

Clinical trial results:

A prospective, multi-center, Phase 1b/2a study to assess the safety and tolerability of different doses of AG019 administered alone or in association with teplizumab in patients with clinical recent-onset Type 1 Diabetes Mellitus (T1D)

Summary

EudraCT number	2017-002871-24
Trial protocol	BE
Global end of trial date	13 October 2021

Results information

Result version number	v1
This version publication date	03 June 2022
First version publication date	03 June 2022

Paediatric regulatory details

Is trial part of an agreed paediatric investigation plan (PIP)	No
Does article 45 of REGULATION (EC) No 1901/2006 apply to this trial?	No
Does article 46 of REGULATION (EC) No 1901/2006 apply to this trial?	No

Notes:

Results analysis stage

Analysis stage	Final
Date of interim/final analysis	15 November 2021
Is this the analysis of the primary completion data?	Yes
Primary completion date	13 October 2021
Global end of trial reached?	Yes
Global end of trial date	13 October 2021
Was the trial ended prematurely?	No

Notes:

General information about the trial

Main objective of the trial:

To assess the safety and tolerability of different doses of AG019 alone as well as in association with teplizumab.

Protection of trial subjects:

Trial participants were protected by implementing safety measures for recruitment (staggered recruitment, data review by edical monitor before enrolling the next staggered patient), DSMB data review before opening the next cohort for recruitment, and close follow-up by site, medical monitor and DSMB (including scheduled data reviews).

Background therapy: -

Evidence for comparator: -

Actual start date of recruitment	20 October 2018
Long term follow-up planned	No
Independent data monitoring committee (IDMC) involvement?	Yes

Notes:

Population of trial subjects

Subjects enrolled per country

Country: Number of subjects enrolled	Belgium: 12
Country: Number of subjects enrolled	United States: 33
Worldwide total number of subjects	45
EEA total number of subjects	12

Notes:

Subjects enrolled per age group

In utero	0
Preterm newborn - gestational age < 37 wk	0
Newborns (0-27 days)	0
Infants and toddlers (28 days-23 months)	0
Children (2-11 years)	0
Adolescents (12-17 years)	19
Adults (18-64 years)	26
From 65 to 84 years	0
85 years and over	0

Subject disposition

Recruitment

Recruitment details:

AG019 monotherapy cohorts: a total of 8 single dose patients and 19 repeat dose patients

AG019/teplizumab combination cohorts: a total of 18 patients

Pre-assignment

Screening details:

Key eligibility criteria (to assess within 28d of treatment start):

- 18-40y, or 12-17y
- diagnosis of diabetes according to ADA criteria
- positive for at least 1 T1D autoantibody
- treatment to be started within 150 days of diagnosis
- at least 0.2 nmol/L of C-peptide following mixed meal tolerance test
- No active infections

Period 1

Period 1 title	overall trial (overall period)
Is this the baseline period?	Yes
Allocation method	Randomised - controlled
Blinding used	Double blind
Roles blinded	Subject, Investigator, Monitor, Data analyst, Carer, Assessor

Blinding implementation details:

The trial consisted of 2 phases.

Phase 1b was open label. 4 AG019 monotherapy cohorts were sequentially opened (ascending dose groups and descending age groups). Each cohort enrolled 2 single dose patients and up to 6 repeat dose patients.

Phase 2a was double blind (randomization ratio 4:1). 2 AG019/teplizumab combination cohorts were sequentially opened (descending age groups). In each cohort, 2 open label patients were enrolled prior to opening the double blind portion.

Arms

Are arms mutually exclusive?	No
Arm title	PHASE 1B - Single Low Dose - Adult

Arm description:

2 adults (18-40y) were enrolled in a staggered way and were treated for one day with the low dose of AG019 (1 capsule in the morning and one capsule in the evening). Patients were treated for one day and followed up for an additional 3 days, to monitor for safety and tolerability. After completion of the first single dose patient, the medical monitor reviewed the data prior to allowing enrollment of the second single dose patient.

After completion of the second single dose patient, the medical monitor reviewed all available data prior to allowing enrollment in the Adult Repeat Low Dose cohort to begin.

Single dose patients were offered the option of being re-enrolled as repeat dose patients in the same dose and age cohort.

Arm type	Experimental
Investigational medicinal product name	AG019 Single Low Dose
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Gastro-resistant capsule, hard
Routes of administration	Oral use

Dosage and administration details:

In this arm, AG019 was administered as a single low dose (one-day dosing; one capsule in the morning and one capsule in the evening). Capsules were to be taken approximately 30-60 minutes before breakfast and dinner, respectively. Capsules were taken with an adequate volume of water, and were not to be damaged, opened or chewed.

Arm title	PHASE 1B - Single High Dose - Adult
------------------	-------------------------------------

Arm description:

2 adults (18-40y) were enrolled in a staggered way and were treated for one day with the high dose of AG019 (3 capsules in the morning and 3 capsules in the evening). Patients were treated for one day and followed up for an additional 3 days, to monitor for safety and tolerability.

After completion of the first single dose patient, the medical monitor reviewed the data prior to allowing enrollment of the second single dose patient.

After completion of the second single dose patient, the medical monitor reviewed all available data prior to allowing enrollment in the Adult Repeat High Dose cohort to begin.

Single dose patients were offered the option of being re-enrolled as repeat dose patients in the same dose and age cohort.

Arm type	Experimental
Investigational medicinal product name	AG019 Single High Dose
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Gastro-resistant capsule, hard
Routes of administration	Oral use

Dosage and administration details:

In this arm, AG019 was administered as a single high dose (one-day dosing; 3 capsules in the morning and 3 capsules in the evening). Capsules were to be taken approximately 30-60 minutes before breakfast and dinner, respectively. Capsules were taken with an adequate volume of water, and were not to be damaged, opened or chewed.

Arm title	PHASE 1B - Repeat Low Dose - Adult
------------------	------------------------------------

Arm description:

In this arm, 4 newly identified repeat low dose adult (18-42y) patients were enrolled. In addition, one of the 2 single low dose adult patients was re-enrolled in this repeat dose cohort, totalling the number of patients in this cohort to 5.

All patients were treated with a repeated low dose of AG019 (1 capsule in the morning and 1 capsule in the evening, daily for 8 weeks), and followed up for another 10 months after treatment completion (total duration of participation: 12 months).

The first 2 patients were enrolled in a staggered way. Data review after the 7-day follow-up visit (one week after treatment start) was conducted before enrolling the next patient(s).

After the 7-day follow-up visit of the last enrolled patient, all available data from all cohorts was reviewed by the DSMB, prior to opening the next cohort for enrollment.

Arm type	Experimental
Investigational medicinal product name	AG019 Repeat Low Dose
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Gastro-resistant capsule, hard
Routes of administration	Oral use

Dosage and administration details:

In this arm, AG019 was administered as a repeated low dose (8-week dosing; one capsule in the morning and one capsule in the evening). Capsules were to be taken approximately 30-60 minutes before breakfast and dinner, respectively. Capsules were taken with an adequate volume of water, and were not to be damaged, opened or chewed.

Arm title	PHASE 1B - Repeat High Dose - Adult
------------------	-------------------------------------

Arm description:

In this arm, 4 newly identified repeat high dose adult (18-40y) patients were enrolled. In addition, one of the 2 single high dose adult patients was re-enrolled in this repeat dose cohort, totalling the number of patients in this cohort to 5.

All patients were treated with a repeated high dose of AG019 (3 capsules in the morning and 3 capsules in the evening, daily for 8 weeks), and followed up for another 10 months after treatment completion (total duration of participation: 12 months).

The first 2 patients were enrolled in a staggered way. Data review after the 7-day follow-up visit (one week after treatment start) was conducted before enrolling the next patient(s).

After the 7-day follow-up visit of the last enrolled patient, all available data from all cohorts was reviewed by the DSMB, prior to opening the next cohort for enrollment.

Arm type	Experimental
----------	--------------

Investigational medicinal product name	AG019 Repeat High Dose
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Gastro-resistant capsule, hard
Routes of administration	Oral use

Dosage and administration details:

In this arm, AG019 was administered as a repeated high dose (8-week dosing; 3 capsules in the morning and 3 capsules in the evening). Capsules were to be taken approximately 30-60 minutes before breakfast and dinner, respectively. Capsules were taken with an adequate volume of water, and were not to be damaged, opened or chewed.

Arm title	PHASE 1B - Single Low Dose - Adolescent
------------------	---

Arm description:

2 adolescents (12-17y) were enrolled in a staggered way and were treated for one day with the low dose of AG019 (1 capsule in the morning and one capsule in the evening). Patients were treated for one day and followed up for an additional 3 days, to monitor for safety and tolerability. After completion of the first single dose patient, the medical monitor reviewed the data prior to allowing enrollment of the second single dose patient.

After completion of the second single dose patient, the medical monitor reviewed all available data prior to allowing enrollment in the Adolescent Repeat Low Dose cohort to begin.

Single dose patients were offered the option of being re-enrolled as repeat dose patients in the same dose and age cohort.

Arm type	Experimental
Investigational medicinal product name	AG019 Single Low Dose
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Gastro-resistant capsule, hard
Routes of administration	Oral use

Dosage and administration details:

In this arm, AG019 was administered as a single low dose (one-day dosing; one capsule in the morning and one capsule in the evening). Capsules were to be taken approximately 30-60 minutes before breakfast and dinner, respectively. Capsules were taken with an adequate volume of water, and were not to be damaged, opened or chewed.

Arm title	PHASE 1B - Single High Dose - Adolescent

All patients were treated with a repeated high dose of AG019 (3 capsules in the morning and 3 capsules in the evening, daily for 8 weeks), and followed up for another 10 months after treatment completion (total duration of participation: 12 months).

The first 2 patients were enrolled in a staggered way. Data review after the 7-day follow-up visit (one week after treatment start) was conducted before enrolling the next patient(s).

After the 7-day follow-up visit of the last enrolled patient, all available data from all cohorts was reviewed by the DSMB, prior to opening the next cohort for enrollment.

Arm type	Experimental
Investigational medicinal product name	AG019 Repeat High Dose
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Gastro-resistant capsule, hard
Routes of administration	Oral use

Dosage and administration details:

In this arm, AG019 was administered as a repeated high dose (8-week dosing; 3 capsules in the morning and 3 capsules in the evening). Capsules were to be taken approximately 30-60 minutes before breakfast and dinner, respectively. Capsules were taken with an adequate volume of water, and were not to be damaged, opened or chewed.

Arm title	PHASE 2A - Active AG019/teplizumab - Adults
------------------	---

Arm description:

A total of 10 adult (18-40y) patients was enrolled into this arm.

The first 2 patients in the overall Adult AG019/teplizumab combination cohort were enrolled in a staggered way, and were treated in an open-label fashion with active AG019 and active teplizumab.

Patients were treated with active AG019 (3 capsules in the morning and 3 capsules in the evening, daily for 8 weeks) and active teplizumab (12 daily IV infusions during the first 12 days of AG019 treatment).

After the Day 12 follow-up visit of the first staggered patient (completion of the teplizumab infusion cycle), the data was reviewed by the medical monitor before allowing enrollment of the second staggered patient.

After the Day 12 follow-up visit of the second staggered patient (completion of the teplizumab infusion cycle), all data from all cohorts was reviewed by the DSMB before allowing enrollment of the remaining double-blind patients (randomization ratio 4:1; 8 active and 2 placebo).

Arm type	Experimental
----------	--------------

Investigational medicinal product name	AG019 Repeat High Dose
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Gastro-resistant capsule, hard
Routes of administration	Oral use

Dosage and administration details:

In this arm, AG019 was administered as a repeated high dose (8-week dosing; 3 capsules in the morning and 3 capsules in the evening). Capsules were to be taken approximately 30-60 minutes before breakfast and dinner, respectively. Capsules were taken with an adequate volume of water, and were not to be damaged, opened or chewed.

Investigational medicinal product name	Teplizumab
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Concentrate for dispersion for infusion
Routes of administration	Infusion , Intravenous use

Dosage and administration details:

Teplizumab was administered as a 12-day infusion cycle, during the first 12 days of AG019 treatment. Infusion volumes were calculated, based upon the patient's body surface area (BSA) and using the Mosteller formula, according to the following regimen:

- Day 1: 106 µg/m²
- Day 2: 425 µg/m²
- Day 3-12: 850 µg/m²

Arm title	PHASE 2A - AG019-placebo/teplizumab-placebo - Adults
------------------	--

Arm description:

As part of the double-blind portion of the overall Adult AG019/teplizumab combination cohort, 2 patients were randomized to receive AG019-placebo and teplizumab-placebo.

Patients were treated with AG019-placebo (3 capsules in the morning and 3 capsules in the evening, daily for 8 weeks) and teplizumab-placebo (12 daily IV infusions during the first 12 days of AG019 treatment).

All patients were followed up for a total of 12 months (8 weeks of treatment plus 10 months of post treatment follow-up).

Arm type	Placebo
Investigational medicinal product name	AG019-Placebo
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Gastro-resistant capsule, hard
Routes of administration	Oral use

Dosage and administration details:

In this arm, AG019-placebo was administered for 8 weeks at a daily dose of 3 capsules in the morning and 3 capsules in the evening. Capsules were to be taken approximately 30-60 minutes before breakfast and dinner, respectively. Capsules were taken with an adequate volume of water, and were not to be damaged, opened or chewed.

Investigational medicinal product name	Teplizumab-placebo
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Concentrate for dispersion for infusion
Routes of administration	Infusion , Intravenous use

Dosage and administration details:

Teplizumab-placebo was administered as a 12-day infusion cycle, during the first 12 days of AG019-placebo treatment. Infusion volumes were calculated, based upon the patient's body surface area (BSA) and using the Mosteller formula, according to the following regimen:

- Day 1: 106 µg/m²
- Day 2: 425 µg/m²
- Day 3-12: 850 µg/m²

Note: teplizumab-placebo did not contain active ingredient, but as the double-blind placebo vials were formulated in an identical way as the active treatment, identical calculations were used to determine the

Arm title	PHASE 2A - Active AG019/teplizumab - Adolescents
------------------	--

Arm description:

5 adolescent (12-17y) patients were enrolled into this arm.

The first 2 patients in the overall Adolescent AG019/teplizumab combination cohort were enrolled in a staggered way, and were treated in an open-label fashion with active AG019 and active teplizumab. Patients were treated with active AG019 (3 capsules in the morning and 3 capsules in the evening, daily for 8 weeks) and active teplizumab (12 daily IV infusions during the first 12 days of AG019 treatment). After the Day 12 follow-up visit of the first staggered patient (completion of the teplizumab infusion cycle), the data was reviewed by the medical monitor.

After the Day 12 follow-up visit of the second staggered patient (completion of the teplizumab infusion cycle), all data from all cohorts was reviewed by the DSMB before allowing enrollment of the remaining double-blind patients. Note: due to the COVID-19 pandemic, the Sponsor decided to terminate recruitment after enrolment of 5 active patients and 1 placebo patient

Arm type	Experimental
Investigational medicinal product name	AG019 Repeat High Dose
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Gastro-resistant capsule, hard
Routes of administration	Oral use

Dosage and administration details:

In this arm, AG019 was administered as a repeated high dose (8-week dosing; 3 capsules in the morning and 3 capsules in the evening). Capsules were to be taken approximately 30-60 minutes before breakfast and dinner, respectively. Capsules were taken with an adequate volume of water, and were not to be damaged, opened or chewed.

Investigational medicinal product name	Teplizumab
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Concentrate for dispersion for infusion
Routes of administration	Infusion , Intravenous use

Dosage and administration details:

Teplizumab was administered as a 12-day infusion cycle, during the first 12 days of AG019 treatment. Infusion volumes were calculated, based upon the patient's body surface area (BSA) and using the Mosteller formula, according to the following regimen:

- Day 1: 106 µg/m²
- Day 2: 425 µg/m²
- Day 3-12: 850 µg/m²

Arm title	PHASE 2A - AG019-placebo/teplizumab-placebo - Adolescents
------------------	---

Arm description:

As part of the double-blind portion of the overall Adolescent AG019/teplizumab combination cohort, 1 patient was randomized to receive AG019-placebo and teplizumab-placebo.

Patients were treated with AG019-placebo (3 capsules in the morning and 3 capsules in the evening, daily for 8 weeks) and teplizumab-placebo (12 daily IV infusions during the first 12 days of AG019 - placebo treatment).

Follow-up was planned till 12 months (8 weeks of treatment plus 10 months of post treatment follow-up), however, the patient was lost to follow-up after the 9 months follow-up visit.

Note: due to the COVID-19 pandemic, the Sponsor decided to terminate recruitment in the overall Adolescent AG019/teplizumab combination cohort after enrollment of a total of 5 active patients and 1 placebo patient.

Arm type	Placebo

Reporting group description:

In this arm, 4 newly identified repeat low dose adolescent (12-17y) patients were enrolled. None of the 2 single low dose adolescent patients was re-enrolled in this repeat dose cohort, totalling the number of patients in this cohort to 4.

All patients were treated with a repeated low dose of AG019 (1 capsule in the morning and 1 capsule in the evening, daily for 8 weeks), and followed up for another 10 months after treatment completion (total duration of participation: 12 months).

The first 2 patients were enrolled in a staggered way. Data review after the 7-day follow-up visit (one week after treatment start) was conducted before enrolling the next patient(s).

After the 7-day follow-up visit of the last enrolled patient, all available data from all cohorts was reviewed by the DSMB, prior to opening the next cohort for enrollment.

Reporting group title	PHASE 1B - Repeat High Dose - Adolescent
-----------------------	--

Reporting group description:

In this arm, 4 newly identified repeat high dose adolescent (12-17y) patients were enrolled. In addition, one of the 2 single high dose adolescent patients was re-enrolled in this repeat dose cohort, totalling the number of patients in this cohort to 5.

All patients were treated with a repeated high dose of AG019 (3 capsules in the morning and 3 capsules in the evening, daily for 8 weeks), and followed up for another 10 months after treatment completion (total duration of participation: 12 months).

The first 2 patients were enrolled in a staggered way. Data review after the 7-day follow-up visit (one week after treatment start) was conducted before enrolling the next patient(s).

After the 7-day follow-up visit of the last enrolled patient, all available data from all cohorts was reviewed by the DSMB, prior to opening the next cohort for enrollment.

Reporting group title	PHASE 2A - Active AG019/teplizumab - Adults
-----------------------	---

Reporting group description:

A total of 10 adult (18-40y) patients was enrolled into this arm.

The first 2 patients in the overall Adult AG019/teplizumab combination cohort were enrolled in a staggered way, and were treated in an open-label fashion with active AG019 and active teplizumab.

Patients were treated with active AG019 (3 capsules in the morning and 3 capsules in the evening, daily for 8 weeks) and active teplizumab (12 daily IV infusions during the first 12 days of AG019 treatment).

After the Day 12 follow-up visit of the first staggered patient (completion of the teplizumab infusion cycle), the data was reviewed by the medical monitor before allowing enrollment of the second staggered patient.

After the Day 12 follow-up visit of the second staggered patient (completion of the teplizumab infusion cycle), all data from all cohorts was reviewed by the DSMB before allowing enrollment of the remaining double-blind patients (randomization ratio 4:1; 8 active and 2 placebo).

Reporting group title	PHASE 2A - AG019-placebo/teplizumab-placebo - Adults
-----------------------	--

Reporting group description:

As part of the double-blind portion of the overall Adult AG019/teplizumab combination cohort, 2 patients were randomized to receive AG019-placebo and teplizumab-placebo.

Patients were treated with AG019-placebo (3 capsules in the morning and 3 capsules in the evening, daily for 8 weeks) and teplizumab-placebo (12 daily IV infusions during the first 12 days of AG019 treatment).

All patients were followed up for a total of 12 months (8 weeks of treatment plus 10 months of post treatment follow-up).

Reporting group title	PHASE 2A - Active AG019/teplizumab - Adolescents
-----------------------	--

Reporting group description:

5 adolescent (12-17y) patients were enrolled into this arm.

The first 2 patients in the overall Adolescent AG019/teplizumab combination cohort were enrolled in a staggered way, and were treated in an open-label fashion with active AG019 and active teplizumab. Patients were treated with active AG019 (3 capsules in the morning and 3 capsules in the evening, daily for 8 weeks) and active teplizumab (12 daily IV infusions during the first 12 days of AG019 treatment). After the Day 12 follow-up visit of the first staggered patient (completion of the teplizumab infusion cycle), the data was reviewed by the medical monitor. After the Day 12 follow-up visit of the second staggered patient (completion of the teplizumab infusion cycle), all data from all cohorts was reviewed by the DSMB before allowing enrollment of the remaining double-blind patients. Note: due to the COVID-19 pandemic, the Sponsor decided to terminate recruitment after enrolment of 5 active patients and 1 placebo patient

Reporting group title	PHASE 2A - AG019-placebo/teplizumab-placebo - Adolescents
-----------------------	---

Reporting group description:

As part of the double-blind portion of the overall Adolescent AG019/teplizumab combination cohort, 1 patient was randomized to receive AG019-placebo and teplizumab-placebo.

Patients were treated with AG019-placebo (3 capsules in the morning and 3 capsules in the evening, daily for 8 weeks) and teplizumab-placebo (12 daily IV infusions during the first 12 days of AG019 - placebo treatment).

Follow-up was planned till 12 months (8 weeks of treatment plus 10 months of post treatment follow-up), however, the patient was lost to follow-up after the 9 months follow-up visit.

