#### Paediatric regulatory details

Is trial part of an agreed paediatric investigation plan (PIP)	Yes
EMA paediatric investigation plan number(s)	EMA-002031-PIP01-16
Does article 45 of REGULATION (EC) No 1901/2006 apply to this trial?	No
Does article 46 of REGULATION (EC) No 1901/2006 apply to this trial?	No

Notes:

## Results analysis stage

Analysis stage	Final
Date of interim/final analysis	29 November 2022
Is this the analysis of the primary completion data?	Yes
Primary completion date	18 August 2021
Global end of trial reached?	Yes
Global end of trial date	14 September 2022
Was the trial ended prematurely?	No

Notes:

## General information about the trial

Main objective of the trial:

The purpose of this study is to expand the knowledge on the efficacy and safety of emapalumab (previously known as NI-0501) in children, as a treatment for primary haemophagocytic lymphohistiocytosis (HLH) patients, including long-term outcomes and quality of life assessments. Emapalumab can be administered as the first-line therapy to patients not previously treated with the current standard of care, or can be given to patients who have either failed or were unable to tolerate the available standard of care.

Emapalumab is to be administered until the start of conditioning for hematopoietic stem cell transplantation (HSCT), with an anticipated duration ranging from a minimum of 4 weeks to approximately 12 weeks and not exceeding 6 months.

After treatment completion, patients will continue in the study for long-term follow-up (in the follow-up period [FUP]) until 1 year after either HSCT or last emapalumab infusion (if HSCT is not performed).

Protection of trial subjects:

Written informed consent/assent was obtained from all patients or their parents/legal guardian prior to enrolment into the study, as dictated by the Declaration of Helsinki. The method of obtaining and documenting informed consent and the contents of the consent complied with ICH-GCP and all applicable regulatory requirement(s). If an amended protocol impacted the content of the informed consent document, the consent/assent document had to be revised. Patients already participating in the study when the amended protocol was implemented had to be reconsented/re-assented with the revised version of the informed consent/assent document.

From Protocol V2.0 for North America (dated 18 July 2018), an Independent Data Monitoring Committee (IDMC) was appointed in place of the safety management team to regularly assess the benefit/risk profile of emapalumab treatment.

Background therapy:

Dexamethasone from Study Day -1.

Evidence for comparator: -

Actual start date of recruitment	06 February 2019
Long term follow-up planned	Yes
Long term follow-up rationale	Efficacy, Safety
Long term follow-up duration	12 Months
Independent data monitoring committee (IDMC) involvement?	Yes

## Subject disposition

### Recruitment

Recruitment details:

The study was open to enrollment of pediatric patients with pHLH who were treatment-naïve, failed conventional HLH therapy, or showed signs of intolerance to it.

### Pre-assignment

Screening details:

Screening was carried out within 2 weeks prior to first administration of emapalumab (SD0) to enable confirmation of patient eligibility, and following the completion of the Informed Consent Form (and Informed Assent Form, when applicable). A total of 41 patients were screened for this study, with 6 patients failing screening (due to not meeting th

### Period 1

Period 1 title	Overall Trial (overall period)
Is this the baseline period?	Yes
Allocation method	Not applicable
Blinding used	Not blinded

### Arms

Arm title	All patients (emapalumab)
-----------	---------------------------

Arm description:

Emapalumab was administered by intravenous infusion, twice weekly to all patients during the treatment period. The duration of treatment was foreseen until the start of conditioning for HSCT but was not to exceed 6 months. The minimum treatment duration was 4 weeks if the patient's condition and donor availability allowed HSCT to be performed. After treatment completion or treatment discontinuation (for any reason), patients could continue in the study for long-term follow-up until 1 year after either HSCT or the last emapalumab infusion (if HSCT was not performed).

Arm type	Experimental
Investigational medicinal product name	emapalumab
Investigational medicinal product code	NI-0501
Other name	
Pharmaceutical forms	Concentrate for solution for infusion
Routes of administration	Intravenous use

Dosage and administration details:

Emapalumab was administered by IV infusion over 1 to 2 hours, at a dose of 3 mg/kg, twice weekly (not >4 days apart), except the second infusion was to be administered on SD3. The 3 mg/kg-dose was maintained unless the Investigator deemed a dose increase appropriate. At any time during the study the dose could be increased to 6 mg/kg. A further dose increase to 10 mg/kg could be considered based on the patient's clinical and laboratory response.

If a patient experienced HLH reactivation during the follow up, they could be retreated upon discussion with the Sponsor. Retreated patients followed the same schedule of assessments as applicable during initial treatment (i.e., starting from Visit 1) and re-entered the follow up after completion of retreatment.

Upon achievement of a complete response the dose of emapalumab was to be lowered to achieve 1 mg/kg twice a week and maintained until conditioning for transplant. Decrease of the emapalumab dose was to occur in a stepwise fashion.

### Primary: Overall Response at Week 8 or End of Treatment (if earlier)

End point title	Overall Response at Week 8 or End of Treatment (if earlier)
-----------------	---

End point description:

The overall response rate (ORR) of patients achieving either Complete or Partial Response or HLH Improvement, at Week 8 or EOT (whichever occurs earlier).

ORR comprised complete response, partial response, or HLH improvement. The 1-sided p-value was based on a 1-sided exact binomial test comparing proportion of patients with overall response to hypothesized null hypothesis of at most 40%.

The ORR for the all-treated analysis set was 62.9% (95% CI [exact]: 44.9% to 78.5%), with a statistically significant difference from the pre-set null hypothesis of 40% (p-value = 0.0053). The number of patients with a complete response was 5; there were 16 patients with a partial response, 1 patient with HLH improvement, and 13 patients with no response.

End point type	Primary
----------------	---------

End point timeframe:

Up to Week 8.

## Statistical analyses

Statistical analysis title	Exact binomial test - all-treated analysis set
----------------------------	--

Statistical analysis description:

The analysis of the primary endpoint utilized an exact binomial test to evaluate the null hypotheses that the overall response rate (ORR) was, at most, 40%. The test was undertaken at the 1-sided 0.025 level. Due to the inability of presenting the statistical analysis for single arm studies within EudraCT, it is presented here as a comparison to baseline. The number of subjects analyzed was 35, as the comparison was within a single group.

Comparison groups	Baseline v All-treated analysis set
Number of subjects included in analysis	70
Analysis specification	Pre-specified
Analysis type	superiority <sup>[1]</sup>
P-value	= 0.0053 <sup>[2]</sup>
Method	Exact binomial

Notes:

[1] - The pre-specified null hypothesis was that the ORR was, at most, 40%.

[2] - This test was undertaken at the one-sided 0.025 significance level.

Statistical analysis title	Exact binomial test - treatment-naïve
----------------------------	---------------------------------------

Statistical analysis description:

[6] - This test was undertaken at the one-sided 0.025 significance level.

## Secondary: Overall Survival

End point title	Overall Survival
-----------------	------------------

End point description:

Number of patients surviving, including survival to HSCT and survival after either HSCT or last emapalumab infusion (if HSCT was not performed).

25 patients (71.4 %) overall in the All-treated analysis set received HSCT or were alive at end of study if HSCT was not deemed as indicated by the Investigators (treatment naïve: 12 patients [75.0 %] and treatment-experienced: 13 patients [68.4 %]).

Among the 23 patients who underwent HSCT, 17 patients (73.9 %) overall were alive at the end of the study (8 treatment-naïve patients [72.7 %] and 9 treatment-experienced patients [75.0 %]). Six patients died after HSCT (3 treatment-naïve and 3 treatment-experienced).

End point type	Secondary

## Secondary: Duration of Response

End point title	Duration of Response
-----------------	----------------------

End point description:

Duration of response, i.e., maintenance of the response achieved at any time during the study (with censoring time at start of conditioning for patients with no event) calculated only for patients showing confirmed overall response.

28 patients in the All-treated analysis set (80.0%) experienced at least 1 response that was maintained for at least 4 days, at some point during the study (in contrast with the primary efficacy analysis, responses included here were not necessarily observed at EOT or Week 8). Patients who never had a response were not included in the analysis.

Median time to loss of response was 40 days (95% CI: 19.0 to not calculable [NC]) in the treatment-naïve group and 61 days (95% CI: 21.0 to NC). In the All-treated analysis set, median time to loss of response was 61 days (95% CI: 21.0 to NC).

## Secondary: Quality of Life Assessed Through Behavioral, Affective and Somatic Experiences Scales (BASES)

End point title	Quality of Life Assessed Through Behavioral, Affective and Somatic Experiences Scales (BASES)
-----------------	---

End point description:

Assessment of the quality of life using the BASES questionnaires, a validated 38-item questionnaire; a reduced non-validated 22-item version of the questionnaire was used in an exploratory nature for the secondary endpoint. BASES subscale scores were calculated using a 5-point Likert scale from 1 to 5 for all items and they were weighted equally to calculate subscale scores for the following domains:

- Physical Discomfort (5 items – 1 is considered best response)
- Cooperation/Compliance (5 items – 1 is considered best response)
- Mood/Behavior (7 items – 5 is considered best response)
- Quality of Interactions (3 items – 1 is considered best response)
- Activity/Sleep (2 items – 5 is considered best response for patient's activity level and 1 is considered best response for patient's sleeping)

Only patients with HSCT performed were analyzed. The BASES scores showed comparable mean values between treatment-naïve and treatment-experienced patients at the end of treatment.

## Secondary: Incidence, Severity, Causality and Outcomes of AEs (serious and non-serious)

End point title	Incidence, Severity, Causality and Outcomes of AEs (serious and non-serious)
-----------------	--

End point description:

All 35 patients (100%) experienced at least 1 TEAE, with 9 patients (25.7%) experiencing 30 TEAEs assessed as related to the study drug. Related TEAEs were reported in 3 of 16 treatment-naïve patients and in 6 of 19 treatment-experienced patients. 129 serious TEAEs were reported in 32 patients (91.4%), in all of the treatment-naïve patients (100%) and in 84.2% of the treatment-experienced patients. Six of these events were assessed as related to the study drug in 4 patients (11.4%). No patient withdrew from the study due to an AE. There were 21 SAEs with an outcome of death in 16 patients (45.7%). None were assessed as related to the study drug. The incidence of related serious TEAEs and serious TEAEs with an outcome of death was similar in treatment-naïve and treatment-experienced patients.

## Secondary: Number of Patients who Discontinued Emapalumab Treatment

End point title	Number of Patients who Discontinued Emapalumab Treatment
-----------------	--

End point description:

Number of patients who discontinued emapalumab treatment for safety reasons.

The study drug was discontinued due to 10 TEAEs in 7 patients overall (20.0%); 3 of 16 treatment-naïve patients and 4 of 19 treatment-experienced patients. In 5 patients (14.2%), emapalumab was discontinued in connection to worsening of the disease under study. In 1 patient (2.9%) emapalumab was discontinued due to pulmonary hypertension. In 1 patient (2.9%), the TEAE of acute respiratory failure leading to discontinuation of study drug was the only TEAE assessed as related to the study drug; the outcome was reported as resolved.

occurrences (all)	1	0	1
Iron overload			
subjects affected / exposed	0 / 16 (0.00%)	1 / 19 (5.26%)	1 / 35 (2.86%)
occurrences (all)	0	1	1
Metabolic acidosis			
subjects affected / exposed	1 / 16 (6.25%)	0 / 19 (0.00%)	1 / 35 (2.86%)
occurrences (all)	1	0	1

## More information

### Substantial protocol amendments (globally)

Were there any global substantial amendments to the protocol? Yes

Date	Amendment
31 March 2020	There was 1 global protocol amendment (version 4.0, global, dated 31-Mar-2020). Full details of the changes introduced in that amendment are included in the uploaded PDF.

Notes:

---

### Interruptions (globally)

Were there any global interruptions to the trial? No

### Limitations and caveats

None reported
