Paediatric regulatory details

Is trial part of an agreed paediatric investigation plan (PIP)	No
Does article 45 of REGULATION (EC) No 1901/2006 apply to this trial?	No
Does article 46 of REGULATION (EC) No 1901/2006 apply to this trial?	No

Notes:

Results analysis stage

Analysis stage	Final
Date of interim/final analysis	20 August 2019
Is this the analysis of the primary completion data?	Yes
Primary completion date	06 December 2018
Global end of trial reached?	Yes
Global end of trial date	06 December 2018
Was the trial ended prematurely?	No

Notes:

General information about the trial

Main objective of the trial:

The primary objective of the study is to compare the change in glucose area under the concentration time-curve (AUC) as measured by a standardized mixed-meal tolerance test (MMTT) in participants treated with dapagliflozin and metformin receiving MEDI0382 or placebo for 28 days.

Protection of trial subjects:

The conduct of this clinical study met all local and regulatory requirements. The study was conducted in accordance with the ethical principles that have their origin in the Declaration of Helsinki and are consistent with International Conference on Harmonization guideline: Good Clinical Practice, and applicable regulatory requirements. Participants signed an informed consent form and could withdraw from the study at any time without any disadvantage and without having to provide a reason for this decision. Only investigators qualified by training and experience were selected as appropriate experts to investigate the study drug.

Background therapy: -

Evidence for comparator: -

Actual start date of recruitment	08 May 2018
Long term follow-up planned	No
Independent data monitoring committee (IDMC) involvement?	No

Notes:

Population of trial subjects

Subjects enrolled per country

Country: Number of subjects enrolled	Germany: 25
Country: Number of subjects enrolled	Hungary: 24
Worldwide total number of subjects	49
EEA total number of subjects	49

Notes:

Subjects enrolled per age group

In utero	0
Preterm newborn - gestational age < 37 wk	0
Newborns (0-27 days)	0
Infants and toddlers (28 days-23 months)	0
Children (2-11 years)	0
Adolescents (12-17 years)	0

Adults (18-64 years)	32
From 65 to 84 years	17
85 years and over	0

Subject disposition

Recruitment

Recruitment details:

The study was conducted in Germany and Hungary between 08May2018 and 06Dec2018.

Pre-assignment

Screening details:

A total of 128 participants consented to participate in the study, of which 79 were screen failures. A total of 49 participants were randomised to the study.

Period 1

Period 1 title	Overall Study (overall period)
Is this the baseline period?	Yes
Allocation method	Randomised - controlled
Blinding used	Double blind
Roles blinded	Subject, Investigator, Monitor, Carer

Arms

Are arms mutually exclusive?	Yes
Arm title	Placebo

Arm description:

Participants received subcutaneous dose of placebo matched to MEDI0382 daily for 28 days. Participants were on metformin and dapagliflozin background dual therapy during the treatment period.

Arm type	Active comparator
Investigational medicinal product name	Placebo
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Solution for injection
Routes of administration	Subcutaneous use

Dosage and administration details:

Subcutaneous (SC) dose of placebo matched to MEDI0382 daily for 28 days.

Investigational medicinal product name	Metformin
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Film-coated tablet
Routes of administration	Oral use

Dosage and administration details:

Oral metformin tablet (Maximum tolerated dose >1 g) throughout the study including screening period (up to 60 days), 4-week run-in period (for 28 days), and study treatment period for 28 days.

Investigational medicinal product name	Dapagliflozin
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Film-coated tablet
Routes of administration	Oral use

Dosage and administration details:

Oral dapagliflozin 10 mg per day was provided during the 4-week run-in period (for 28 days) for participants treated with metformin monotherapy during the screening period (up to 60 days). During the study treatment period, oral dapagliflozin 10 mg per day was provided for all participants for 28 days.

Arm title	MEDI0382
------------------	----------

Arm description:

Participants received subcutaneous dose of MEDI0382 daily (titrated up from 100 µg for 7 days to 200

µg for 7 days and to 300 µg for 14 days) for 28 days. Participants were on metformin and dapagliflozin background dual therapy during the treatment period.