Note: due to the COVID-19 pandemic, the Sponsor decided to terminate recruitment in the overall Adolescent AG019/teplizumab combination cohort after enrollment of a total of 5 active patients and 1 placebo patient.

End points reporting groups

Reporting group title	PHASE 1B - Single Low Dose - Adult
Reporting group description: 2 adults (18-40y) were enrolled in a staggered way and were treated for one day with the low dose of AG019 (1 capsule in the morning and one capsule in the evening). Patients were treated for one day and followed up for an additional 3 days, to monitor for safety and tolerability. After completion of the first single dose patient, the medical monitor reviewed the data prior to allowing enrollment of the second single dose patient. After completion of the second single dose patient, the medical monitor reviewed all available data prior to allowing enrollment in the Adult Repeat Low Dose cohort to begin. Single dose patients were offered the option of being re-enrolled as repeat dose patients in the same dose and age cohort.	
Reporting group title	PHASE 1B - Single High Dose - Adult
Reporting group description: 2 adults (18-40y) were enrolled in a staggered way and were treated for one day with the high dose of AG019 (3 capsules in the morning and 3 capsules in the evening). Patients were treated for one day and followed up for an additional 3 days, to monitor for safety and tolerability. After completion of the first single dose patient, the medical monitor reviewed the data prior to allowing enrollment of the second single dose patient. After completion of the second single dose patient, the medical monitor reviewed all available data prior to allowing enrollment in the Adult Repeat High Dose cohort to begin. Single dose patients were offered the option of being re-enrolled as repeat dose patients in the same dose and age cohort.	
Reporting group title	PHASE 1B - Repeat Low Dose - Adult
Reporting group description: In this arm, 4 newly identified repeat low dose adult (18-42y) patients were enrolled. In addition, one of the 2 single low dose adult patients was re-enrolled in this repeat dose cohort, totalling the number of patients in this cohort to 5. All patients were treated with a repeated low dose of AG019 (1 capsule in the morning and 1 capsule in the evening, daily for 8 weeks), and followed up for another 10 months after treatment completion (total duration of participation: 12 months). The first 2 patients were enrolled in a staggered way. Data review after the 7-day follow-up visit (one week after treatment start) was conducted before enrolling the next patient(s). After the 7-day follow-up visit of the last enrolled patient, all available data from all cohorts was reviewed by the DSMB, prior to opening the next cohort for enrollment.	
Reporting group title	PHASE 1B - Repeat High Dose - Adult
Reporting group description: In this arm, 4 newly identified repeat high dose adult (18-40y) patients were enrolled. In addition, one of the 2 single high dose adult patients was re-enrolled in this repeat dose cohort, totalling the number of patients in this cohort to 5. All patients were treated with a repeated high dose of AG019 (3 capsules in the morning and 3 capsules in the evening, daily for 8 weeks), and followed up for another 10 months after treatment completion (total duration of participation: 12 months). The first 2 patients were enrolled in a staggered way. Data review after the 7-day follow-up visit (one week after treatment start) was conducted before enrolling the next patient(s). After the 7-day follow-up visit of the last enrolled patient, all available data from all cohorts was reviewed by the DSMB, prior to opening the next cohort for enrollment.	
Reporting group title	PHASE 1B - Single Low Dose - Adolescent
Reporting group description: 2 adolescents (12-17y) were enrolled in a staggered way and were treated for one day with the low dose of AG019 (1 capsule in the morning and one capsule in the evening). Patients were treated for one day and followed up for an additional 3 days, to monitor for safety and tolerability. After completion of the first single dose patient, the medical monitor reviewed the data prior to allowing enrollment of the second single dose patient. After completion of the second single dose patient, the medical monitor reviewed all available data prior to allowing enrollment in the Adolescent Repeat Low Dose cohort to begin. Single dose patients were offered the option of being re-enrolled as repeat dose patients in the same dose and age cohort.	

Reporting group title	PHASE 1B - Single High Dose - Adolescent
-----------------------	--

Reporting group description:

2 adolescents (12-17y) were enrolled in a staggered way and were treated for one day with the high dose of AG019 (3 capsules in the morning and 3 capsules in the evening). Patients were treated for one day and followed up for an additional 3 days, to monitor for safety and tolerability. After completion of the first single dose patient, the medical monitor reviewed the data prior to allowing enrollment of the second single dose patient.

After completion of the second single dose patient, the medical monitor reviewed all available data prior to allowing enrollment in the Adolescent Repeat High Dose cohort to begin.

Single dose patients were offered the option of being re-enrolled as repeat dose patients in the same dose and age cohort.

Reporting group title	PHASE 1B - Repeat Low Dose - Adolescent
-----------------------	---

Reporting group description:

In this arm, 4 newly identified repeat low dose adolescent (12-17y) patients were enrolled. None of the 2 single low dose adolescent patients was re-enrolled in this repeat dose cohort, totalling the number of patients in this cohort to 4.

All patients were treated with a repeated low dose of AG019 (1 capsule in the morning and 1 capsule in the evening, daily for 8 weeks), and followed up for another 10 months after treatment completion (total duration of participation: 12 months).

The first 2 patients were enrolled in a staggered way. Data review after the 7-day follow-up visit (one week after treatment start) was conducted before enrolling the next patient(s).

After the 7-day follow-up visit of the last enrolled patient, all available data from all cohorts was reviewed by the DSMB, prior to opening the next cohort for enrollment.

Reporting group title	PHASE 1B - Repeat High Dose - Adolescent
-----------------------	--

Reporting group description:

In this arm, 4 newly identified repeat high dose adolescent (12-17y) patients were enrolled. In addition, one of the 2 single high dose adolescent patients was re-enrolled in this repeat dose cohort, totalling the number of patients in this cohort to 5.

All patients were treated with a repeated high dose of AG019 (3 capsules in the morning and 3 capsules in the evening, daily for 8 weeks), and followed up for another 10 months after treatment completion (total duration of participation: 12 months).

The first 2 patients were enrolled in a staggered way. Data review after the 7-day follow-up visit (one week after treatment start) was conducted before enrolling the next patient(s).

After the 7-day follow-up visit of the last enrolled patient, all available data from all cohorts was reviewed by the DSMB, prior to opening the next cohort for enrollment.

Reporting group title	PHASE 2A - Active AG019/teplizumab - Adults
-----------------------	---

Reporting group description:

A total of 10 adult (18-40y) patients was enrolled into this arm.

The first 2 patients in the overall Adult AG019/teplizumab combination cohort were enrolled in a staggered way, and were treated in an open-label fashion with active AG019 and active teplizumab.

Patients were treated with active AG019 (3 capsules in the morning and 3 capsules in the evening, daily for 8 weeks) and active teplizumab (12 daily IV infusions during the first 12 days of AG019 treatment).

After the Day 12 follow-up visit of the first staggered patient (completion of the teplizumab infusion cycle), the data was reviewed by the medical monitor before allowing enrollment of the second staggered patient.

After the Day 12 follow-up visit of the second staggered patient (completion of the teplizumab infusion cycle), all data from all cohorts was reviewed by the DSMB before allowing enrollment of the remaining double-blind patients (randomization ratio 4:1; 8 active and 2 placebo).

Reporting group title	PHASE 2A - AG019-placebo/teplizumab-placebo - Adults
-----------------------	--

Reporting group description:

As part of the double-blind portion of the overall Adult AG019/teplizumab combination cohort, 2 patients were randomized to receive AG019-placebo and teplizumab-placebo.

Patients were treated with AG019-placebo (3 capsules in the morning and 3 capsules in the evening, daily for 8 weeks) and teplizumab-placebo (12 daily IV infusions during the first 12 days of AG019 treatment).

All patients were followed up for a total of 12 months (8 weeks of treatment plus 10 months of post treatment follow-up).

Reporting group title	PHASE 2A - Active AG019/teplizumab - Adolescents
-----------------------	--

Reporting group description:

5 adolescent (12-17y) patients were enrolled into this arm.

The first 2 patients in the overall Adolescent AG019/teplizumab combination cohort were enrolled in a staggered way, and were treated in an open-label fashion with active AG019 and active teplizumab. Patients were treated with active AG019 (3 capsules in the morning and 3 capsules in the evening, daily for 8 weeks) and active teplizumab (12 daily IV infusions during the first 12 days of AG019 treatment). After the Day 12 follow-up visit of the first staggered patient (completion of the teplizumab infusion cycle), the data was reviewed by the medical monitor. After the Day 12 follow-up visit of the second staggered patient (completion of the teplizumab infusion cycle), all data from all cohorts was reviewed by the DSMB before allowing enrollment of the remaining double-blind patients. Note: due to the COVID-19 pandemic, the Sponsor decided to terminate recruitment after enrolment of 5 active patients and 1 placebo patient

Reporting group title	PHASE 2A - AG019-placebo/teplizumab-placebo - Adolescents
-----------------------	---

Reporting group description:

As part of the double-blind portion of the overall Adolescent AG019/teplizumab combination cohort, 1 patient was randomized to receive AG019-placebo and teplizumab-placebo.

Patients were treated with AG019-placebo (3 capsules in the morning and 3 capsules in the evening, daily for 8 weeks) and teplizumab-placebo (12 daily IV infusions during the first 12 days of AG019 - placebo treatment).

Follow-up was planned till 12 months (8 weeks of treatment plus 10 months of post treatment follow-up), however, the patient was lost to follow-up after the 9 months follow-up visit.

Note: due to the COVID-19 pandemic, the Sponsor decided to terminate recruitment in the overall Adolescent AG019/teplizumab combination cohort after enrollment of a total of 5 active patients and 1 placebo patient.

Subject analysis set title	Safety Analysis Set
----------------------------	---------------------

Subject analysis set type	Safety analysis
---------------------------	-----------------

Subject analysis set description:

The safety population will include all patients who received at least one dose of AG019. Only patients with clear documentation that no study medication was received may be excluded from analysis.

Patients were analyzed according to dose received. This population is used for all data summaries.

Subject analysis set title	PD-ITT
----------------------------	--------

Subject analysis set type	Sub-group analysis
---------------------------	--------------------

Subject analysis set description:

The Pharmacodynamic Intention To Treat (PD-ITT) Analysis Set. All patients in the repeat dose and combination cohorts who received at least one dose of AG019 were included in the PD-ITT analysis set.

Subject analysis set title	PD-PP
----------------------------	-------

Subject analysis set type	Sub-group analysis
---------------------------	--------------------

Subject analysis set description:

The Pharmacodynamic Per Protocol (PD-PP) Analysis Set. All data from patients in the repeat dose and combination cohorts who received at least 75% of the scheduled doses of AG019 and at least one dose of teplizumab in the combination cohorts and had no major protocol deviations affecting the main PD endpoints at the time point of data collection were included in the PD-PP analysis set.

Refer to the SAP for details on compliance calculation and designation of major PDs affecting the main PD endpoints.

Subject analysis set title	PK-ITT
----------------------------	--------

Subject analysis set type	Sub-group analysis
---------------------------	--------------------

Subject analysis set description:

The Pharmacokinetic Intention To Treat (PK-ITT) Analysis Set. All patients in the repeat dose and combination cohorts who received at least one dose of AG019 were included in the PK-ITT analysis set.

Subject analysis set title	PK-PP
----------------------------	-------

Subject analysis set type	Sub-group analysis
---------------------------	--------------------

Subject analysis set description:

The Pharmacokinetic Per Protocol (PK-PP) Analysis Set. All data from patients in the repeat dose and combination cohorts who received at least 75% of the scheduled doses of AG019 and at least one dose of teplizumab in the combination cohorts and had no major protocol deviations affecting the main PK endpoints at the time point of data collection are included in the PK-PP analysis set.

Primary: incidence of treatment emergent adverse events up to 6 months

End point title	incidence of treatment emergent adverse events up to 6 months ^[1]
-----------------	--

End point description:

The incidence of TEAE reported up to the 6-month follow-up visit. The TEAE are counted once within each patient on the preferred term level.

End point type	Primary

Adverse events

Adverse events information

Timeframe for reporting adverse events:

Adverse events are collected from signature of informed consent until completion of the study (or premature withdrawal).

Adverse event reporting additional description:

All adverse events are listed, regardless of treatment emergence, severity, or relationship to AG019 or teplizumab. The results of the primary endpoint (incidence of TEAE up to 6 months) are outlined in the Endpoints section.

Assessment type	Systematic

Reporting groups

Reporting group title	PHASE 1B - Single Low Dose - Adult
-----------------------	------------------------------------

Reporting group description:

2 adults (18-40y) were enrolled in a staggered way and were treated for one day with the low dose of AG019 (1 capsule in the morning and one capsule in the evening). Patients were treated for one day and followed up for an additional 3 days, to monitor for safety and tolerability. After completion of the first single dose patient, the medical monitor reviewed the data prior to allowing enrollment of the second single dose patient.

After completion of the second single dose patient, the medical monitor reviewed all available data prior to allowing enrollment in the Adult Repeat Low Dose cohort to begin.

Single dose patients were offered the option of being re-enrolled as repeat dose patients in the same dose and age cohort.

Reporting group title	PHASE 1B - Single High Dose - Adult
-----------------------	-------------------------------------

Reporting group description:

2 adults (18-40y) were enrolled in a staggered way and were treated for one day with the high dose of AG019 (3 capsules in the morning and 3 capsules in the evening). Patients were treated for one day and followed up for an additional 3 days, to monitor for safety and tolerability.

After completion of the first single dose patient, the medical monitor reviewed the data prior to allowing enrollment of the second single dose patient.

After completion of the second single dose patient, the medical monitor reviewed all available data prior to allowing enrollment in the Adult Repeat High Dose cohort to begin.

Single dose patients were offered the option of being re-enrolled as repeat dose patients in the same dose and age cohort.

Reporting group title	PHASE 1B - Repeat Low Dose - Adult
-----------------------	------------------------------------

Reporting group description:

In this arm, 4 newly identified repeat low dose adult (18-42y) patients were enrolled. In addition, one of the 2 single low dose adult patients was re-enrolled in this repeat dose cohort, totalling the number of patients in this cohort to 5.

All patients were treated with a repeated low dose of AG019 (1 capsule in the morning and 1 capsule in the evening, daily for 8 weeks), and followed up for another 10 months after treatment completion (total duration of participation: 12 months).

The first 2 patients were enrolled in a staggered way. Data review after the 7-day follow-up visit (one week after treatment start) was conducted before enrolling the next patient(s).

After the 7-day follow-up visit of the last enrolled patient, all available data from all cohorts was reviewed by the DSMB, prior to opening the next cohort for enrollment.

Reporting group title	PHASE 1B - Repeat High Dose - Adult
-----------------------	-------------------------------------

Reporting group description:

In this arm, 4 newly identified repeat high dose adult (18-40y) patients were enrolled. In addition, one of the 2 single high dose adult patients was re-enrolled in this repeat dose cohort, totalling the number of patients in this cohort to 5.

All patients were treated with a repeated high dose of AG019 (3 capsules in the morning and 3 capsules in the evening, daily for 8 weeks), and followed up for another 10 months after treatment completion (total duration of participation: 12 months).

The first 2 patients were enrolled in a staggered way. Data review after the 7-day follow-up visit (one week after treatment start) was conducted before enrolling the next patient(s).

After the 7-day follow-up visit of the last enrolled patient, all available data from all cohorts was

reviewed by the DSMB, prior to opening the next cohort for enrollment.

Reporting group title	PHASE 1B - Single Low Dose - Adolescent
-----------------------	---

Reporting group description:

2 adolescents (12-17y) were enrolled in a staggered way and were treated for one day with the low dose of AG019 (1 capsule in the morning and one capsule in the evening). Patients were treated for one day and followed up for an additional 3 days, to monitor for safety and tolerability. After completion of the first single dose patient, the medical monitor reviewed the data prior to allowing enrollment of the second single dose patient.

After completion of the second single dose patient, the medical monitor reviewed all available data prior to allowing enrollment in the Adolescent Repeat Low Dose cohort to begin.

Single dose patients were offered the option of being re-enrolled as repeat dose patients in the same dose and age cohort.

Reporting group title	PHASE 1B - Single High Dose - Adolescent
-----------------------	--

Reporting group description:

2 adolescents (12-17y) were enrolled in a staggered way and were treated for one day with the high dose of AG019 (3 capsules in the morning and 3 capsules in the evening). Patients were treated for one day and followed up for an additional 3 days, to monitor for safety and tolerability. After completion of the first single dose patient, the medical monitor reviewed the data prior to allowing enrollment of the second single dose patient.

After completion of the second single dose patient, the medical monitor reviewed all available data prior to allowing enrollment in the Adolescent Repeat High Dose cohort to begin.

Single dose patients were offered the option of being re-enrolled as repeat dose patients in the same dose and age cohort.

Reporting group title	PHASE 1B - Repeat Low Dose - Adolescent
-----------------------	---

Reporting group description:

In this arm, 4 newly identified repeat low dose adolescent (12-17y) patients were enrolled. None of the 2 single low dose adolescent patients was re-enrolled in this repeat dose cohort, totalling the number of patients in this cohort to 4.

All patients were treated with a repeated low dose of AG019 (1 capsule in the morning and 1 capsule in the evening, daily for 8 weeks), and followed up for another 10 months after treatment completion (total duration of participation: 12 months).

The first 2 patients were enrolled in a staggered way. Data review after the 7-day follow-up visit (one week after treatment start) was conducted before enrolling the next patient(s).

After the 7-day follow-up visit of the last enrolled patient, all available data from all cohorts was reviewed by the DSMB, prior to opening the next cohort for enrollment.

Reporting group title	PHASE 1B - Repeat High Dose - Adolescent
-----------------------	--

Reporting group description:

In this arm, 4 newly identified repeat high dose adolescent (12-17y) patients were enrolled. In addition, one of the 2 single high dose adolescent patients was re-enrolled in this repeat dose cohort, totalling the number of patients in this cohort to 5.

All patients were treated with a repeated high dose of AG019 (3 capsules in the morning and 3 capsules in the evening, daily for 8 weeks), and followed up for another 10 months after treatment completion (total duration of participation: 12 months).

The first 2 patients were enrolled in a staggered way. Data review after the 7-day follow-up visit (one week after treatment start) was conducted before enrolling the next patient(s).

After the 7-day follow-up visit of the last enrolled patient, all available data from all cohorts was reviewed by the DSMB, prior to opening the next cohort for enrollment.

Reporting group title	PHASE 2A - Active AG019/teplizumab - Adults
-----------------------	---

Reporting group description:

A total of 10 adult (18-40y) patients was enrolled into this arm.

The first 2 patients in the overall Adult AG019/teplizumab combination cohort were enrolled in a staggered way, and were treated in an open-label fashion with active AG019 and active teplizumab. Patients were treated with active AG019 (3 capsules in the morning and 3 capsules in the evening, daily for 8 weeks) and active teplizumab (12 daily IV infusions during the first 12 days of AG019 treatment). After the Day 12 follow-up visit of the first staggered patient (completion of the teplizumab infusion cycle), the data was reviewed by the medical monitor before allowing enrollment of the second staggered patient.

After the Day 12 follow-up visit of the second staggered patient (completion of the teplizumab infusion cycle), all data from all cohorts was reviewed by the DSMB before allowing enrollment of the remaining double-blind patients (randomization ratio 4:1; 8 active and 2 placebo).

Reporting group title	PHASE 2A - AG019-placebo/teplizumab-placebo - Adults
-----------------------	--

Reporting group description:

As part of the double-blind portion of the overall Adult AG019/teplizumab combination cohort, 2 patients were randomized to receive AG019-placebo and teplizumab-placebo.

Patients were treated with AG019-placebo (3 capsules in the morning and 3 capsules in the evening, daily for 8 weeks) and teplizumab-placebo (12 daily IV infusions during the first 12 days of AG019 treatment).

All patients were followed up for a total of 12 months (8 weeks of treatment plus 10 months of post treatment follow-up).

Reporting group title	PHASE 2A - Active AG019/teplizumab - Adolescents
-----------------------	--

Reporting group description:

10 adolescent (12-17y) patients was enrolled into this arm.

The first 2 patients in the overall Adolescent AG019/teplizumab combination cohort were enrolled in a staggered way, and were treated in an open-label fashion with active AG019 and active teplizumab.

Patients were treated with active AG019 (3 capsules in the morning and 3 capsules in the evening, daily for 8 weeks) and active teplizumab (12 daily IV infusions during the first 12 days of AG019 treatment).

After the Day 12 follow-up visit of the first staggered patient (completion of the teplizumab infusion cycle), the data was reviewed by the .medical monitor.

After the Day 12 follow-up visit of the second staggered patient (completion of the teplizumab infusion cycle), all data from all cohorts was reviewed by the DSMB before allowing enrollment of the remaining double-blind patients. Note: due to the COVID-19 pandemic, the Sponsor decided to terminate recruitment after enrolment of 6 active patients and 1 placebo patient

Reporting group title	PHASE 2A - AG019-placebo/teplizumab-placebo - Adolescents
-----------------------	---

Reporting group description:

As part of the double-blind portion of the overall Adolescent AG019/teplizumab combination cohort, 2 patients were randomized to receive AG019-placebo and teplizumab-placebo.

Patients were treated with AG019-placebo (3 capsules in the morning and 3 capsules in the evening, daily for 8 weeks) and teplizumab-placebo (12 daily IV infusions during the first 12 days of AG019 treatment).

All patients were followed up for a total of 12 months (8 weeks of treatment plus 10 months of post treatment follow-up).

