Global end of trial reached?	Yes	
Global end of trial date	09 October 2019	
Was the trial ended prematurely?	Yes	

Notes:

General information about the trial

Main objective of the trial:

The primary objective of this study was to assess the immune response to an influenza vaccine in adults with B-cell malignancies who were receiving treatment with idelalisib in a Gilead-sponsored study (parent study: GS-US-313-1580 [NCT02536300]).

Protection of trial subjects:

The protocol and consent/assent forms were submitted by each investigator to a duly constituted Independent Ethics Committee (IEC) or Institutional Review Board (IRB) for review and approval before study initiation. All revisions to the consent/assent forms (if applicable) after initial IEC/IRB approval were submitted by the investigator to the IEC/IRB for review and approval before implementation in accordance with regulatory requirements.

This study was conducted in accordance with recognized international scientific and ethical standards, including but not limited to the International Conference on Harmonization guideline for Good Clinical Practice (ICH GCP) and the original principles embodied in the Declaration of Helsinki.

Population	of	trial	subjects

Subjects enrolled per country

Country: Number of subjects enrolled	Spain: 1
Country: Number of subjects enrolled	Czech Republic: 1
Worldwide total number of subjects	2
EEA total number of subjects	2

Notes:

Subjects enrolled per age group		
In utero	0	
Preterm newborn - gestational age < 37 wk	0	
Newborns (0-27 days)	0	
Infants and toddlers (28 days-23 months)	0	
Children (2-11 years)	0	

Adolescents (12-17 years)	0
Adults (18-64 years)	1
From 65 to 84 years	1
85 years and over	0

Subject disposition

Recruitment

Recruitment details:

Participants were enrolled at study sites in Europe. The first participant was screened on 23 October 2018.

Pre-assignment

Screening details:

2 participants were screened.

Perio	nd 1

Period 1 title	Overall Study (overall period)
Is this the baseline period?	Yes
Allocation method	Not applicable
Blinding used	Not blinded
Arms	
Arm title	Idelalisib/Influenza Vaccine

Arm description:

Participants who were receiving treatment with idelalisib (100 mg or 150 mg tablets orally twice daily) for at least 7 consecutive days prior to receiving an influenza vaccine in a Gilead-sponsored parent study (GS-US-313-1580 [NCT02536300]), continued to receive idelalisib (per dose and schedule of parent study) along with the influenza vaccine within 7 days of baseline (Day 1) blood sample collection, administered per standard of care using a vaccine licensed and recommended in the site's country.

Arm type	Experimental
Investigational medicinal product name	Influenza Vaccine
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Solution for injection
Routes of administration	Subcutaneous use

Dosage and administration details:

Administered per standard of care using a vaccine licensed and recommended in the site's country.

Investigational medicinal product name	Idelalisib
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Tablet
Routes of administration	Oral use

Dosage and administration details:

Administered per dose and schedule of parent study.

Number of subjects in period 1	Idelalisib/Influenza Vaccine
Started	2
Completed	2

Baseline characteristics

Reporting groups	
Reporting group title	Idelalisib/Influenza Vaccine

Reporting group description:

Participants who were receiving treatment with idelalisib (100 mg or 150 mg tablets orally twice daily) for at least 7 consecutive days prior to receiving an influenza vaccine in a Gilead-sponsored parent study (GS-US-313-1580 [NCT02536300]), continued to receive idelalisib (per dose and schedule of parent study) along with the influenza vaccine within 7 days of baseline (Day 1) blood sample collection, administered per standard of care using a vaccine licensed and recommended in the site's country.

Substantial protocol amendments (globally)

Were there any global substantial amendments to the protocol? Yes

Date	Amendment
31 January 2018	Based on responses from site selection and feasibility discussions, the protocol was revised to allow participants to receive an influenza vaccination per Standard of Care (SoC) in an inpatient or outpatient medical setting, including but not necessarily limited to hospitals, clinics, health departments, and general practitioner offices. In addition, revisions were made to improve the operational feasibility of the study.
12 April 2018	Following submission of the clinical trial application via the Voluntary Harmonization Procedure (VHP), Gilead received requests to amend the study from the participating member states in VHP. This protocol amendment addressed the VHP's requests.

Notes:

Interruptions (globally)

Were there any global interruptions to the trial? Yes

Date	Interruption	Restart date
09 October 2019	Study GS-US-313-4100 was initially planned and conducted to fulfill a post-marketing clinical stipulation from Swissmedic to collect data on the investigation of the impact of idelalisib on the immune system and to submit the study report by no later than 31 October 2020. On 01 October 2019, Swissmedic agreed with Gilead's request to be released from this stipulation as not enough participants were able to be recruited for this study. As a result, Gilead terminated Study GS-US-313-4100 early. A letter to investigators was issued globally on 09 October 2019 providing notification regarding study termination.	-

Notes:

Limitations and caveats

Limitations of the trial such as small numbers of subjects analysed or technical problems leading to unreliable data.

The study was terminated early and only 2 participants were enrolled so no efficacy analyses and no summary analyses were conducted.

Notes:
