Notes:

#### Paediatric regulatory details

Is trial part of an agreed paediatric investigation plan (PIP)	No
Does article 45 of REGULATION (EC) No 1901/2006 apply to this trial?	No
Does article 46 of REGULATION (EC) No 1901/2006 apply to this trial?	No

Notes:

## Results analysis stage

Analysis stage	Final
Date of interim/final analysis	08 July 2020
Is this the analysis of the primary completion data?	Yes
Primary completion date	12 December 2019
Global end of trial reached?	Yes
Global end of trial date	12 December 2019
Was the trial ended prematurely?	No

Notes:

## General information about the trial

Main objective of the trial:

The primary objective of the trial was to evaluate the effect of brensocatib compared with placebo on time to first pulmonary exacerbation over the 24-week treatment period.

Protection of trial subjects:

This trial was performed in compliance with Good Clinical Practice (GCP), including the archiving of essential documents, the International Council for Harmonisation (ICH) Guidelines, and is consistent with the ethical principles of the Declaration of Helsinki.

Background therapy: -

Evidence for comparator: -

Actual start date of recruitment	31 October 2017
Long term follow-up planned	No
Independent data monitoring committee (IDMC) involvement?	Yes

Notes:

## Population of trial subjects

### Subjects enrolled per country

Country: Number of subjects enrolled	Netherlands: 7
Country: Number of subjects enrolled	Poland: 17
Country: Number of subjects enrolled	Spain: 13
Country: Number of subjects enrolled	United Kingdom: 8
Country: Number of subjects enrolled	Belgium: 2
Country: Number of subjects enrolled	Bulgaria: 17
Country: Number of subjects enrolled	Denmark: 5
Country: Number of subjects enrolled	Germany: 15
Country: Number of subjects enrolled	Australia: 49
Country: Number of subjects enrolled	Italy: 10
Country: Number of subjects enrolled	Korea, Republic of: 15
Country: Number of subjects enrolled	New Zealand: 29
Country: Number of subjects enrolled	Singapore: 2
Country: Number of subjects enrolled	United States: 67
Worldwide total number of subjects	256
EEA total number of subjects	86

Notes:

<b>Subjects enrolled per age group</b>	
In utero	0
Preterm newborn - gestational age < 37 wk	0
Newborns (0-27 days)	0
Infants and toddlers (28 days-23 months)	0
Children (2-11 years)	0
Adolescents (12-17 years)	0
Adults (18-64 years)	106
From 65 to 84 years	150
85 years and over	0

## Subject disposition

### Recruitment

Recruitment details:

Subjects took part in the trial at 116 sites in 14 countries from 31 October 2017 to 12 December 2019.

### Pre-assignment

Screening details:

416 subjects were screened with 160 subjects resulting in a screen failure. A total of 256 subjects were randomized.

### Period 1

Period 1 title	Overall study (overall period)
Is this the baseline period?	Yes
Allocation method	Randomised - controlled
Blinding used	Double blind
Roles blinded	Investigator, Subject

### Arms

Are arms mutually exclusive?	Yes
------------------------------	-----

<b>Arm title</b>	Brensocatib 10 mg
------------------	-------------------

Arm description:

Subjects received brensocatib 10 mg once daily before breakfast, for 24 weeks.

Arm type	Experimental
Investigational medicinal product name	Brensocatib
Investigational medicinal product code	
Other name	INS1007
Pharmaceutical forms	Tablet
Routes of administration	Oral use

Dosage and administration details:

Tablets administered orally.

<b>Arm title</b>	Brensocatib 25 mg
------------------	-------------------

Arm description:

Subjects received brensocatib 25 mg once daily before breakfast, for 24 weeks.

Arm type	Experimental
Investigational medicinal product name	Brensocatib
Investigational medicinal product code	
Other name	INS1007
Pharmaceutical forms	Tablet
Routes of administration	Oral use

Dosage and administration details:

Tablets administered orally.

<b>Arm title</b>	Placebo
------------------	---------

Arm description:

Subjects received the matching placebo once daily before breakfast, for 24 weeks.

Arm type	Placebo
Investigational medicinal product name	Placebo
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Tablet
Routes of administration	Oral use

---

Dosage and administration details:

Matching placebo tablet administered orally.

<b>Number of subjects in period 1</b>	Brensocatib 10 mg	Brensocatib 25 mg	Placebo
Started	82	87	87
Completed	76	75	74
Not completed	6	12	13
Adverse event, serious fatal	-	1	-
Reason Missing	-	2	-
Consent withdrawn by subject	2	4	10
Physician decision	-	1	1
Adverse event, non-fatal	3	3	2
Non-compliance of study drug	-	1	-
Lost to follow-up	1	-	-

PD population: All subjects who received at least 1 dose of study treatment, had at least 1 predose and 1 postdose measurement for neutrophil elastase (NE), or proteinase 3, or cathepsin G, or other biomarkers, and had no major protocol deviations considered to impact the analysis of PD data. 1 subject who was randomized to received placebo also received brensocatic 25 mg. The subject is excluded from the placebo PD population and included in brensocatic 25 mg PD population.	

### Primary: Time to the first pulmonary exacerbation over 24-week treatment period

End point title	Time to the first pulmonary exacerbation over 24-week treatment period
End point description: Pulmonary exacerbation was defined as having 3 or more of the following symptoms for at least 48 hours resulting in a physician's decision to prescribe antibiotics: 1. Increased cough 2. Increased sputum volume or change in sputum consistency 3. Increased sputum purulence 4. Increased breathlessness and/or decreased exercise tolerance 5. Fatigue and/or malaise 6. Hemoptysis A minimum of 4 weeks must have occurred between one exacerbation onset and the next. Any exacerbation that occurred less than 4 weeks from the prior exacerbation was not considered a new exacerbation. The median time to first exacerbation could not be estimated for brensocatic 10 mg or brensocatic 25 mg. 99999 = The median, upper and lower limit of confidence interval (CI) was not estimated due to insufficient number of participants with exacerbations in the groups.	
End point type	Primary
End point timeframe: Baseline to Week 24	

End point values	Brensocatib 10 mg	Brensocatib 25 mg	Placebo

### Secondary: Change from baseline in Quality of Life Questionnaire – Bronchiectasis (QOL-B) respiratory symptoms domain score over 24 week treatment period

End point title	Change from baseline in Quality of Life Questionnaire – Bronchiectasis (QOL-B) respiratory symptoms domain score over 24 week treatment period
-----------------	--

End point description:

The QOL-B is a validated, self-administered patient reported outcome (PRO) that assesses symptoms, functioning, and health-related (HR) QOL for subjects with non-cystic fibrosis bronchiectasis (NCFBE). The QOL-B contains 37 items in 8 domains (Respiratory Symptoms, Physical Functioning, Role Functioning, Emotional Functioning, Social Functioning, Vitality, Health Perceptions and Treatment Burden). Each of the 37 items is scored from 1 to 4, and each of the 8 domains scale scores is standardized on a 0-100 point scale, with higher scores representing fewer symptoms or better functioning and HR QoL. A positive change from baseline indicates improvement in symptoms. For this outcome measure, the respiratory symptoms domain score was reported. The analysis was based on mixed model for repeated measures (MMRM) approach. Number of subjects analysed are the number of subjects with data available for analyses at the latest assessment visit over the 24-week treatment period.

End point type	Secondary

### Secondary: Change from screening in post-bronchodilator percent predicted forced expiratory volume in 1 second (ppFEV1) over 24-week treatment period

End point title	Change from screening in post-bronchodilator percent predicted forced expiratory volume in 1 second (ppFEV1) over 24-week treatment period
-----------------	--

End point description:

FEV1 was used to assess lung function and is the maximum amount of air that can be forced out in one second after taking a deep breath. The percent predicted FEV1 was calculated by converting the spirometer reading to a percentage of what would be predicted as normal FEV1 based on a several personal factors (e.g. sex, age, etc.). Change from screening in percent predicted FEV1 to Week 24 was calculated as: percent predicted FEV1 value at Week 24 and percent predicted FEV1 value at screening. A positive percent change from screening indicates an improvement in lung function. The analysis was done using analysis of covariance (ANCOVA) with Pa colonization status and maintenance macrolide antibiotic use at Baseline as covariates. Number of subjects analysed are the number of subjects with data available for analyses over the 24-week treatment period.

## More information

### Substantial protocol amendments (globally)

Were there any global substantial amendments to the protocol? Yes

Date	Amendment
12 March 2018	The amendment included the following changes: * Added description of healthy volunteer studies to Introduction * Added text to align Study Objectives with Study Endpoints * Added 2 weeks to the Screening Period (from 4 to 6 weeks) in order to accommodate additional dental screening and cleaning procedures * Added urine samples for biomarker assessment and pregnancy test * Clarified acceptable contraception procedures * Added exclusion for Papillon-Lefevre syndrome * Added that subjects who discontinued for adverse event (AE) were followed to resolution or stabilization * Added physical examination, CRP and prothrombin time tests, collection of pharmacokinetic (PK) sample timing to Schedule of Assessments * Added details to the sample size determination
27 April 2018	The amendment included the following changes: * Clarified the duration of AE collection * Provided $\pm 3$ day window for data collection after discontinuation for AE and a $\pm 3$ day window allowance for study visits
24 September 2018	The amendment included the following changes: * Updated contact for Regulatory Affairs personnel * Specified that Data Monitoring Committee (DMC) members would review data in semi-blinded or unblinded manner at predetermined intervals * Added chest computed tomography (CT) scan for subjects whose past radiographic image records were not available * Aligned study days in Study Schematic with Schedule of Assessments * Revised to state that subjects could not undergo sputum induction procedure during Screening; subjects unable to produce sputum at Screening was considered a screen failure * Revised to state that any subject with pulmonary exacerbation requiring antibiotics after Screening and before randomization was a screen failure * Clarified that subjects with hypothyroidism currently treated with thyroid-stimulating hormone (TSH), and whose T3/T4 levels were within normal range were eligible for enrollment in the trial * Clarified enrollment eligibility for subjects who required repeat electrocardiogram (ECG) and or pulmonary function tests that were not deemed clinically significant * Clarified that subjects who were edentulous still received a dental examination to check for sores caused by dentures * Added requirement that subjects complete PRO questionnaires prior to first dose of study drug * Added meal time for subjects in the Intense PK Population * Added Child-Pugh Score for subjects with abnormal liver function tests * Added sparse PK sampling for subjects at all sites with processing ability * Added calculation of neutrophil elastase method * Added literature references

Notes:

### Interruptions (globally)

Were there any global interruptions to the trial? No

### Limitations and caveats

None reported