Arm type	Experimental
Investigational medicinal product name	MEDI0382
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Solution for injection
Routes of administration	Subcutaneous use

Dosage and administration details:

Subcutaneous (SC) dose of MEDI0382 daily (titrated up from 100 µg for 7 days to 200 µg for 7 days and to 300 µg for 14 days) for 28 days.

Investigational medicinal product name	Dapagliflozin
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Film-coated tablet
Routes of administration	Oral use

Dosage and administration details:

Oral dapagliflozin 10 mg per day was provided during the 4-week run-in period (for 28 days) for participants treated with metformin monotherapy during the screening period (up to 60 days). During the study treatment period, oral dapagliflozin 10 mg per day was provided for all participants for 28 days.

Investigational medicinal product name	Metformin
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Film-coated tablet
Routes of administration	Oral use

Dosage and administration details:

Oral metformin tablet (Maximum tolerated dose >1 g) throughout the study including screening period (up to 60 days), 4-week run-in period (for 28 days), and study treatment period for 28 days.

Primary: Change From Baseline to Day 28 in Plasma Glucose Area Under the Concentration Time-curve From Time 0 to 4 Hours (AUC0-4hrs) as Measured by Mixed-meal Tolerance Test (MMTT)

End point title	Change From Baseline to Day 28 in Plasma Glucose Area Under the Concentration Time-curve From Time 0 to 4 Hours (AUC0-4hrs) as Measured by Mixed-meal Tolerance Test (MMTT)
End point description: The MMTT test involved the consumption of a standardised liquid meal (nutritional supplement of fat, carbohydrate, and protein) within 5 minutes. On Day -1 and on Day 28, following a minimum 10-hour fast, serial of blood samples were obtained prior and through 240 minutes after consumption of standardized meal for the measurement of glucose metabolism (with no additional food intake during this time). Intent-to-treat (ITT) population was analysed which included all participants who received any dose of study drugs analysed according to their randomized treatment group. Here, number of participants analysed "N" signifies participants who were analyzed for the specified end point.	
End point type	Primary
End point timeframe: Zero minutes before and 15, 30, 45, 60, 90, 120, 180, and 240 minutes after consumption of the standardised meal on Day -1 (Baseline) and Day 28

Secondary: Number of Participants With Treatment-emergent Adverse Events (TEAEs) and Treatment-emergent Serious Adverse Events (TESAEs)

End point title	Number of Participants With Treatment-emergent Adverse Events (TEAEs) and Treatment-emergent Serious Adverse Events (TESAEs)
-----------------	--

End point description:

An adverse event (AE) is any untoward medical occurrence in a participant who received study drug without regard to possibility of causal relationship. A serious adverse event (SAE) is an AE resulting in any of the following outcomes or deemed significant for any other reason: death; initial or prolonged inpatient hospitalization; life threatening experience (immediate risk of dying); persistent or significant disability/incapacity; congenital anomaly. The TEAEs are defined as events present at baseline that worsened in intensity after administration of study drug or events absent at baseline that emerged after administration of study drug. As-treated population was analysed which included all participants who received any dose of study drug and analysed according to the treatment they actually received.

End point title	Time to Reach Maximum Observed Serum Concentration (Tmax) of MEDI0382 ^[4]
-----------------	--

End point description:

Time to reach maximum observed serum concentration (Tmax) of MEDI0382 is reported. MEDI0382 pharmacokinetic (PK) population was analysed which included all participants who received at least 1 dose of MEDI0382 and had at least 1 MEDI0382 PK sample above the lower limit of quantitation. Here, number analysed "n" signifies participants who were analysed for the specified day.

End point type	Secondary
----------------	-----------

End point timeframe:

Pre-dose and 0.5, 1, 2, 4, 6, 8, 12, and 24 hours post-dose on Days 7, 14, and 28

Notes:

[4] - The end point is not reporting statistics for all the arms in the baseline period. It is expected all the baseline period arms will be reported on when providing values for an end point on the baseline period.

Justification: Only those baseline period arms for which analysis was planned were reported in the end point.

End of dosing: Day 7 for MEDI0382 100 µg; Day 14 for MEDI0382 200 µg; and Day 28 for MEDI0382 300 µg. Clinically significant hypoglycemic range is defined as glucose levels of < 54 mg/dL (3.0 mmol/L). An ITT population was analysed which included all participants who received any dose of study drug (MEDI0382 or placebo) and analysed according to their randomized treatment group. Here, number analysed "n" signifies participants who were analysed for the specified day.

End point type	Secondary
----------------	-----------

End point timeframe:

Day -1 (Baseline) through Day 7 for MEDI0382 100 µg, Day 14 for MEDI0382 200 µg, and Day 28 for MEDI0382 300 µg

End point values	Placebo	MEDI0382		
Subject group type	Reporting group	Reporting group		
Number of subjects analysed	24	25		
Units: Percent of hypoglycemic range				
arithmetic mean (standard deviation)				
Day 7 (MEDI0382 100 µg) (n= 10, 12)	0.76 (± 3.64)	1.61 (± 5.03)		
Day 14 (MEDI0382 200 µg) (n= 9, 13)	0.27 (± 1.19)	-0.06 (± 2.18)		
Day 28 (MEDI0382 300 µg) (n= 12, 18)	-0.26 (± 0.90)	0.93 (± 4.91)		

Statistical analyses

No statistical analyses for this end point

Adverse events

Adverse events information

Timeframe for reporting adverse events:

Day -2 through 28 days post last dose (approximately 07 months)

Assessment type	Systematic

Reporting groups

Reporting group title	MEDI0382
-----------------------	----------

Reporting group description:

Participants received subcutaneous dose of MEDI0382 daily (titrated up from 100 µg for 7 days to 200 µg for 7 days and to 300 µg for 14 days) for 28 days. Participants were on metformin and dapagliflozin background dual therapy during the treatment period.

Reporting group title	Placebo
-----------------------	---------

Reporting group description:

Participants received subcutaneous dose of placebo matched to MEDI0382 daily for 28 days. Participants were on metformin and dapagliflozin background dual therapy during the treatment period.

Serious adverse events	MEDI0382	Placebo	
Total subjects affected by serious adverse events			
subjects affected / exposed	0 / 25 (0.00%)	0 / 24 (0.00%)

occurrences (all)	0	1	

More information

Substantial protocol amendments (globally)

Were there any global substantial amendments to the protocol? Yes

Date	Amendment
08 December 2017	Amended rationale for conducting the study, schedule of treatment period procedures, treatment regimen, and schedule of treatment period procedures. Updated selection of participants with type 2 diabetes mellitus with a glycated haemoglobin (Range of 7.0% to 10.0%). Added Inclusion criteria allowing participants on stable doses of metformin (maximum tolerated dose [MTD] > 1 g) with canagliflozin (maximum dose of 300 mg/day) or metformin (MTD > 1 g) with empagliflozin (maximum dose of 25 mg/day) for at least 3 months prior to screening to enter the study, after switching to dapagliflozin 10 mg at least 2 weeks prior to Day -2. Updated exclusion criterion to clarify that investigational sodium-glucose cotransporter-2 (SGLT2)-containing preparations (excluding canagliflozin and empagliflozin) within the last 30 days or 5 half-lives of the drug (whichever is longest) at the time of screening are exclusionary. Corrected schedule of run-in period procedures. Added Day -2 for training of participant on glucose and ketone monitoring. Added triglycerides test (screening only) to the serum chemistry and "Plasma glucose" was amended to "FPG". The starting point for AE and SAE collection was changed from "the time of admission to the clinic (Day -2)" to "from the time of informed consent".

Notes:

Interruptions (globally)

Were there any global interruptions to the trial? No

Limitations and caveats

None reported
