

Clinical trial results:

A Phase III, Open Label, Randomized, Parallel Group Study to Evaluate the Efficacy and Safety of Intrapleural Administration of Adenovirus-Delivered Interferon Alpha-2b (rAd-IFN) in Combination with Celecoxib and Gemcitabine in Patients with Malignant Pleural Mesothelioma

Summary

EudraCT number	2017-003169-82
Trial protocol	GB DE FR PL IT
Global end of trial date	16 January 2026

Results information

Result version number	v1

Paediatric regulatory details

Is trial part of an agreed paediatric investigation plan (PIP)	No
Does article 45 of REGULATION (EC) No 1901/2006 apply to this trial?	No
Does article 46 of REGULATION (EC) No 1901/2006 apply to this trial?	No

Notes:

Results analysis stage

Analysis stage	Final
Date of interim/final analysis	07 May 2024
Is this the analysis of the primary completion data?	Yes
Primary completion date	07 May 2024
Global end of trial reached?	Yes
Global end of trial date	16 January 2026
Was the trial ended prematurely?	No

Notes:

General information about the trial

Main objective of the trial:

The primary objective of the study is to compare the overall survival associated with rAd-IFN, when administered with celecoxib and gemcitabine, versus that associated with celecoxib and gemcitabine alone for the treatment of patients with MPM who have received a minimum of 1 treatment regimen and a maximum of 2 treatment regimens, 1 of which must have been an anti-folate and platinum combination regimen.

Protection of trial subjects:

The study was conducted in accordance with the Declaration of Helsinki and with all applicable laws and regulations of the locale and country where the study was conducted, and in compliance with Good Clinical Practice Guidelines.

Background therapy: -

Evidence for comparator: -

Actual start date of recruitment	27 August 2019
Long term follow-up planned	No
Independent data monitoring committee (IDMC) involvement?	Yes

Notes:

Population of trial subjects

Subjects enrolled per country

Country: Number of subjects enrolled	Australia: 2
Country: Number of subjects enrolled	Canada: 2
Country: Number of subjects enrolled	Russian Federation: 2
Country: Number of subjects enrolled	United States: 13
Country: Number of subjects enrolled	Poland: 6
Country: Number of subjects enrolled	United Kingdom: 11
Country: Number of subjects enrolled	France: 15
Country: Number of subjects enrolled	Germany: 1
Country: Number of subjects enrolled	Italy: 1
Worldwide total number of subjects	53
EEA total number of subjects	23

Notes:

Subjects enrolled per age group

In utero	0
Preterm newborn - gestational age < 37	0

wk	
Newborns (0-27 days)	0
Infants and toddlers (28 days-23 months)	0
Children (2-11 years)	0
Adolescents (12-17 years)	0
Adults (18-64 years)	12
From 65 to 84 years	40
85 years and over	1

Subject disposition

Recruitment

Recruitment details: -

Pre-assignment

Screening details:

Screening includes assessments to confirm eligibility (review of inclusion/exclusion criteria and review to confirm the MPM diagnosis).

Period 1

Period 1 title	Treatment and follow up (overall period)
Is this the baseline period?	Yes
Allocation method	Randomised - controlled
Blinding used	Not blinded

Arms

Are arms mutually exclusive?	Yes
Arm title	rAd-IFN+Celecoxib+Gemcitabine

Arm description:

Subjects received rAd-IFN, Celecoxib and Gemcitabine.

Arm type	Experimental
Investigational medicinal product name	rAd-IFN
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Concentrate for suspension for injection
Routes of administration	Intrapleural use

Dosage and administration details:

Subjects received 3×10^{11} viral particles on Study Day 1 via intrapleural administration.

Investigational medicinal product name	Celecoxib
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Capsule
Routes of administration	Oral use

Dosage and administration details:

Subjects received 400 mg twice daily on Study Days 1 to 14 administered orally.

