## General information about the trial

Main objective of the trial:

The primary objective of this study was to confirm that levosimendan can significantly improve respiratory function measured by supine slow vital capacity (SVC) in amyotrophic lateral sclerosis (ALS) patients.

Protection of trial subjects:

Adverse events were followed by sponsor and the independent data and safety monitoring board (DSMB).

Futility analyses were conducted by DSMB when approximately 50% and when all the subjects had been treated for 12 weeks.

The study included frequent assessment of safety measurements typical of clinical trials, including blood pressure, heart rate 12-lead ECG, safety laboratory tests and adverse events. These were performed before, during and after study drug treatment. Specific criteria were in place for the withdrawal of patients from study treatment, including increased heart rate, pregnancy and need for invasive ventilator support. The investigator could also withdraw the treatment if considered to be in the best interests of the subject. Patients were free to leave the study at any time but were also withdrawn in the event of a safety finding of clinical concern.

26 March 2020	<p>This amendment was written to describe how to perform visits 7 (week 36), 8 (week 48) and/or end-of-study visit (14-25 days after visit 8) remotely in case visit to the study centre was not possible due to restriction related to COVID-19 pandemic.</p> <p>The telephone visit was to include all protocol assessments that could be performed remotely and was to take place within the original visit window.</p> <p>In addition to the telephone visit, the investigator was to make reasonable efforts to obtain 12-lead ECG, laboratory safety assessments and vital signs for each visit. These measurements could include local practitioners and resources. In case these assessments, at least vital signs, could not be obtained within a reasonable time after the visit 7 telephone contact, the benefit-risk ratio for the subject to continue in the study was to be reassessed.</p> <p>The following assessments were not performed at telephone visits: SVC supine, weight, sitting or orthostatic changes in vital signs, blood sampling for levosimendan, OR-1855 and OR-1896 PK, for riluzole concentration and for exploratory biomarkers, and physical examination. Table 4. Study Procedures at remote visits was created.</p>
