

## Clinical trial results:

**A randomized, parallel-group, double-blind and open-label, placebo-controlled, multicenter study to assess the efficacy and safety of vilaprisan in subjects with uterine fibroids**

### Summary

EudraCT number	2017-002997-38
Trial protocol	CZ BG
Global end of trial date	06 April 2022

### Results information

Result version number	v1 (current)
This version publication date	31 March 2023
First version publication date	31 March 2023

### Trial information

#### Trial identification

Sponsor protocol code	BAY1002670/15787
-----------------------	------------------

#### Additional study identifiers

ISRCTN number	-
ClinicalTrials.gov id (NCT number)	NCT03400943
WHO universal trial number (UTN)	-

Notes:

Scientific contact	Therapeutic Area Head, Bayer AG, +49 30 300139003, clinical-trials-contact@bayer.com

Notes:

### Paediatric regulatory details

Is trial part of an agreed paediatric investigation plan (PIP)	No
Does article 45 of REGULATION (EC) No 1901/2006 apply to this trial?	No
Does article 46 of REGULATION (EC) No 1901/2006 apply to this trial?	No

Notes:

## Results analysis stage

Analysis stage	Final
Date of interim/final analysis	06 April 2022
Is this the analysis of the primary completion data?	No

Global end of trial reached?	Yes
Global end of trial date	06 April 2022
Was the trial ended prematurely?	Yes

Notes:

## General information about the trial

Main objective of the trial:

The primary objective of this study is to show superiority in the treatment of Heavy menstrual bleeding (HMB) of vilaprisan in subjects with uterine fibroids compared to placebo.

Protection of trial subjects:

The conduct of this clinical study met all local legal and regulatory requirements. The study was conducted in accordance with ethical principles that have their origin in the Declaration of Helsinki and the International Council for Harmonization guideline E6: Good Clinical Practice. Before entering the study, the informed consent was read by and explained to all the subjects. Participating subjects signed informed consent form and could withdraw from the study at any time without any disadvantage and without having to provide a reason for this decision. Only investigators qualified by training and experience were selected as appropriate experts to investigate the study drug.

Background therapy: -

Evidence for comparator: -

Actual start date of recruitment	15 December 2017
Long term follow-up planned	No
Independent data monitoring committee (IDMC) involvement?	No

Notes:

## Population of trial subjects

### Subjects enrolled per country

Country: Number of subjects enrolled	China: 27
Country: Number of subjects enrolled	Israel: 4
Country: Number of subjects enrolled	Malaysia: 4
Country: Number of subjects enrolled	New Zealand: 1
Country: Number of subjects enrolled	United States: 45
Country: Number of subjects enrolled	Czechia: 7
Country: Number of subjects enrolled	Bulgaria: 5
Worldwide total number of subjects	93
EEA total number of subjects	12

Notes:

### Subjects enrolled per age group

In utero	0
Preterm newborn - gestational age < 37 wk	0
Newborns (0-27 days)	0

Infants and toddlers (28 days-23 months)	0
Children (2-11 years)	0
Adolescents (12-17 years)	0
Adults (18-64 years)	93
From 65 to 84 years	0
85 years and over	0

## Subject disposition

### Recruitment

Recruitment details:

The study was conducted at 104 study centers in 9 countries worldwide between 17-Jan-2018 (first subject first visit) and 06-Apr-2022 (last subject last visit).

### Pre-assignment

Screening details:

Overall, 646 subjects were screened. Of the 646 screened subjects, 553 (85.6%) subjects were not randomized to treatment. The majority of these (n=403) were screen failures. Of the 93 subjects who were randomized, 79 subjects received study treatment.

### Period 1

Period 1 title	Treatment Period 1
Is this the baseline period?	Yes
Allocation method	Randomised - controlled
Blinding used	Double blind
Roles blinded	Subject, Investigator, Monitor, Data analyst, Carer, Assessor

Blinding implementation details:

Blinding was applied to Treatment Groups A1, B1, and B2; Treatment Group A2 was open-label.

