

Clinical trial results:

A Double-blind, Randomized, Placebo-controlled Study to Evaluate the Safety and Efficacy of Intravenous Sulbactam-ETX2514 in the Treatment of Hospitalized Adults With Complicated Urinary Tract Infections, Including Acute Pyelonephritis.

Summary

EudraCT number	2017-002608-29
Trial protocol	BG

Paediatric regulatory details

Is trial part of an agreed paediatric investigation plan (PIP)	No
Does article 45 of REGULATION (EC) No 1901/2006 apply to this trial?	No
Does article 46 of REGULATION (EC) No 1901/2006 apply to this trial?	No

Notes:

Results analysis stage

Analysis stage	Final
Date of interim/final analysis	21 June 2018
Is this the analysis of the primary completion data?	Yes
Primary completion date	17 May 2018
Global end of trial reached?	Yes
Global end of trial date	17 May 2018
Was the trial ended prematurely?	No

Notes:

General information about the trial

Main objective of the trial:

The primary objective of this study was to evaluate the safety profile of sulbactam-ETX2514 (ETX2514SUL) versus placebo in patients with complicated urinary tract infection (cUTI), including acute pyelonephritis (AP).

The efficacy (secondary) objectives of this study were the following:

- To evaluate the efficacy of ETX2514SUL in patients with cUTI, including AP, for the Microbiologically Modified Intent-to-Treat (m-MITT) Population
- To compare the clinical cure rate in the 2 treatment groups for the Modified Intent-to-Treat (MITT), m-MITT, Clinically Evaluable (CE), and Microbiologically Evaluable (ME) Populations at the Test-of-Cure (TOC) Visit
- To compare the microbiological eradication rate for the m-MITT and ME Populations at the TOC Visit.

Protection of trial subjects:

The study was conducted in accordance with the Declaration of Helsinki and with all applicable laws and regulations of the locale and country where the study was conducted, and in compliance with Good Clinical Practice (GCP) Guidelines.

The rationale of the study, procedural details, and investigational goals were explained to each patient, along with potential risks and benefits. Each patient was assured of his/her right to withdraw from the study at any time. Prior to the initiation of any study procedures, each patient signed and dated an approved Informed Consent Form (ICF). The original was kept on file by the Investigator with the patient's records, and a copy was given to each patient.

Background therapy: -

Evidence for comparator: -

Actual start date of recruitment	30 January 2018
Long term follow-up planned	No
Independent data monitoring committee (IDMC) involvement?	No

Notes:

Population of trial subjects

Subjects enrolled per country

Country: Number of subjects enrolled	Belarus: 15
Country: Number of subjects enrolled	Russian Federation: 22
Country: Number of subjects enrolled	Ukraine: 24
Country: Number of subjects enrolled	Bulgaria: 19
Worldwide total number of subjects	80
EEA total number of subjects	19

Notes:

Subjects enrolled per age group	
In utero	0
Preterm newborn - gestational age < 37 wk	0
Newborns (0-27 days)	0
Infants and toddlers (28 days-23 months)	0
Children (2-11 years)	0
Adolescents (12-17 years)	0
Adults (18-64 years)	55
From 65 to 84 years	25
85 years and over	0

Subject disposition

Recruitment

Recruitment details: -

Pre-assignment

Screening details:

Screening procedures were performed as standard of care within 48 hours prior to randomization on Day 1, with the exception of local laboratory serum creatinine determination, which was obtained at the local laboratory within 24 hours prior to the first dose of Study Drug.

Period 1

Period 1 title	Overall Trial (overall period)
Is this the baseline period?	Yes
Allocation method	Randomised - controlled
Blinding used	Double blind
Roles blinded	Subject, Investigator

Blinding implementation details:

The Investigator, site personnel, Sponsor, and the Sponsor's designees involved in monitoring, data management, and other aspects of the study were blinded to treatment assignment. An unblinded site monitor was assigned to review unblinded pharmacy data and followed documented procedures to ensure that the blind was maintained throughout the study.

Arms

Are arms mutually exclusive?	Yes
Arm title	ETX2514SUL+ IMI

Arm description:

ETX2514/sulbactam (ETX2514SUL) + imipenem/cilastatin (IMI)

Arm type	Experimental
Investigational medicinal product name	ETX2514
Investigational medicinal product code	
Other name	ETX2514
Pharmaceutical forms	Powder for infusion
Routes of administration	Intravenous use

Dosage and administration details:

Patients received 1 g ETX2514/1 g sulbactam intravenous (IV) administered every 6 hours (q6h) over 3 hours. In addition, all patients were administered background therapy with 500 mg/500 mg IMI IV q6h infused over 30 minutes. Infusions occurred q6h for 7 calendar days (28 doses), with a prolongation of therapy up to 14 days if clinically indicated in patients with concurrent bacteremia.

Investigational medicinal product name	Sulbactam sodium
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Powder for infusion
Routes of administration	Intravenous use

Dosage and administration details:

Patients received 1 g ETX2514/1 g sulbactam intravenous (IV) administered every 6 hours (q6h) over 3 hours. In addition, all patients were administered background therapy with 500 mg/500 mg IMI IV q6h infused over 30 minutes. Infusions of Study Drug occurred for 7 calendar days (28 doses), with a prolongation of therapy up to 14 days if clinically indicated in patients with concurrent bacteremia.

Investigational medicinal product name	IMI
Investigational medicinal product code	
Other name	Imipenem/cilastatin
Pharmaceutical forms	Powder for infusion
Routes of administration	Intravenous use

Dosage and administration details:

All patients were administered background therapy with 500 mg/500 mg IMI administered intravenous infused over 30 minutes every 6 hours for 7 calendar days (28 doses), with a prolongation of therapy up to 14 days if clinically indicated in patients with concurrent bacteremia.

Arm title	Placebo + IMI
Arm description: Matching placebo + imipenem/cilastatin (IMI)	
Arm type	Placebo
Investigational medicinal product name	Sodium chloride
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Solution for infusion
Routes of administration	Intravenous use

Dosage and administration details:

Patients received matching placebo (0.9% sodium chloride) IV administered q6h over 3 hours. In addition, all patients were administered background therapy with 500 mg/500 mg IMI IV q6h infused over 30 minutes. Infusions occurred q6h for 7 calendar days (28 doses), with a prolongation of therapy up to 14 days if clinically indicated in patients with concurrent bacteremia.

Investigational medicinal product name	IMI
Investigational medicinal product code	
Other name	Imipenem/cilastatin
Pharmaceutical forms	Powder for infusion
Routes of administration	Intravenous use

Dosage and administration details:

All patients were administered background therapy with 500 mg/500 mg IMI administered intravenous infused over 30 minutes every 6 hours for 7 calendar days (28 doses), with a prolongation of therapy up to 14 days if clinically indicated in patients with concurrent bacteremia.

Primary: Overall Response at TOC Visit Based on EMA Criteria (m-MITT Population)

End point title	Overall Response at TOC Visit Based on EMA Criteria (m-MITT Population)
-----------------	---

End point description:

This endpoint was defined as the proportion of patients with an overall success (clinical cure and microbiologic eradication) for the m-MITT Population (patients who met MITT criteria and had at least 1 baseline uropathogen from an appropriately collected pretreatment baseline urine or blood sample) at TOC Visit.

This endpoint was programmatically determined based on the clinical and microbiologic outcomes from the EMA criteria (demonstration that the baseline bacterial pathogen(s) was reduced to <10E3 CFU/mL on urine culture and negative on repeat blood culture [if positive at baseline]) as 1 of the following overall responses:

- Overall success: A patient who was deemed a clinical cure AND who achieved microbiologic eradication.
- Overall failure: A patient who was deemed a clinical failure OR was deemed to have microbiological persistence.
- Overall indeterminate: Insufficient data were available to determine if the patient was an overall success or failure.

End point type	Primary
----------------	---------

End point timeframe:

From the start of treatment until the TOC Visit. The TOC Visit was to be completed 7 days (±1 day) after the end of treatment for all patients.