Investigational medicinal product name	Gemcitabine
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Powder for solution for infusion
Routes of administration	Intravenous use

Dosage and administration details:

All patients took gemcitabine starting on Study Day 14, using the following treatment regimen: 1250 mg/m² administered intravenously on Days 1 and 8 of a 21 day gemcitabine cycle, unless the cycle was modified due to toxicity/delay, and repeated every 3 weeks until disease progression/End of Trial.

Arm title	Celecoxib+Gemcitabine

occurrences (all)	2	3	
Back pain			
subjects affected / exposed	2 / 27 (7.41%)	1 / 22 (4.55%)	
occurrences (all)	4	1	
Muscular weakness			
subjects affected / exposed	1 / 27 (3.70%)	2 / 22 (9.09%)	
occurrences (all)	1	2	
Infections and infestations			

Urinary tract infection			
subjects affected / exposed	5 / 27 (18.52%)	0 / 22 (0.00%)	
occurrences (all)	5	0	
Lower respiratory tract infection			
subjects affected / exposed	2 / 27 (7.41%)	1 / 22 (4.55%)	
occurrences (all)	3	1	
Oral candidiasis			
subjects affected / exposed	1 / 27 (3.70%)	2 / 22 (9.09%)	
occurrences (all)	1	3	
Cystitis			
subjects affected / exposed	2 / 27 (7.41%)	0 / 22 (0.00%)	
occurrences (all)	4	0	
Viral upper respiratory tract infection			
subjects affected / exposed	2 / 27 (7.41%)	0 / 22 (0.00%)	
occurrences (all)	2	0	
Metabolism and nutrition disorders			
Decreased appetite			
subjects affected / exposed	6 / 27 (22.22%)	6 / 22 (27.27%)	
occurrences (all)	9	9	
Hypoalbuminaemia			
subjects affected / exposed	3 / 27 (11.11%)	2 / 22 (9.09%)	
occurrences (all)	4	2	
Hyponatraemia			
subjects affected / exposed	2 / 27 (7.41%)	2 / 22 (9.09%)	
occurrences (all)	3	2	
Hyperglycaemia			
subjects affected / exposed	1 / 27 (3.70%)	2 / 22 (9.09%)	
occurrences (all)	1	2	
Hypokalaemia			
subjects affected / exposed	2 / 27 (7.41%)	1 / 22 (4.55%)	
occurrences (all)	2	2	
Hypomagnesaemia			
subjects affected / exposed	1 / 27 (3.70%)	2 / 22 (9.09%)	
occurrences (all)	2	2	
Hypophosphataemia			

subjects affected / exposed	2 / 27 (7.41%)	1 / 22 (4.55%)	
occurrences (all)	3	1	

More information

Substantial protocol amendments (globally)

Were there any global substantial amendments to the protocol? Yes

Date	Amendment
28 April 2021	The most important changes to the protocol are as follows: 1. Information on the discontinuation of enrollment into the trial has been added. 2. Information on statistical analysis and sample size determination have been updated in accordance with the lower number of trial subjects. 3. The two interim analyses have been removed from the protocol. 4. The expected time point for study completion has been amended. Please note that the definition of study completion remains unchanged as the "date of final statistical analysis". However, the final statistical analysis will now be conducted after the forty-fourth event (death) or 30 months after the last patient is randomized, whichever occurs first. 5. A risk assessment for concomitant use of a COVID-19 vaccine for each IMP with specific consideration for the trial population has been added.
13 July 2023	Updates to the protocol include the following changes: • Modified end of study (study completion)-definition • Addition of a final statistical analysis comprised of an overall survival analysis. • Update of the Sponsor's address (as notified previously) • Other minor edits were made throughout the document to correct grammatical errors and inconsistencies.
11 December 2023	Updates to the protocol include the following changes: • Following disease progression/ET, patients in the rAd-IFN treatment group will be followed every 6 months (± 14 days) for survival and safety for up to 5 years after receiving the first dose of rAd-IFN • Patients in the control group will not continue in the clinical Follow-up phase and study participation will conclude after end of study treatment. • Other minor edits were made throughout the document to correct grammatical errors and inconsistencies.

Notes:

Interruptions (globally)

Were there any global interruptions to the trial? No

Limitations and caveats

None reported
