

## Clinical trial results:

### A Randomized, Double-Blind, Placebo-Controlled Study to Evaluate the Efficacy and Safety of BG00011 in Patients With Idiopathic Pulmonary Fibrosis

#### Summary

EudraCT number	2017-003158-18
Trial protocol	CZ GB DK NL GR BE ES DE PL IT
Global end of trial date	14 November 2019

#### Results information

Result version number	v1 (current)
This version publication date	14 November 2020
First version publication date	14 November 2020

#### Trial information

##### Trial identification

Sponsor protocol code	203PF203
-----------------------	----------

##### Additional study identifiers

ISRCTN number	-
ClinicalTrials.gov id (NCT number)	NCT03573505
WHO universal trial number (UTN)	-

Notes:

#### Sponsors

Sponsor organisation name	Biogen
Sponsor organisation address	250 Binney Street, Cambridge, United States, 02142
Public contact	Biogen Study Medical Director, Biogen, clinicaltrials@biogen.com
Scientific contact	Biogen Study Medical Director, Biogen, clinicaltrials@biogen.com

Notes:

#### Paediatric regulatory details

Is trial part of an agreed paediatric investigation plan (PIP)	No
Does article 45 of REGULATION (EC) No 1901/2006 apply to this trial?	No
Does article 46 of REGULATION (EC) No 1901/2006 apply to this trial?	No

Notes:

## Results analysis stage

Analysis stage	Final
Date of interim/final analysis	14 November 2019
Is this the analysis of the primary completion data?	No
Global end of trial reached?	Yes
Global end of trial date	14 November 2019
Was the trial ended prematurely?	Yes

Notes:

## General information about the trial

Main objective of the trial:

The primary objective of this study is to evaluate the efficacy of BG00011 compared with placebo in subjects with Idiopathic Pulmonary Fibrosis (IPF).

Protection of trial subjects:

Written informed consent was obtained from each subject or subject's legally authorized representative (e.g., parent or legal guardian), as applicable, prior to evaluations performed for eligibility. Subjects or the subject's legally authorized representative were given adequate time to review the information in the informed consent/assent and were allowed to ask, and have answered, questions concerning all portions of the conduct of the study.

Background therapy: -

Evidence for comparator: -

Actual start date of recruitment	24 September 2018
Long term follow-up planned	Yes
Long term follow-up rationale	Safety, Efficacy
Long term follow-up duration	2 Months
Independent data monitoring committee (IDMC) involvement?	Yes

Notes:

## Population of trial subjects

### Subjects enrolled per country

Country: Number of subjects enrolled	United States: 29
Country: Number of subjects enrolled	Australia: 28
Country: Number of subjects enrolled	Netherlands: 8
Country: Number of subjects enrolled	Korea, Republic of: 7
Country: Number of subjects enrolled	United Kingdom: 6
Country: Number of subjects enrolled	Chile: 6
Country: Number of subjects enrolled	Czech Republic: 6
Country: Number of subjects enrolled	Greece: 3
Country: Number of subjects enrolled	Italy: 3
Country: Number of subjects enrolled	Argentina: 2
Country: Number of subjects enrolled	Denmark: 2
Country: Number of subjects enrolled	Poland: 2
Country: Number of subjects enrolled	France: 1
Country: Number of subjects enrolled	Israel: 1
Country: Number of subjects enrolled	Russian Federation: 1
Country: Number of subjects enrolled	Spain: 1

Worldwide total number of subjects	106
EEA total number of subjects	32

Notes:

<b>Subjects enrolled per age group</b>	
In utero	0
Preterm newborn - gestational age < 37 wk	0
Newborns (0-27 days)	0
Infants and toddlers (28 days-23 months)	0
Children (2-11 years)	0
Adolescents (12-17 years)	0
Adults (18-64 years)	30
From 65 to 84 years	76
85 years and over	0

## Subject disposition

### Recruitment

Recruitment details:

Subjects were enrolled at 47 investigational sites in 16 countries from September 24, 2018 to November 14, 2019. Out of 109 enrolled subjects, 106 were treated (mITT population) and 3 were not treated. Data for subject number per country and age-group breakdown is provided for 106 subjects as data for age for one of the subjects was not collected.