### Arms

Are arms mutually exclusive?	Yes
<b>Arm title</b>	Vilaprisan (A1)

Arm description:

Vilaprisan (2 mg) in treatment period 1 for 12 weeks and in treatment period 2 for 12 weeks, separated by 1 bleeding episode.

Arm type	Experimental
Investigational medicinal product name	Vilaprisan
Investigational medicinal product code	BAY1002670
Other name	
Pharmaceutical forms	Film-coated tablet
Routes of administration	Oral use

Dosage and administration details:

2 mg, once daily

<b>Arm title</b>	Vilaprisan (A2)
------------------	-----------------

Arm description:

Vilaprisan (2 mg) in treatment period 1 for 12 weeks and in treatment period 2 for 12 weeks without a break.

Arm type	Experimental
Investigational medicinal product name	Vilaprisan
Investigational medicinal product code	BAY1002670
Other name	
Pharmaceutical forms	Film-coated tablet
Routes of administration	Oral use

Dosage and administration details:

2 mg, once daily

<b>Arm title</b>	Placebo+Vilaprisan (B1)
------------------	-------------------------

Arm description:

Placebo in treatment period 1 for 12 weeks, and vilaprisan (2 mg) in treatment period 2 for 12 weeks, separated by 1 bleeding episode.

Arm type	Experimental
----------	--------------

Investigational medicinal product name	Vilaprisan

Completed	18
Not completed	3
Consent withdrawn by subject	-
Adverse event, non-fatal	1
Other	1
Never treated	1

Notes:

[1] - The number of subjects reported to be in the baseline period are not the same as the worldwide number enrolled in the trial. It is expected that these numbers will be the same.

Justification: In total, 93 subjects were randomized. For baseline characteristics, the full analysis set population was analysed which consists of all randomized subjects, excluding the randomized subjects who did not start treatment period (TP) 1 due to the study being temporarily on hold.

## Period 2

Period 2 title	Treatment period 2
Is this the baseline period?	No
Allocation method	Randomised - controlled
Blinding used	Double blind
Roles blinded	Subject, Investigator, Monitor, Data analyst, Carer, Assessor

## Arms

Are arms mutually exclusive?	Yes
<b>Arm title</b>	Vilaprisan (A1)

Unspecified	-

---

Notes:

[2] - The number of subjects starting the period is not consistent with the number completing the preceding period. It is expected the number of subjects starting the subsequent period will be the same as the number completing the preceding period.

Justification: The primary reason for subjects who did not starting TP2 was study terminated by sponsor (i.e. closing of study with comprehensive safety follow up).

## Baseline characteristics

## End points

### End points reporting groups

Reporting group title	Vilaprisan (A1)
Reporting group description: Vilaprisan (2 mg) in treatment period 1 for 12 weeks and in treatment period 2 for 12 weeks, separated by 1 bleeding episode.	
Reporting group title	Vilaprisan (A2)
Reporting group description: Vilaprisan (2 mg) in treatment period 1 for 12 weeks and in treatment period 2 for 12 weeks without a break.	
Reporting group title	Placebo+Vilaprisan (B1)
Reporting group description: Placebo in treatment period 1 for 12 weeks, and vilaprisan (2 mg) in treatment period 2 for 12 weeks, separated by 1 bleeding episode.	
Reporting group title	Vilaprisan+Placebo (B2)
Reporting group description: Vilaprisan (2 mg) in treatment period 1 for 12 weeks and placebo in treatment period 2 for 12 weeks, separated by 1 bleeding episode.	
Reporting group title	Vilaprisan (A1)
Reporting group description: Vilaprisan (2 mg) in treatment period 1 for 12 weeks and in treatment period 2 for 12 weeks, separated by 1 bleeding episode.	
Reporting group title	Vilaprisan (A2)
Reporting group description: Vilaprisan (2 mg) in treatment period 1 for 12 weeks and in treatment period 2 for 12 weeks without a break.	
Reporting group title	Placebo+Vilaprisan (B1)
Reporting group description: Placebo in treatment period 1 for 12 weeks, and vilaprisan (2 mg) in treatment period 2 for 12 weeks, separated by 1 bleeding episode.	
Reporting group title	Vilaprisan+Placebo (B2)
Reporting group description: Vilaprisan (2 mg) in treatment period 1 for 12 weeks and placebo in treatment period 2 for 12 weeks, separated by 1 bleeding episode.	
Subject analysis set title	Safety analysis set (SAF)
Subject analysis set type	Safety analysis
Subject analysis set description: SAF consisted of all randomized subjects in the full analysis set (FAS) who took at least 1 dose of study drug.	
Subject analysis set title	Full analysis set (FAS)
Subject analysis set type	Full analysis
Subject analysis set description: FAS consists of all randomized subjects, excluding randomized subjects who did not start treatment period 1 due to the study being temporarily on hold.	

