the request of INFARMED (Portugal) and clarifications of the Baseline visit procedures. Also applied to Spain and Ireland.
15 June 2018	Inclusion of 12 new sites in Portugal.
04 October 2018	Notice to inform study participants on the protection of personal data in Portugal.
11 January 2019	Title adaptation, IMP renaming, rewording of study objectives and endpoints, changes in inclusion/exclusion criteria, addition of new equivalence to ramipril and atorvastatine (including the addition of ezetimibe 10 mg or atorvastatin 40 mg for patients taking atorvastatine 80 mg), update and correction of lab test parameters necessary for randomisation, update of statistical methods and non inferiority limit for LDL, changes in the assumptions for the sample size calculations and changes in sample size . Administrative changes.
22 February 2019	Include central laboratory in Ukraine.
28 May 2019	Only for Portugal. New version of the General PIS/ICF (version 2.4, dated 27 August 2019), the PIS/ICF for Pregnancy Follow-up (version 2.4, dated 27 August 2019) and Patient Card (version 1.1, dated 14 May 2019): inclusion of a new site.
01 October 2019	Inclusion of 3 new sites in Portugal.
20 December 2019	Inclusion of 4 new sites in Ireland.

Notes:

Interruptions (globally)

Were there any global interruptions to the trial? No

Limitations and caveats

None reported
