

Clinical trial results:

A Phase Ib/Ila open-label, repeated dose, metabolic balance study of FE 203799 in patients with short bowel syndrome

Summary

EudraCT number	2017-002487-41
Trial protocol	DK
Global end of trial date	28 October 2019

Results information

Result version number	v1 (current)
This version publication date	03 January 2021
First version publication date	03 January 2021

Trial information

Trial identification

Sponsor protocol code	GLY-321-2017

Notes:

Paediatric regulatory details

Is trial part of an agreed paediatric investigation plan (PIP)	No
Does article 45 of REGULATION (EC) No 1901/2006 apply to this trial?	No
Does article 46 of REGULATION (EC) No 1901/2006 apply to this trial?	No

Notes:

Results analysis stage

Analysis stage	Final
Date of interim/final analysis	16 April 2020
Is this the analysis of the primary completion data?	Yes
Primary completion date	28 October 2019
Global end of trial reached?	Yes
Global end of trial date	28 October 2019
Was the trial ended prematurely?	No

Notes:

General information about the trial

Main objective of the trial:

To assess the safety and tolerability of FE 203799 in patients with short bowel syndrome (SBS)

Protection of trial subjects:

This trial was conducted in accordance with the ICH GCP guidelines, including the archiving of essential documents, and with the ethical principles that have their origin in the Declaration of Helsinki. Personal data included in the clinical trial report were collected and processed in accordance with the EU General Data Protection Regulation.

Background therapy:

None, this was a one-arm trial.

Evidence for comparator:

There was no comparator.

Actual start date of recruitment	02 May 2018
Long term follow-up planned	No
Independent data monitoring committee (IDMC) involvement?	Yes

Notes:

Population of trial subjects

Subjects enrolled per country

Country: Number of subjects enrolled	Denmark: 8
Worldwide total number of subjects	8
EEA total number of subjects	8

Notes:

Subjects enrolled per age group

In utero	0
Preterm newborn - gestational age < 37 wk	0
Newborns (0-27 days)	0
Infants and toddlers (28 days-23 months)	0
Children (2-11 years)	0
Adolescents (12-17 years)	0
Adults (18-64 years)	4
From 65 to 84 years	4

85 years and over	0
-------------------	---

Subject disposition

Recruitment

Recruitment details:

The subjects were recruited at a single trial centre in Denmark.

Pre-assignment

Screening details:

A total of 9 subjects were screened and 8 were enrolled in the trial. The reason for the screen failure was due to not fulfilling inclusion criteria 3 (average faecal wet weight excretion of ≥ 1500 g/day during the baseline balance study) and 4 (average urine production < 2000 mL/day during the baseline balance study).

Period 1

Period 1 title	Overall trial (overall period)
Is this the baseline period?	Yes
Allocation method	Not applicable
Blinding used	Not blinded

Blinding implementation details:

Not applicable as this was a one-arm open-label trial.

Arms

Are arms mutually exclusive?	Yes
Arm title	SBS-II

Arm description:

Subjects with short bowel syndrome and intestinal insufficiency

Arm type	Experimental
Investigational medicinal product name	Apraglutide
Investigational medicinal product code	FE 203799
Other name	
Pharmaceutical forms	Powder for solution for injection
Routes of administration	Subcutaneous use

Dosage and administration details:

The subjects were to receive a subcutaneous dose of 5 mg FE 203799 once weekly for 4 weeks

Arm title	SBS-IF
------------------	--------

Arm description:

Subjects with short bowel syndrome and intestinal failure

Arm type	Experimental
Investigational medicinal product name	Apraglutide
Investigational medicinal product code	FE 203799
Other name	
Pharmaceutical forms	Powder for solution for injection
Routes of administration	Subcutaneous use

Dosage and administration details:

The subjects were to receive a subcutaneous dose of 5 mg FE 203799 once weekly for 4 weeks

Adverse events

Adverse events information

Timeframe for reporting adverse events:

Adverse events (AE) s were recorded from screening until the final visit 4-6 weeks after the last dose.

Adverse event reporting additional description:

An AE having onset on or after the day of the first administration of trial drug was considered treatment emergent. Adverse events were reported for the safety analysis set, comprising all subjects who received a treatment injection at least once.

Assessment type	Systematic

More information

Substantial protocol amendments (globally)

Were there any global substantial amendments to the protocol? Yes

Date	Amendment
09 April 2018	The dose was reduced from 25 mg to 5 mg, to change the approach for the first dosing in patients to a lower dose, which would be optimal for a first-in-patient trial, avoiding exposure of patients to potentially unnecessary elevated concentrations of the active compound. The change was based on thorough analyses of older and recent pharmacology data collected in nonclinical studies which suggested that a lower dose of FE 203799, such as 5 mg, could also show pharmacological activity.
06 December 2018	The substantial changes of the amendment were: <ul style="list-style-type: none">• The possibility to conduct interim analyses during the trial, if deemed necessary by the sponsor, was introduced. It was stated that any potential influence of interim analysis on the continued trial conduct would be minimised by appropriate measures.• The sponsor of the trial was changed from GlyPharma Therapeutic Inc. to GlyPharma Therapeutic Inc. (a wholly owned subsidiary of Therachon AG, Aeschenvorstadt 36, CH-4051 Basel Switzerland). Consequently, the sponsor medical officer and list of trial personnel were changed.• An additional laboratory was included in order to analyse all exploratory biomarkers.
01 February 2019	The substantial change of the amendment was: <ul style="list-style-type: none">• The inclusion of SBS patients with intestinal insufficiency (IF)• Addition of an inclusion criterion for male contraception• Change of exclusion criterion 16: Patients with changes in the use of systemic corticosteroids, methotrexate, cyclosporine, tacrolimus, sirolimus, infliximab, or other biologic therapy/immune modifiers within 3 months of screening were to be excluded from the protocol
27 June 2019	The substantial changes of the amendment were: <ul style="list-style-type: none">• A change in the company that owns the sponsor, GlyPharma Therapeutic Inc., from Therachon AG to VectivBio Holding AG.• A change of company name of one of the analysis laboratories was dated 09-Apr-2018 and approved prior to enrolment of the first patient.

Notes:

Interruptions (globally)

Were there any global interruptions to the trial? No

Limitations and caveats

Limitations of the trial such as small numbers of subjects analysed or technical problems leading to unreliable data.

None.

Notes:
