

## Clinical trial results:

**An open-label first-in-human phase 1/2a study to evaluate safety, feasibility and efficacy of multiple dosing with individualised VB10.NEO or VB10.NEO and bempegaldesleukin (NKTR-214) immunotherapy in patients with locally advanced or metastatic melanoma, NSCLC, clear renal cell carcinoma, urothelial cancer or squamous cell carcinoma of head and neck, who did not reach complete responses with current standard of care immune checkpoint blockade.**

Notes:

## General information about the trial

Main objective of the trial:

To assess the safety/tolerability of multiple doses of 3 mg VB10.NEO immunotherapy and of multiple doses of  
3 mg VB10.NEO immunotherapy in combination with 0.006 mg/kg bempegaldesleukin.

To determine the feasibility of VB10.NEO (overall process feasibility from biopsy, sequencing, neoepitope selection and vaccine manufacturing).

Protection of trial subjects:

The trial was conducted in accordance with the Declaration of Helsinki, adopted by the 18th World Medical Association (WMA) General Assembly, Helsinki, Finland, June 1964, and subsequent amendments and International Council for Harmonisation (ICH) Guideline for Good Clinical Practice E6 (R2) (European Medicines Agency (EMA)/Committee for Medicinal Products for Human Use CHMP)/ICH/135/1995), including archiving of essential documents and the EU Clinical Trial Directive (CTD)2001/20/EC.

## Subject disposition

### Recruitment

Recruitment details:

The study was conducted at 9 study centres in Germany.

### Pre-assignment

Screening details:

Participants were assigned to VB10.NEO treatment in 1 of 5 different arms depending on tumor type.

Arm 1: melanoma; Arm 2: non-small cell lung cancer; Arm 3: clear-cell renal carcinoma; Arm 4: urothelial cancer; Arm 5: squamous cell carcinoma of the head and neck. Arm 5 was further divided into 5A and 5B, where Arm 5B also received NKTR-214.

## More information

### Substantial protocol amendments (globally)

Were there any global substantial amendments to the protocol? Yes

Date	Amendment
09 May 2018	<p>The amendments in the protocol include the increase in the number of biopsies from 2 to 5 and the possibility of carrying out CT-guided biopsies, amongst others. The additional biopsies support the investigation of the mutagenic properties, the immunological activity and the clinical efficacy and make it possible to carry out the descriptive analyses outlined in the protocol.</p> <p>CT-guided biopsies replace a major surgical procedure, e.g., in the case of tumours located deep inside the body and make it possible to secure high-quality samples with sufficient tumour cell content. The investigator will decide at each visit which tumour lesions will be chosen for each patient and whether CT-guided biopsies are required.</p>
13 March 2019	<p>To account for poor clinical outcomes and short overall survival times for patients with squamous cell carcinoma of the head and neck (SCCHN), it was decided to improve the conditions of inclusion criteria of these patients to the trial. Inclusion Criteria were updated to state that SCCHN patient must be on CPI and removed the condition of "for at least 12 weeks".</p> <p>In collaboration with Nektar Therapeutics, a possible synergistic effect of VB10.NEO with bempegaldesleukin (NKTR-214) was tested in pre-clinical studies. Based on strong non-clinical data, it was decided to make NKTR-214 available to SCCHN patients in this clinical trial. As such, a new treatment arm (arm 5B) for SCCHN was created for these patients to investigate the combination of VB10.NEO with bempegaldesleukin in patients with SCCHN. To facilitate overall recruitment and increase the enrollment of SCCHN patients the number of study centers was increase from 3 to 4-8 centers. To increase the chances of patients consenting to follow-up biopsies, the total number of biopsies that can be taken per visit (all arms) has been reduced from 5 to 3. To analyse changes in the tumour microenvironment specifically related to the introduction of NKTR-214, new time points for collecting biopsies were included in arm 5B. Further, to allow inter-patient comparison, the biopsies were also included in arm 5A.</p>
15 May 2019	<p>The study protocol has been revised to include monthly checks on blood values in the 5B cohort, once treatment with bempegaldesleukin has begun.</p>
05 December 2019	<p>The decision to investigate any possible relationships between clinical responses and changes in the frequencies and repertoire of tumour-specific mutations identified in the cell-free DNA (cfDNA), with a particular focus on the neoepitopes targeted by VB10.NEO. Tumour heterogeneity may lead to different neoepitope expression patterns in different lesions in metastatic patients. Therefore, additional samples will be collected at screening and used for the neoepitope selection process to identify the optimal neoepitopes.</p> <p>Inclusion criteria for patients with melanoma have changed. This change is based on the decision to improve the conditions to enroll patients with melanoma in this trial. The waiting time from the start of CPI treatment (as standard of care) to the first dose of the IMP VB10.NEO will be shortened by dropping the requirement that CPI must have been given for at least 12 weeks at screening. Now, melanoma patients must be on CPI at screening.</p> <p>Standard of care (SoC) for the target population in the study have evolved since the initial submission of this study, and CPIs (anti PD-1 and anti PD-L1) are more commonly used as part of SoC in combination with other anti-cancer therapies. The patients in this trial will be on CPI treatment as part of their SoC. Combinations of anti-PD-1 and anti-PD-L1 with an anti-CTLA-4 agent or other anticancer therapies are allowed now if considered required at the investigator's discretion.</p>

## Interruptions (globally)

Were there any global interruptions to the trial? Yes

Date	Interruption	Restart date
12 February 2020	Investigators in the VB N-01 trial were informed about a temporary pause in the recruitment. The reason for the pause was constraints in the supply chain which lead to a backlog and an increased manufacturing time > 16 weeks.	03 March 2020