### Primary: Number of subjects with amenorrhea

End point title	Number of subjects with amenorrhea
End point description: Amenorrhea was defined as menstrual blood loss (MBL) <2 mL during the last 28 days of treatment measured by the alkaline hematin (AH) method.	
End point type	Primary
End point timeframe: The last 28 days of treatment period 1	

<b>End point values</b>	Vilaprisan (A1)	Vilaprisan (A2)	Placebo+Vilaprisan (B1)	Vilaprisan+Placebo (B2)
Subject group type	Reporting group	Reporting group	Reporting group	Reporting group
Number of subjects analysed	20	23	20	21
Units: Participants	16	20	4	15

## Statistical analyses

<b>Statistical analysis title</b>	The difference in amenorrhea rates
Statistical analysis description:	
Vilaprisan (A1) and Vilaprisan+Placebo (B2) combined vs. Placebo+Vilaprisan (B1) in treatment period 1	
Comparison groups	Vilaprisan (A1) v Placebo+Vilaprisan (B1) v Vilaprisan+Placebo (B2)
Number of subjects included in analysis	61
Analysis specification	Pre-specified
Analysis type	
P-value	< 0.0001
Method	Cochran-Mantel-Haenszel
Parameter estimate	Risk difference (RD)
Point estimate	0.56
Confidence interval	
level	95 %
sides	2-sided
lower limit	0.33
upper limit	0.78

## Secondary: Time to onset of amenorrhea

End point title	Time to onset of amenorrhea
End point description:	
Onset of amenorrhea was defined by the first day for which the MBL for all subsequent 28-day periods up to the end of a treatment period was < 2 mL (amenorrhea defined similar to primary endpoint). For treatment period 1 and treatment period 2, "99999" indicates that the value could not be estimated due to censored data. For the treatment periods 1 and 2 combined, "99999" indicates no value because treatment group A2 is the only treatment arm, where TP1 and TP2 didn't include any break and therefore TP1 and TP2 were combined.	
End point type	Secondary
End point timeframe:	
In treatment period 1 (12 weeks) and in treatment period 2 (12 weeks)	

End point values	Vilaprisan (A1)	Vilaprisan (A2)	Placebo+Vilaprisan (B1)	Vilaprisan+Placebo (B2)
Subject group type	Reporting group	Reporting group	Reporting group	Reporting group
Number of subjects analysed	20	23	20	21
Units: Days				
median (inter-quartile range (Q1-Q3))				
Treatment Period 1	3 (2 to 4)	99999 (99999 to 99999)	99999 (99999 to 99999)	6 (1 to 46)
Treatment Period 2	21 (2 to 32)	99999 (99999 to 99999)	2 (1 to 99999)	99999 (99999 to 99999)
Treatment periods 1 and 2 combined	99999 (99999 to 99999)	9 (3 to 107)	99999 (99999 to 99999)	99999 (99999 to 99999)

## Statistical analyses

No statistical analyses for this end point

## Secondary: Time to onset of controlled bleeding

End point title	Time to onset of controlled bleeding
End point description:	
Onset of controlled bleeding was defined by the first day for which the MBL for all subsequent 28-day periods up to the end of a treatment period was <80.00 mL based on AH-method. For treatment period 1 and treatment period 2, "99999" indicates that the value could not be estimated due to censored data. For the treatment periods 1 and 2 combined, "99999" indicates no value because treatment group A2 is the only treatment arm, where TP1 and TP2 didn't include any break and therefore TP1 and TP2 were combined.	
End point type	Secondary
End point timeframe:	
In treatment period 1 (12 weeks) and in treatment period 2 (12 weeks)

## Adverse events

### Adverse events information

Timeframe for reporting adverse events:

The observation period for AEs will start with signing the informed consent and will end with the last visit.

Adverse event reporting additional description:

For TEAEs: subject will be counted for both treatment groups if she received different treatments (vilaprisan or placebo) in the two treatment periods. For Post-treatment AEs: SAF was used.

Assessment type	Non-systematic

## More information

### Substantial protocol amendments (globally)

Were there any global substantial amendments to the protocol? Yes

Date	Amendment
15 November 2017	- The collection period for sanitary products was extended to cover the entire study. The rationale for this change was based on the fact that the AH method was the only validated method to collect information on menstrual blood loss volume accepted by the FDA. - The statistical sections of the protocol were updated. In order to consider feedback from Authorities and to support label claims on the efficacy endpoints HMB response, time to onset of amenorrhea, and time to onset of controlled bleeding. Time to onset of amenorrhea was elevated to a secondary endpoint and all of these above-mentioned endpoints were included in the hierarchical testing strategy. Description of analyses and missing data considerations were added for these endpoints and the rationale for the study sample size was modified with respect to these changes in the testing strategy. Furthermore, the calculation of the primary efficacy variable was adapted and further efficacy variables were added to 'other' efficacy variables.
04 July 2018	- Text added describing hepatic safety signal with Esmya (ulipristal acetate), a compound that belongs to the compound group of selective PRMs, and the result of the respective PRAC review procedure including risk minimization measures. - Provided rationale that vilaprisan is structurally different from other selective PRMs. - Description of increased frequency of liver monitoring and its background in subsection "safety monitoring" added. The criterion about abnormal liver parameters was revised. The diagnosis of chronic hepatitis B / C infection was added to exclusion criteria. A description for liver symptom inquiry was included and added to all visits. More detailed instructions for the monitoring of liver parameters and liver disorders and for close observation in cases with increased liver parameters and liver disorders were added.
11 December 2018	- Introduction of measures for the temporary pause of the study: due to preliminary findings from 2-year animal carcinogenicity studies, the sponsor decided on 3 DEC 2018 that patients must not start treatment/not start a new treatment course while the preliminary findings from the carcinogenicity studies and their relevance to humans were further investigated.
21 November 2019	- Introduction of measures and processes to prepare the study for an orderly closure to allow for thorough evaluation of preclinical and clinical data prior to further decisions on the development of vilaprisan. - Information on carcinogenicity studies with vilaprisan in rodents as well as details regarding the additional safety measures were added, including adrenal monitoring, endometrial monitoring and skin monitoring. - Primary efficacy analysis limited to Treatment Period 1.
17 February 2020	- The amendment addresses comments from the FDA regarding details of the safety-follow-up measures introduced in protocol amendment 5, Version 5.0. - Described how subjects were counseled when test results (e.g., hormone, liver, physical examination) were abnormal but still below the thresholds to trigger outside evaluation in the context of the study. In such cases subjects were at least to be counseled about medical follow up according to local practice. - Revised the interval for blood sampling after intake of high doses of biotin from 8 to 72 hours. - Added glycosylated hemoglobin (HbA1c) to the parameters measured for adrenal monitoring also in subjects who had completed or discontinued the study before or during the temporary pause. - Added clarification that all randomized subjects belong to the FAS, excluding randomized subjects who did not start Treatment Period 1 due to the premature closure of the study.

Notes:

---

## Interruptions (globally)

Were there any global interruptions to the trial? Yes

Date	Interruption	Restart date
03 December 2018	Bayer decided to temporarily pause enrollment and randomization, and to temporarily stop study treatment in already randomized patients after completion of the ongoing treatment period.	-

Notes:

## Limitations and caveats

Limitations of the trial such as small numbers of subjects analysed or technical problems leading to unreliable data.

3 subjects who were assigned to B1, erroneously received VPR instead of placebo in TP1. 2 subjects who were assigned to B1, erroneously received placebo instead of VPR in TP2. Analysis of safety was performed by actual treatment.