### Pre-assignment

Screening details:

A total of 109 subjects with Idiopathic pulmonary fibrosis (IPF) were enrolled and randomized in this study. Of which, 106 subjects received at least one dose of study drug (mITT). The maximum length of the dosing period was up to Week 46. Subjects were then followed-up for safety for up to Week 60.

### Period 1

Period 1 title	Overall Study (overall period)
Is this the baseline period?	Yes
Allocation method	Randomised - controlled
Blinding used	Double blind
Roles blinded	Subject, Investigator, Monitor, Carer, Assessor

### Arms

Are arms mutually exclusive?	Yes
<b>Arm title</b>	Placebo

Arm description:

Subjects received BG00011-matching placebo, once weekly by subcutaneous (SC) injection up to a maximum of 46 weeks. Median exposure to placebo was for 19.14 weeks.

Arm type	Placebo
Investigational medicinal product name	Placebo
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Solution for injection in pre-filled syringe
Routes of administration	Subcutaneous use

Dosage and administration details:

Subcutaneous (SC) injection, once weekly.

<b>Arm title</b>	BG00011
------------------	---------

Arm description:

Subjects received BG00011 56 milligram (mg), once weekly by SC injection up to a maximum of 46 weeks. Median exposure to BG00011 was for 17.14 weeks.

Arm type	Experimental
Investigational medicinal product name	BG00011
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Solution for injection in pre-filled syringe
Routes of administration	Subcutaneous use

Dosage and administration details:

SC injection, once weekly.

<b>Number of subjects in period 1</b>	Placebo	BG00011
Started	52	54
Completed	0	0
Not completed	52	54
Disease progression	-	1
Adverse Event	1	1
Death	-	4
Study terminated by sponsor	50	45
Site Terminated by Sponsor	1	1
Reason not specified	-	1
Consent withdrawn	-	1

## Baseline characteristics

### Reporting groups

Reporting group title	Placebo
Reporting group description: Subjects received BG00011-matching placebo, once weekly by subcutaneous (SC) injection up to a maximum of 46 weeks. Median exposure to placebo was for 19.14 weeks.	
Reporting group title	BG00011
Reporting group description: Subjects received BG00011 56 milligram (mg), once weekly by SC injection up to a maximum of 46 weeks. Median exposure to BG00011 was for 17.14 weeks.	

Reporting group values	Placebo	BG00011	Total
Number of subjects	52	54	106
Age categorical Units: Subjects			
Age Continuous Units: years arithmetic mean standard deviation	68.50 ± 6.652	69.46 ± 7.570	-
Sex: Female, Male Units: subjects

## End points

### End points reporting groups

Reporting group title	Placebo
Reporting group description:	
Subjects received BG00011-matching placebo, once weekly by subcutaneous (SC) injection up to a maximum of 46 weeks. Median exposure to placebo was for 19.14 weeks.	
Reporting group title	BG00011
Reporting group description:	
Subjects received BG00011 56 milligram (mg), once weekly by SC injection up to a maximum of 46 weeks. Median exposure to BG00011 was for 17.14 weeks.	

### Primary: Change from Baseline in Forced (Expiratory) Vital Capacity (FVC) at Week 52

End point title	Change from Baseline in Forced (Expiratory) Vital Capacity (FVC) at Week 52 <sup>[1]</sup>
End point description:	
FVC is the total amount of air exhaled during the forced expiratory volume test that is measured during spirometry and is the most important measurement of lung function. This test requires subject to breath into a tube connected to a machine that measures the amount of air that can be moved in and out of the lungs. Change from baseline is defined as post-baseline value minus baseline value. A negative change from baseline indicates decline. MITT population included all subjects who were randomised and received at least 1 dose of study treatment (BG00011 or placebo). 'n' are the subjects who were assessed at the specified timepoint in this endpoint. 'n' at Week 52, are a few subjects whose early termination visit fell into the analysis visit window of the Week 52 visit. No subject received Week 52 dosing.	
End point type	Primary
End point timeframe:	
Baseline, Week 52	
Notes:	
[1] - No statistical analyses have been specified for this primary end point. It is expected there is at least one statistical analysis for each primary end point.	
Justification: Statistical analysis was not performed for this endpoint.	

End point values	Placebo	BG00011		
Subject group type	Reporting group	Reporting group		
Number of subjects analysed	52	54		
Units: litres (L)				
arithmetic mean (standard deviation)				
Baseline (n=52,54)	2.883 (± 0.7037)	2.867 (± 0.8607)		
Change at Week 52 (n=5,4)	-0.308 (± 0.1768)	-0.455 (± 0.2849)		

### Statistical analyses

No statistical analyses for this end point

### Secondary: Change from Baseline in FVC, Expressed in Percent Predicted at Week 52

End point title	Change from Baseline in FVC, Expressed in Percent Predicted at
-----------------	--

## End point description:

FVC is the total amount of air exhaled during the forced expiratory volume test measured during spirometry and is the most important measurement of lung function. It requires subject to breath into a tube connected to a machine that measures the amount of air that can be moved in and out of the lungs after taking an inhaled bronchodilator medicine which is used to dilate subject's bronchial (breathing) tubes. Percent predicted FVC (in %, here FVC was measured in litres) = [(observed FVC)/(predicted FVC)]\*100. Change from baseline is defined as post-baseline value minus baseline value. A negative change from baseline indicates decline. MITT population included all subjects who were randomised and received at least 1 dose of study treatment (BG00011 or placebo). 'n' are the subjects who were assessed at the specified timepoint. 'n' at Week 52, are a few subjects whose early termination visit fell into the analysis visit window of the Week 52 visit. No subject received Week 52 dosing.

arithmetic mean (standard deviation)				
Baseline (n=52,54)	76.1 (± 15.46)	77.4 (± 17.07)		
Change at Week 52 (n=5,4)	-7.6 (± 5.22)	-11.5 (± 6.95)		

## Statistical analyses

No statistical analyses for this end point

## Secondary: Time to Progression

End point title	Time to Progression
-----------------	---------------------

## End point description:

Time to progression is defined by a composite endpoint, including any of the following events: Absolute decline of 10% predicted in FVC (FVC percent predicted (baseline) - FVC percent predicted (progression) ≥10%); Non-elective hospitalization for respiratory events; Lung transplantation or death. The earliest time to meet at least 1 composite criterion was calculated. MITT population included all subjects who were randomised and received at least 1 dose of study treatment (BG00011 or placebo). 'Number of subjects analysed' are the subjects who were assessed in this outcome measure.

End point type	Secondary
----------------	-----------

End point timeframe:

Up to Week 60 (End of Study)

End point values	Placebo	BG00011		
Subject group type	Reporting group	Reporting group		
Number of subjects analysed	8	15		
Units: days				
median (full range (min-max))	127.5 (29 to 235)	119.0 (28 to 302)		

## Statistical analyses

Statistical analysis title	Placebo vs BG00011
Statistical analysis description:	
A cox proportional hazards model with terms for treatment (BG00011 vs. placebo) and randomization stratification factor is used. A stratified log-rank test is used to compare the 2 treatment groups using randomization stratus as the stratification factor. An HR (Hazard Ratio) < 1 indicates lower risk of event for the BG00011 group where HR is based on Cox proportional hazard model with treatment (Placebo, BG00011) as the categorical covariate.	
Comparison groups	Placebo v BG00011

upper limit	4.73

## Secondary: Time to First Acute Idiopathic Pulmonary Fibrosis (IPF) Exacerbation

End point title	Time to First Acute Idiopathic Pulmonary Fibrosis (IPF) Exacerbation
End point description:	
Time to first acute IPF exacerbation is defined as time from randomization to the first occurrence of acute IPF exacerbation. Acute IPF exacerbation is defined as a clinically significant deterioration of unidentifiable cause in a subject with underlying IPF. The diagnostic criteria for IPF used in this study were derived from evidence-based guidelines developed by the American Thoracic Society/European Respiratory Society/Japanese Respiratory Society/Latin American Thoracic Association (ATS/ERS/JRS/ALAT) joint task force for the diagnosis and management of IPF. Participants were assessed according to the modified 2007 diagnostic criteria for acute IPF exacerbation. MITT population included all subjects who were randomised and received at least 1 dose of study treatment (BG00011 or placebo). 'Number of subjects analysed' are the subjects who had at least one acute IPF exacerbation.	
End point type	Secondary
End point timeframe:	
Up to Early Termination Visit (Up to Week 52)

## Secondary: Change from Baseline in 6 Minute Walk Test (6MWT) Parameters

End point title	Change from Baseline in 6 Minute Walk Test (6MWT) Parameters
-----------------	--

End point description:

The 6MWT measures the distance (in meters), a subject is able to walk in 6 minutes. This test measures the distance a person can walk quickly on a flat, hard surface in 6 minutes and reflects an individual's ability to perform daily physical activities. MITT population included all subjects who were randomised and received at least 1 dose of study treatment (BG00011 or placebo). 'n' are subjects with data available for analyses at given timepoint. Subjects at Week 52, are a few subjects whose early termination visit fell into the analysis visit window of the Week 52 visit. No subjects received Week 52 dosing.

## Secondary: Number of Subjects with Adverse Events (AEs) and Serious Adverse Events (SAEs)

End point title	Number of Subjects with Adverse Events (AEs) and Serious Adverse Events (SAEs)
-----------------	--

End point description:

An AE is any untoward medical occurrence in a subject administered a pharmaceutical product and that does not necessarily have a causal relationship with this treatment. An AE can therefore be any

unfavorable and unintended sign (including an abnormal laboratory finding), symptom, or disease temporally associated with the use of a medicinal (investigational) product, whether or not related to the medicinal (investigational) product. An SAE is any untoward medical occurrence that at any dose results in death, requires inpatient hospitalization, results in persistent or significant disability and/or results in a congenital anomaly. The safety population included all subjects who were randomised and receive at least 1 dose of study treatment (BG00011 or placebo).

## Secondary: Concentration of BG00011 in the Serum

End point title	Concentration of BG00011 in the Serum <sup>[4]</sup>
-----------------	--

**End point description:**

Pharmacokinetics (PK) population included all subjects who received at least 1 dose of study treatment and had at least one PK concentration measurement. "n" indicates number of subjects analysed at the give time point. Subjects at Week 52 are a few subjects whose early termination visit fell into the analysis visit window of the Week 52 visit. No participant received Week 52 dosing.

End point type	Secondary
----------------	-----------

**End point timeframe:**

Predose on Day 0, Day 5, Week 4, Week 8, Week 12, Week 26, Week 38, Week 52, and Safety Follow-up Visit (Up to Week 60).

**Notes:**

[4] - The end point is not reporting statistics for all the arms in the baseline period. It is expected all the baseline period arms will be reported on when providing values for an end point on the baseline period. Justification: The serum concentration of BG00011 is measured in subjects in BG00011 arm.

## More information

### Substantial protocol amendments (globally)

Were there any global substantial amendments to the protocol? Yes

Date	Amendment
02 July 2019	The primary reason for this amendment to Protocol 203PF203 is to reflect current modified (2018) American Thoracic Society (ATS) guidelines for idiopathic pulmonary fibrosis (IPF) diagnosis. • The stratification of subjects on background therapy was clarified. • Text was added to clarify that the Investigator should attempt to complete the Investigator's determination of IPF exacerbation as soon as possible. • The exclusion criteria due to current hepatitis C or hepatitis B infection was clarified. • Liver chemistry threshold discontinuation criteria were added. • Dosing can be performed 2 days from the dose schedule. • A subject may continue in the study on their assigned study treatment if background therapy is initiated or adjusted. • The interim analysis when approximately 50% of subjects completed the week 52 visit was removed. A potential interim database lock and its associated interim analysis for efficacy and safety data is added.

Notes:

### Interruptions (globally)

Were there any global interruptions to the trial? No

### Limitations and caveats

Limitations of the trial such as small numbers of subjects analysed or technical problems leading to unreliable data.

The study was terminated early due to safety findings

Notes:
