Paediatric regulatory details

Is trial part of an agreed paediatric investigation plan (PIP)	No
Does article 45 of REGULATION (EC) No 1901/2006 apply to this trial?	No

Does article 46 of REGULATION (EC) No 1901/2006 apply to this trial?	Yes
--	-----

Notes:

Results analysis stage

Analysis stage	Final
Date of interim/final analysis	25 June 2024
Is this the analysis of the primary completion data?	Yes
Primary completion date	23 May 2024
Global end of trial reached?	Yes
Global end of trial date	23 May 2024
Was the trial ended prematurely?	No

Notes:

General information about the trial

Main objective of the trial:

The primary objective of Part 1 is the primary objective of the entire study.

The primary objective of Part 1 is: To evaluate the effect of ZX008 0.8 mg/kg/day versus placebo as adjunctive therapy for the treatment of uncontrolled seizures in children and adults with Lennox-Gastaut syndrome (LGS) based on the change in frequency of seizures that result in drops between baseline and the combined Titration and Maintenance Periods (T+M)

The primary objective of Part 2 is to assess the long-term safety and tolerability of ZX008 in children and adults with LGS with regard to AEs, laboratory parameters, physical examination, neurological examination, Tanner Staging, cognition (BRIEF), vital signs (blood pressure, heart rate (HR), temperature, and respiratory rate), electrocardiograms (ECG), echocardiograms (ECHO), body weight, and body mass index (BMI).

Protection of trial subjects:

During the conduct of the study all participants were closely monitored

Background therapy:

Background therapy as permitted in the protocol

Evidence for comparator:

Not applicable

Actual start date of recruitment	27 November 2017
Long term follow-up planned	Yes
Long term follow-up rationale	Safety
Long term follow-up duration	72 Months
Independent data monitoring committee (IDMC) involvement?	Yes

Notes:

Population of trial subjects

Subjects enrolled per country

Country: Number of subjects enrolled	Canada: 7
Country: Number of subjects enrolled	United States: 122
Country: Number of subjects enrolled	Mexico: 3
Country: Number of subjects enrolled	Spain: 25
Country: Number of subjects enrolled	Italy: 19
Country: Number of subjects enrolled	Poland: 18
Country: Number of subjects enrolled	France: 17

Country: Number of subjects enrolled	Germany: 17
Country: Number of subjects enrolled	Belgium: 12
Country: Number of subjects enrolled	Netherlands: 9
Country: Number of subjects enrolled	Denmark: 3
Country: Number of subjects enrolled	Sweden: 2
Country: Number of subjects enrolled	Australia: 9
Country: Number of subjects enrolled	Japan: 33
Worldwide total number of subjects	296
EEA total number of subjects	122

Notes:

Subjects enrolled per age group	
In utero	0
Preterm newborn - gestational age < 37 wk	0
Newborns (0-27 days)	0
Infants and toddlers (28 days-23 months)	0
Children (2-11 years)	117
Adolescents (12-17 years)	87
Adults (18-64 years)	92
From 65 to 84 years	0
85 years and over	0

Subject disposition

Recruitment

Recruitment details:

The study started to enroll participants in November 2017 and concluded in May 2024. Cohort A included participants enrolled at sites in North America, Europe, and Australia. Cohort B included participants enrolled at sites in Japan only.

Pre-assignment

Screening details:

The Participant Flow refers to the All Enrolled Participants Set for Part 1 and OLE Safety Population for Part 2 of the study. As planned, Part 2 summaries were presented by the participant's Part 1 treatment groups (placebo, ZX008 0.2 mg/kg/day, ZX008 0.8 mg/kg/day).

Period 1

Period 1 title	Part 1: Double-Blind Period
Is this the baseline period?	Yes
Allocation method	Randomised - controlled
Blinding used	Double blind
Roles blinded	Subject, Investigator, Carer, Assessor

Arms

Are arms mutually exclusive?	Yes
Arm title	Cohort A: Placebo

Arm description:

Part 1: Participants received matching placebo as an oral solution, twice a day (bid) over 2 weeks of Titration Period and an additional 12 weeks of Maintenance Period. Participants who completed the Maintenance Period and did not continue in Part 2, and participants who discontinued from Part 1 early, were tapered off study medication over 8 days. In Part 2 (OLE Period): Participants initially received ZX008 0.2 mg/kg/day for 1 month. After 1 month, the Investigator could adjust the dose if needed. Participants received ZX008 for up to 12 months in OLE Period.

Arm type	Placebo
Investigational medicinal product name	Placebo
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Oral solution
Routes of administration	Oral use

Dosage and administration details:

Participants received matching placebo at pre-specified time-points.

Arm title	Cohort A: ZX008 0.2 mg/kg/day
------------------	-------------------------------

Arm description:

Part 1: Participants received ZX008 0.2 milligram per kilogram per day (mg/kg/day) during the 2-week Titration. Following titration, participants received ZX008 0.2 mg/kg/day as an oral solution, bid for an additional 12 weeks during Maintenance Period. Participants who completed the Maintenance Period and did not continue in Part 2, and participants who discontinued from Part 1 early, were tapered off study medication over 8 days. In Part 2 (OLE Period): Participants initially received ZX008 0.2 mg/kg/day for 1 month. After 1 month at a dose of ZX008 0.2 mg/kg/day, the Investigator could adjust the dose if needed. Participants received ZX008 for up to 12 months in OLE Period.

Arm type	Experimental
Investigational medicinal product name	Fenfluramine hydrochloride
Investigational medicinal product code	ZX008
Other name	
Pharmaceutical forms	Oral solution
Routes of administration	Oral use

Dosage and administration details:

Participants received ZX008 at pre-specified time-points.

Arm title	Cohort A: ZX008 0.8 mg/kg/day
Arm description:	
Part 1: Participants were titrated to their blinded randomized dose of ZX008 over the 2-week Titration from 0.2 mg/kg/day to ZX008 0.8 mg/kg/day (or a maximum dose of 30 mg/day or 20 mg/day for participants taking concomitant stiripentol [STP]). Following titration, participants continued to receive the randomized dose of ZX008 as an oral solution, bid for an additional 12 weeks during Maintenance Period. Participants who completed the Maintenance Period and did not continue in Part 2, and participants who discontinued from Part 1 early, were tapered off study medication over 8 days. In Part 2 (OLE Period): Participants initially received ZX008 0.2 mg/kg/day for 1 month. After 1 month at a dose of ZX008 0.2 mg/kg/day, the Investigator could adjust the dose if needed. Participants received ZX008 for up to 12 months in OLE Period.	
Arm type	Experimental
Investigational medicinal product name	Fenfluramine hydrochloride
Investigational medicinal product code	ZX008
Other name	
Pharmaceutical forms	Oral solution
Routes of administration	Oral use
Dosage and administration details:	
Participants received ZX008 at pre-specified time-points.	
Arm title	Cohort B: Placebo
Arm description:	
Part 1: Participants received matching placebo as an oral solution, bid over 2 weeks of Titration Period and an additional 12 weeks of Maintenance Period. Participants who completed the Maintenance Period and did not continue in Part 2, and participants who discontinued from Part 1 early, were tapered off study medication over 8 days. In Part 2 (OLE Period): Participants initially received ZX008 0.2 mg/kg/day for 1 month. After 1 month at a dose of ZX008 0.2 mg/kg/day, the Investigator could adjust the dose if needed. Participants received ZX008 for up to 12 months in OLE Period. Participants who completed 12 months OLE Period had option to receive ZX008 for up to 72 months, or until ZX008 is approved in the participant's country.	
Arm type	Placebo
Investigational medicinal product name	Placebo
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Oral solution
Routes of administration	Oral use
Dosage and administration details:	
Participants received matching placebo at pre-specified time-points.

Reporting group description:

Part 1: Participants received ZX008 0.2 milligram per kilogram per day (mg/kg/day) during the 2-week Titration. Following titration, participants received ZX008 0.2 mg/kg/day as an oral solution, bid for an additional 12 weeks during Maintenance Period. Participants who completed the Maintenance Period and did not continue in Part 2, and participants who discontinued from Part 1 early, were tapered off study medication over 8 days. In Part 2 (OLE Period): Participants initially received ZX008 0.2 mg/kg/day for 1 month. After 1 month at a dose of ZX008 0.2 mg/kg/day, the Investigator could adjust the dose if needed. Participants received ZX008 for up to 12 months in OLE Period.

Reporting group title	Cohort A: ZX008 0.8 mg/kg/day
-----------------------	-------------------------------

Reporting group description:

Part 1: Participants were titrated to their blinded randomized dose of ZX008 over the 2-week Titration from 0.2 mg/kg/day to ZX008 0.8 mg/kg/day (or a maximum dose of 30 mg/day or 20 mg/day for participants taking concomitant stiripentol [STP]). Following titration, participants continued to receive the randomized dose of ZX008 as an oral solution, bid for an additional 12 weeks during Maintenance Period. Participants who completed the Maintenance Period and did not continue in Part 2, and participants who discontinued from Part 1 early, were tapered off study medication over 8 days. In Part 2 (OLE Period): Participants initially received ZX008 0.2 mg/kg/day for 1 month. After 1 month at a dose of ZX008 0.2 mg/kg/day, the Investigator could adjust the dose if needed. Participants received ZX008 for up to 12 months in OLE Period.

Reporting group title	Cohort B: Placebo
-----------------------	-------------------

Reporting group description:

Part 1: Participants received matching placebo as an oral solution, bid over 2 weeks of Titration Period and an additional 12 weeks of Maintenance Period. Participants who completed the Maintenance Period and did not continue in Part 2, and participants who discontinued from Part 1 early, were tapered off study medication over 8 days. In Part 2 (OLE Period): Participants initially received ZX008 0.2 mg/kg/day for 1 month. After 1 month at a dose of ZX008 0.2 mg/kg/day, the Investigator could adjust the dose if needed. Participants received ZX008 for up to 12 months in OLE Period. Participants who completed 12 months OLE Period had option to receive ZX008 for up to 72 months, or until ZX008 is approved in the participant's country.

Reporting group title	Cohort B: ZX008 0.2 mg/kg/day
-----------------------	-------------------------------

Primary: Part 1: Percent change from Baseline in the frequency of seizures that result in drops (ESC-confirmed) in the combined Titration and Maintenance Period (T+M) in the ZX008 0.8 mg/kg/day group compared to the placebo group

End point title	Part 1: Percent change from Baseline in the frequency of seizures that result in drops (ESC-confirmed) in the combined Titration and Maintenance Period (T+M) in the ZX008 0.8 mg/kg/day group compared to the placebo group ^[1]
-----------------	---

End point description:

Percent change in frequency of seizures that result in drops (DSF: drop seizure frequency) per 28 days between the combined Titration and Maintenance (T+M) and Baseline. The percent change from Baseline DSF was calculated as the change in DSF between T+M and Baseline / DSF during Baseline* 100. The seizure types included in the count were: atonic, tonic, tonic/atonic, generalized tonic-clonic, and secondarily generalized tonic-clonic seizures resulting in drops. The Modified Intent-to-Treat (mITT) Population included all randomized participants who received at least 1 dose of ZX008 or placebo and for whom at least 1 week of diary data were available.

End point type	Primary
----------------	---------

End point timeframe:

From Baseline up to 14 weeks [Titration Period (2 weeks) + Maintenance Period (12 weeks)]

Notes:

[1] - The end point is not reporting statistics for all the arms in the baseline period. It is expected all the baseline period arms will be reported on when providing values for an end point on the baseline period. Justification: The 'Cohort A: ZX008 0.2 mg/kg/day' and 'Cohort B: ZX008 0.2 mg/kg/day' arms which was part of baseline period were not required for the primary endpoint assessment. Therefore, no data was reported for this arm.

Secondary: Part 1: Percent change from Baseline in frequency of all seizures that typically result in drops in T+M, whether ESC-confirmed as drop or not in the ZX008 0.8 mg/kg/day and 0.2 mg/kg/day groups independently versus placebo

End point title	Part 1: Percent change from Baseline in frequency of all seizures that typically result in drops in T+M, whether ESC-confirmed as drop or not in the ZX008 0.8 mg/kg/day and 0.2 mg/kg/day groups independently versus placebo
-----------------	--

End point description:

Seizures that typically result in drops included all: generalized tonic-clonic seizures [GTC], secondarily generalized tonic-clonic [SGTC], tonic seizures [TS], atonic seizures [AS], and tonic/tonic seizures [TA], whether confirmed by the ESC or not. Seizures that result in a drop were defined as seizures involving the entire body, trunk, or head that led to a fall, injury, slumping in a chair, or the participant's head hitting a surface or that could have led to a fall or injury, depending on the patient's position at the time of the seizure. The mITT population included all randomized participants who received at least 1 dose of ZX008 or placebo and for whom at least 1 week of diary data were available.

Secondary: Part 1: Percentage of participants who achieved a worsening from Baseline, or >0%, >=25%, >=50%, >=75%, 100% reduction, and "near seizure freedom" between Baseline and T+M, and Baseline and M, in seizures that typically results in drops

End point title	Part 1: Percentage of participants who achieved a worsening from Baseline, or >0%, >=25%, >=50%, >=75%, 100% reduction, and "near seizure freedom" between Baseline and T+M, and Baseline and M, in seizures that typically results in drops
-----------------	--

End point description:

Seizures that typically result in drops included all: GTC, SGTC, TS, AS, and TA, whether confirmed by the ESC or not. The participants who experienced a worsening no change from Baseline (ie $\leq 0\%$ reduction); $>0\%$, $\geq 25\%$, $\geq 50\%$, $\geq 75\%$, and 100% reduction (a 100% reduction was equivalent to achieving seizure freedom during T+M); and "near seizure freedom," (defined as 0 or 1 seizure leading to a drop) during combined T+M Period and Maintenance Period were reported. The mITT population included all randomized participants who received at least 1 dose of ZX008 or placebo and for whom at least 1 week of diary data were available. Here, 'n' included those participants who were evaluable at specified time point.

Secondary: Part 1: Change from Baseline in number of seizure-free days during T+M and M Period

End point title	Part 1: Change from Baseline in number of seizure-free days during T+M and M Period
End point description: A day with no seizures leading to a drop was defined as a day for which electronic (e) diary data were available and no drop seizures were reported. The total number of drop seizure-free days was calculated per 28 days for Baseline and for T+M. The mITT population included all randomized participants who received at least 1 dose of ZX008 or placebo and for whom at least 1 week of diary data were available. Here, 'n' included those participants who were evaluable for specified category.	
End point type	Secondary
End point timeframe: From Baseline up to 14 weeks [Titration Period (2 weeks) + Maintenance Period (12 weeks)]; During Maintenance Period (12 weeks), compared to Baseline

Secondary: Part 2: Percent change from Baseline in the frequency of seizures that result in drops (ESC Confirmed) in OLE Period

End point title	Part 2: Percent change from Baseline in the frequency of seizures that result in drops (ESC Confirmed) in OLE Period
-----------------	--

End point description:

The frequency of drop seizures during a given interval was derived from the number and type of events recorded in subject electronic diaries. The seizure types included in the count were: atonic, tonic, tonic/atonic, generalized tonic-clonic, and secondarily generalized tonic-clonic seizures resulting in drops. The Open-Label Extension Modified Intent-To-Treat (mITT) Population included all participants who received at least 1 dose of ZX008 and had a valid estimate of the frequency of seizures that resulted in drops from Part 1 and at least 1 month (30 days) of valid seizure data during the OLE. As pre-specified in study design, participants in Part 2 received individualized optimized treatment (0.2 mg/kg/day to 0.8 mg/kg/day) based on Investigator discretion. Hence overall data for Part 2 is reported.

Secondary: Part 2: Percent change from Baseline in the frequency all seizures that typically result in drops between Baseline and the OLE Period whether ESC

confirmed as drop or not

End point title	Part 2: Percent change from Baseline in the frequency all seizures that typically result in drops between Baseline and the OLE Period whether ESC confirmed as drop or not
-----------------	--

End point description:

Seizures that typically result in drops included all: generalized tonic-clonic seizures [GTC], secondarily generalized tonic-clonic [SGTC], tonic seizures [TS], atonic seizures [AS], and tonic/tonic seizures [TA], whether confirmed by ESC or not. Seizures that result in a drop were defined as seizures involving entire body, trunk, or head that led to a fall, injury, slumping in a chair, or participant's head hitting a surface or that could have led to a fall or injury, depending on the patient's position at the time of the seizure. The OLE mITT population included all participants who received at least 1 dose of ZX008 and had a valid estimate of the frequency of seizures that resulted in drops from Part 1 and at least 1 month (30 days) of valid seizure data during the OLE. As pre-specified in study design, participants in Part 2 received individualized optimized treatment (0.2 mg/kg/day to 0.8 mg/kg/day) based on Investigator discretion. Hence overall data for Part 2 is reported.

Secondary: Part 2: Change from Baseline in the frequency of all countable seizures that did not result in drops (ESC confirmed) in OLE Period

End point title	Part 2: Change from Baseline in the frequency of all countable seizures that did not result in drops (ESC confirmed) in OLE Period
-----------------	--

End point description:

Non-drop seizures were defined as any countable seizure types that did not meet criteria of drop seizures, ie, are classified as CS, HC, FS with or without observable signs, MS, absence/atypical absence, infantile spasms, epileptic spasms, or other; or are seizures of following classifications that were approved for each participant as non-drop seizure types by ESC: GTC, SGTC, TS, AS, or TA. For each participant, seizure frequency per 28 days was calculated as number of seizures recorded during period, divided by number of days in period and multiplied by 28. OLE mITT: all participants who received at least 1 dose of ZX008 and had a valid estimate of the frequency of seizures that resulted in drops from Part 1 and at least 1 month (30 days) of valid seizure data during OLE. As pre-specified in study design, participants in Part 2 received individualized optimized treatment (0.2 mg/kg/day to 0.8 mg/kg/day) based on Investigator discretion. The severity of a participant's condition was rated on a 7-point scale ranging from 1 (very much improved) to 7 (very much worse), as follows: 1-very much improved, 2-much improved, 3-minimally improved, 4- no change, 5-minimally worse, 6-much worse and 7-very much worse. The OLE mITT population included all participants who received at least 1 dose of ZX008 and had a valid estimate of the frequency of seizures that resulted in drops from Part 1 and at least 1 month (30 days) of valid seizure data during the OLE. Here, number of participants analyzed included those participants who were evaluable for the assessment. 'n' included those participants who were evaluable at specified time point. As pre-specified in study design, participants in Part 2 received individualized optimized treatment (0.2 mg/kg/day to 0.8 mg/kg/day) based on Investigator discretion. Hence overall data for Part 2 is reported.

End point type	Secondary
----------------	-----------

End point timeframe:

At OLE Day 1, OLE Months (M) 1, 2, 3, 6, 9, 12, and Last Assessment (up to 72 months)

Adverse events

Adverse events information

Timeframe for reporting adverse events:

From Day 1 up to 72 months

Adverse event reporting additional description:

AEs with onset in Part 1 that are ongoing in Part 2 were not included in count of AEs in Part 2. Safety and OLE Safety were assessed. As pre-specified in study design, participants in Part 2 received individualized optimized treatment (0.2 mg/kg/day to 0.8 mg/kg/day) based on Investigator discretion. Hence overall data for Part 2 is reported.

Assessment type	Non-systematic

Reporting groups

Reporting group title	Part 1: Cohort A- ZX008 0.2 mg/kg/day
-----------------------	---------------------------------------

Reporting group description:

Participants received ZX008 0.2 milligram per kilogram per day (mg/kg/day) during the 2-week Titration. Following titration, participants received ZX008 0.2 mg/kg/day as an oral solution, bid for an additional 12 weeks during Maintenance Period. Participants who completed the Maintenance Period and did not continue in Part 2, and participants who discontinued from Part 1 early, were tapered off study medication over 8 days.

Reporting group title	Part 1:Cohort A- Placebo
-----------------------	--------------------------

Reporting group description:

Participants received matching placebo as an oral solution, twice a day (bid) over 2 weeks of Titration Period and an additional 12 weeks of Maintenance Period. Participants who completed the Maintenance Period and did not continue in Part 2, and participants who discontinued from Part 1 early, were tapered off study medication over 8 days.

Reporting group title	Part 1: Cohort B- Placebo
-----------------------	---------------------------

Reporting group description:

Participants received matching placebo as an oral solution, bid over 2 weeks of Titration Period and an additional 12 weeks of Maintenance Period. Participants who completed the Maintenance Period and did not continue in Part 2, and participants who discontinued from Part 1 early, were tapered off study medication over 8 days.

Reporting group title	Part 1: Cohort B- ZX008 0.2 mg/kg/day
-----------------------	---------------------------------------

Reporting group description:

Participants received ZX008 0.2 mg/kg/day during the 2-week Titration. Following titration, participants received ZX008 0.2 mg/kg/day as an oral solution, bid for an additional 12 weeks during Maintenance Period. Participants who completed the Maintenance Period and did not continue in Part 2, and participants who discontinued from Part 1 early, were tapered off study medication over 8 days.

Reporting group title	Part 1: Cohort B- ZX008 0.8 mg/kg/day
-----------------------	---------------------------------------

Reporting group description:

Participants were titrated to their blinded randomized dose of ZX008 over the 2-week Titration from 0.2 mg/kg/day to ZX008 0.8 mg/kg/day (or a maximum dose of 30 mg/day or 20 mg/day for participants taking concomitant STP). Following titration, participants continued to receive the randomized dose of ZX008 as an oral solution, bid for an additional 12 weeks during Maintenance Period. Participants who completed the Maintenance Period and did not continue in Part 2, and participants who discontinued from Part 1 early, were tapered off study medication over 8 days.

Reporting group title	Part 2: Cohort A- Overall
-----------------------	---------------------------

Reporting group description:

All Cohort A participants who continued in Part 2 received ZX008 0.2 milligram per kilogram per day (mg/kg/day) as an oral solution, twice a day (bid), for 1 month. After 1 month at a dose of ZX008 0.2 mg/kg/day, the Investigator could adjust the dose if needed. Dose changes were made in maximum increments of 0.2 mg/kg/day, to a maximum of 0.8 mg/kg/day (or 0.5 mg/kg/day for participants taking concomitant STP) but not to exceed a total dose of 30 mg/day (or 20 mg/kg/day for subjects taking concomitant STP). Participants received ZX008 for up to 12 months in OLE Period.

Reporting group title	Part 2: Cohort B- Overall
-----------------------	---------------------------

Reporting group description:

All Cohort B participants who continued in Part 2 received ZX008 0.2 mg/kg/day as an oral solution, twice a day (bid), for 1 month. After 1 month at a dose of ZX008 0.2 mg/kg/day, the Investigator could adjust the dose if needed. Dose changes were made in maximum increments of 0.2 mg/kg/day, to a maximum of 0.8 mg/kg/day (or 0.5 mg/kg/day for participants taking concomitant STP) but not to exceed a total dose of 30 mg/day (or 20 mg/kg/day for subjects taking concomitant STP). Participants received ZX008 for up to 12 months in OLE Period. Participants who completed 12 months OLE Period had option to receive ZX008 for up to 72 months, or until ZX008 is approved in the participant's country.

Reporting group title	Part 1: Cohort A- ZX008 0.8 mg/kg/day
-----------------------	---------------------------------------

Reporting group description:

Participants were titrated to their blinded randomized dose of ZX008 over the 2-week Titration from 0.2 mg/kg/day to ZX008 0.8 mg/kg/day (or a maximum dose of 30 mg/day or 20 mg/day for participants taking concomitant stiripentol [STP]). Following titration, participants continued to receive the randomized dose of ZX008 as an oral solution, bid for an additional 12 weeks during Maintenance Period. Participants who completed the Maintenance Period and did not continue in Part 2, and participants who discontinued from Part 1 early, were tapered off study medication over 8 days.

More information

Substantial protocol amendments (globally)

Were there any global substantial amendments to the protocol? Yes

Date	Amendment
10 January 2018	Amendment 1.0 provided updates and clarifications on the cardiac follow-up windows, added MS that result in a drop to the types of seizures assessed in the secondary endpoints, clarified inclusion and exclusion criteria, and clarified information to be recorded for adverse event reporting.
29 July 2019	Amendment 2.1 combined details from all country-specific protocols into 1 global document, incorporated corrections of the maximum daily dose for subjects taking concomitant STP, updated background information about completed and ongoing clinical trials, and provided updated information about the following: ECHO alert levels for trace regurgitation, endpoints and objectives, statistical analyses, increases in enrollment numbers, visit window allowances during the transition between Part 1 and Part 2, options for continuation of treatment after the end of the trial, prohibited medications, acceptable collection methods for urinalysis samples, phone visit options for Visit 13 and 23, and parameters regarding repeat laboratory sample collection during Baseline. It also included corrections to blood collection volumes and edits for consistency throughout.
02 July 2020	Amendment 3.1 provided study conduct information for the COVID-19 pandemic. This amendment also removed the Vineland Adaptive Behavior Scale (VABS) from the study assessments, included updated study drug storage excursions to align with updates to the Pharmacy Manual, and provided updated background information related to existing treatments for Lennox-Gastaut syndrome (LGS) and additional clinical and nonclinical study data.

Notes:

Interruptions (globally)

Were there any global interruptions to the trial? No

Limitations and caveats

None reported