Note: due to the COVID-19 pandemic, the Sponsor decided to terminate recruitment in the overall Adolescent AG019/teplizumab combination cohort after enrollment of a total of 6 active patients and 1 placebo patient.

subjects affected / exposed	1 / 2 (50.00%)	2 / 2 (100.00%)	5 / 5 (100.00%)
Vascular disorders			
Pallor			
subjects affected / exposed	0 / 2 (0.00%)	0 / 2 (0.00%)	0 / 5 (0.00%)
occurrences (all)	0	0	0
General disorders and administration site conditions			
Administration site pain			
subjects affected / exposed	0 / 2 (0.00%)	0 / 2 (0.00%)	0 / 5 (0.00%)
occurrences (all)	0	0	0
Catheter site pain			
subjects affected / exposed	0 / 2 (0.00%)	0 / 2 (0.00%)	0 / 5 (0.00%)
occurrences (all)	0	0	0
Catheter site pruritus			
subjects affected / exposed	0 / 2 (0.00%)	0 / 2 (0.00%)	0 / 5 (0.00%)
occurrences (all)	0	0	0
Catheter site related reaction			
subjects affected / exposed	0 / 2 (0.00%)	0 / 2 (0.00%)	0 / 5 (0.00%)
occurrences (all)	0	0	0
Chest pain			

subjects affected / exposed	0 / 2 (0.00%)	0 / 2 (0.00%)	0 / 5 (0.00%)
occurrences (all)	0	0	0
Chills			
subjects affected / exposed	0 / 2 (0.00%)	0 / 2 (0.00%)	0 / 5 (0.00%)
occurrences (all)	0	0	0
Fatigue			
subjects affected / exposed	0 / 2 (0.00%)	0 / 2 (0.00%)	0 / 5 (0.00%)
occurrences (all)	0	0	0
Influenza like illness			
subjects affected / exposed	0 / 2 (0.00%)	0 / 2 (0.00%)	1 / 5 (20.00%)
occurrences (all)	0	0	1
Infusion site irritation			
subjects affected / exposed	0 / 2 (0.00%)	0 / 2 (0.00%)	0 / 5 (0.00%)
occurrences (all)	0	0	0
Non-cardiac chest pain			
subjects affected / exposed	0 / 2 (0.00%)	0 / 2 (0.00%)	0 / 5 (0.00%)
occurrences (all)	0	0	0
Pain			
subjects affected / exposed	0 / 2 (0.00%)	0 / 2 (0.00%)	0 / 5 (0.00%)
occurrences (all)	0	0	0
Pyrexia			
subjects affected / exposed	0 / 2 (0.00%)	0 / 2 (0.00%)	0 / 5 (0.00%)
occurrences (all)	0	0	0
Immune system disorders			
Cytokine release syndrome			
subjects affected / exposed	0 / 2 (0.00%)	0 / 2 (0.00%)	0 / 5 (0.00%)
occurrences (all)	0	0	0
Seasonal allergy			
subjects affected / exposed	0 / 2 (0.00%)	0 / 2 (0.00%)	0 / 5 (0.00%)
occurrences (all)	0	0	0
Selective IgA immunodeficiency			
subjects affected / exposed	0 / 2 (0.00%)	0 / 2 (0.00%)	0 / 5 (0.00%)
occurrences (all)	0	0	0
Reproductive system and breast disorders			

Dysmenorrhoea			
subjects affected / exposed	0 / 2 (0.00%)	0 / 2 (0.00%)	0 / 5 (0.00%)
occurrences (all)	0	0	0
Scrotal irritation			
subjects affected / exposed	0 / 2 (0.00%)	0 / 2 (0.00%)	0 / 5 (0.00%)
occurrences (all)	0	0	0
Vulvovaginal discomfort			
subjects affected / exposed	0 / 2 (0.00%)	0 / 2 (0.00%)	0 / 5 (0.00%)
occurrences (all)	0	0	0
Respiratory, thoracic and mediastinal disorders			
Cough			
subjects affected / exposed	0 / 2 (0.00%)	0 / 2 (0.00%)	0 / 5 (0.00%)
occurrences (all)	0	0	0
Dyspnoea exertional			
subjects affected / exposed	0 / 2 (0.00%)	0 / 2 (0.00%)	0 / 5 (0.00%)
occurrences (all)	0	0	0
Nasal congestion			
subjects affected / exposed	0 / 2 (0.00%)	0 / 2 (0.00%)	0 / 5 (0.00%)
occurrences (all)	0	0	0
Nasal discomfort			
subjects affected / exposed	0 / 2 (0.00%)	0 / 2 (0.00%)	0 / 5 (0.00%)
occurrences (all)	0	0	0
Oropharyngeal pain			
subjects affected / exposed	0 / 2 (0.00%)	0 / 2 (0.00%)	0 / 5 (0.00%)
occurrences (all)	0	0	0
Painful respiration			
subjects affected / exposed	0 / 2 (0.00%)	0 / 2 (0.00%)	0 / 5 (0.00%)
occurrences (all)	0	0	0
Productive cough			
subjects affected / exposed	0 / 2 (0.00%)	0 / 2 (0.00%)	0 / 5 (0.00%)
occurrences (all)	0	0	0
Tonsillar hypertrophy			
subjects affected / exposed	0 / 2 (0.00%)	0 / 2 (0.00%)	0 / 5 (0.00%)
occurrences (all)	0	0	0
Psychiatric disorders			

Anxiety			
subjects affected / exposed	0 / 2 (0.00%)	0 / 2 (0.00%)	0 / 5 (0.00%)
occurrences (all)	0	0	0
Attention deficit hyperactivity disorder			
subjects affected / exposed	0 / 2 (0.00%)	0 / 2 (0.00%)	0 / 5 (0.00%)
occurrences (all)	0	0	0
Depression			
subjects affected / exposed	0 / 2 (0.00%)	0 / 2 (0.00%)	0 / 5 (0.00%)
occurrences (all)	0	0	0
Panic attack			
subjects affected / exposed	0 / 2 (0.00%)	0 / 2 (0.00%)	0 / 5 (0.00%)
occurrences (all)	0	0	0
Suicidal ideation			
subjects affected / exposed	0 / 2 (0.00%)	0 / 2 (0.00%)	0 / 5 (0.00%)
occurrences (all)	0	0	0
Investigations			
Alanine aminotransferase increased			
subjects affected / exposed	0 / 2 (0.00%)	0 / 2 (0.00%)	0 / 5 (0.00%)
occurrences (all)	0	0	0
Aspartate aminotransferase increased			
subjects affected / exposed	0 / 2 (0.00%)	0 / 2 (0.00%)	0 / 5 (0.00%)
occurrences (all)	0	0	0
Blood alkaline phosphatase increased			
subjects affected / exposed	0 / 2 (0.00%)	0 / 2 (0.00%)	0 / 5 (0.00%)
occurrences (all)	0	0	0
Blood bilirubin increased			
subjects affected / exposed	0 / 2 (0.00%)	0 / 2 (0.00%)	0 / 5 (0.00%)
occurrences (all)	0	0	0
Blood glucose decreased			
subjects affected / exposed	0 / 2 (0.00%)	0 / 2 (0.00%)	0 / 5 (0.00%)
occurrences (all)	0	0	0
Blood lactate dehydrogenase increased			
subjects affected / exposed	0 / 2 (0.00%)	0 / 2 (0.00%)	0 / 5 (0.00%)
occurrences (all)	0	0	0
Blood potassium increased			

subjects affected / exposed	0 / 2 (0.00%)	0 / 2 (0.00%)	0 / 5 (0.00%)
occurrences (all)	0	0	0
Blood urea increased			
subjects affected / exposed	0 / 2 (0.00%)	0 / 2 (0.00%)	0 / 5 (0.00%)
occurrences (all)	0	0	0
Blood uric acid increased			
subjects affected / exposed	0 / 2 (0.00%)	0 / 2 (0.00%)	0 / 5 (0.00%)
occurrences (all)	0	0	0
Body temperature decreased			
subjects affected / exposed	0 / 2 (0.00%)	1 / 2 (50.00%)	0 / 5 (0.00%)
occurrences (all)	0	1	0
C-reactive protein increased			
subjects affected / exposed	0 / 2 (0.00%)	0 / 2 (0.00%)	0 / 5 (0.00%)
occurrences (all)	0	0	0
Eosinophil count increased			
subjects affected / exposed	0 / 2 (0.00%)	0 / 2 (0.00%)	0 / 5 (0.00%)
occurrences (all)	0	0	0
Epstein-Barr virus test positive			
subjects affected / exposed	0 / 2 (0.00%)	0 / 2 (0.00%)	0 / 5 (0.00%)
occurrences (all)	0	0	0
Glycosylated haemoglobin increased			
subjects affected / exposed	0 / 2 (0.00%)	0 / 2 (0.00%)	0 / 5 (0.00%)
occurrences (all)	0	0	0
International normalised ratio increased			
subjects affected / exposed	0 / 2 (0.00%)	0 / 2 (0.00%)	0 / 5 (0.00%)
occurrences (all)	0	0	0
Liver function test abnormal			
subjects affected / exposed	0 / 2 (0.00%)	0 / 2 (0.00%)	0 / 5 (0.00%)
occurrences (all)	0	0	0
Lymphocyte count decreased			
subjects affected / exposed	0 / 2 (0.00%)	0 / 2 (0.00%)	0 / 5 (0.00%)
occurrences (all)	0	0	0
Monocyte count decreased			
subjects affected / exposed	0 / 2 (0.00%)	0 / 2 (0.00%)	0 / 5 (0.00%)
occurrences (all)	0	0	0

Neutrophil count decreased subjects affected / exposed occurrences (all)	0 / 2 (0.00%) 0	0 / 2 (0.00%) 0	0 / 5 (0.00%) 0
Platelet count increased subjects affected / exposed occurrences (all)	0 / 2 (0.00%) 0	0 / 2 (0.00%) 0	0 / 5 (0.00%) 0
Protein total increased subjects affected / exposed occurrences (all)	0 / 2 (0.00%) 0	0 / 2 (0.00%) 0	0 / 5 (0.00%) 0
Prothrombin time prolonged subjects affected / exposed occurrences (all)	0 / 2 (0.00%) 0	0 / 2 (0.00%) 0	0 / 5 (0.00%) 0
Red blood cell count decreased subjects affected / exposed occurrences (all)	0 / 2 (0.00%) 0	0 / 2 (0.00%) 0	0 / 5 (0.00%) 0
Weight increased subjects affected / exposed occurrences (all)	0 / 2 (0.00%) 0	0 / 2 (0.00%) 0	0 / 5 (0.00%) 0
White blood cell count decreased subjects affected / exposed occurrences (all)	0 / 2 (0.00%) 0	0 / 2 (0.00%) 0	0 / 5 (0.00%) 0
Injury, poisoning and procedural complications			
Contusion subjects affected / exposed occurrences (all)	0 / 2 (0.00%) 0	0 / 2 (0.00%) 0	0 / 5 (0.00%) 0
Foot fracture subjects affected / exposed occurrences (all)	0 / 2 (0.00%) 0	0 / 2 (0.00%) 0	0 / 5 (0.00%) 0
Hand fracture subjects affected / exposed occurrences (all)	0 / 2 (0.00%) 0	0 / 2 (0.00%) 0	0 / 5 (0.00%) 0
Joint injury subjects affected / exposed occurrences (all)	0 / 2 (0.00%) 0	1 / 2 (50.00%) 1	0 / 5 (0.00%) 0

More information

Substantial protocol amendments (globally)

Were there any global substantial amendments to the protocol? Yes

Date	Amendment
05 April 2018	minor changes
16 April 2018	Staggered enrolment of single dose patients Changes to I/E criteria requested internally and by central IRB Clarification in description of assessments Addition of HCV and HIV in infectious disease monitoring Addition of insulin dose adjusted HbA1c Addition of CGM Addition of tuberculosis test
08 October 2018	Addition of upper age limit (40 years) Clarification on the dose to be used in Phase 2a Clarifications to I/E criteria Addition of summary of non-clinical studies Clarifications to assessments Changes to grading and reporting of hypoglycemic and hyperglycemic events.
11 April 2019	Extension of screening period to 4 weeks Addition of HBV to infectious disease monitoring Change of Safety Management and pharmacovigilance vendor Clarifications to assessments Addition of Interim Analysis protocol section Clarification to infusion withholding criteria
19 September 2019	Change to inclusion criteria and infusion withholding criteria (bilirubin) Clarification on replacement of patients who cannot receive the first dose of teplizumab due to withholding criteria
03 February 2020	Clarification of assessments Modification of infusion withholding criteria and criteria for suspension of enrollment
11 June 2020	Addition of SARS-Cov2 PCR test Addition of interim analyses

Notes:

Interruptions (globally)

Were there any global interruptions to the trial? Yes

Date	Interruption	Restart date
------	--------------	--------------

30 August 2019	In line with the protocol defined enrollment suspension criteria for teplizumab infusion withholding in >20% of exposed patients, enrollment was temporarily paused, pending data review by the DSMB. Data review was performed on 04-Sep-2019 and the DSMB subsequently confirmed that enrollment could resume.	04 September 2019
11 October 2019	In line with the protocol defined enrollment suspension criteria for teplizumab infusion withholding in >20% of exposed patients, enrollment was temporarily paused, pending data review by the DSMB. Data review was performed on 16-Oct-2019 and the DSMB subsequently confirmed that enrollment could resume.	16 October 2019
18 March 2020	After consulting with the DSMB, the Sponsor decided to temporarily suspend enrollment of new patients into the study due to the COVID-19 pandemic. In the following mnths, the Sponsor has generated a set of measures to protect the safety and well being of all study patients, and to ensure the integrity of the data. These included, amongst others, generation of a protocol amendment, generation of a checklist for reopening sites on a case-by-case basis, taking measures to allow for remote data monitoring, taking measures to enable home healthcare visits for study patients, and reinforcing the DSMB with 2 infectious disease experts. On 24-Jun-2020 all measures were presented to the DSMB, who concluded that enrollment could resume on a site-by-site basis, provided that all required measures were in place.	24 June 2020

Notes:

Limitations and caveats

Limitations of the trial such as small numbers of subjects analysed or technical problems leading to unreliable data.

As this was a first in human study, it was exclusively designed to demonstrate the safety and tolerability of AG019 (alone and in association with teplizumab). It was not powered to demonstrate efficacy (sample size too low).

Notes:
