Notes:

**Paediatric regulatory details**

Is trial part of an agreed paediatric investigation plan (PIP)	No
Does article 45 of REGULATION (EC) No 1901/2006 apply to this trial?	No
Does article 46 of REGULATION (EC) No 1901/2006 apply to this trial?	No

Notes:

## Results analysis stage

Analysis stage	Final
Date of interim/final analysis	18 February 2020
Is this the analysis of the primary completion data?	No
Global end of trial reached?	Yes
Global end of trial date	30 January 2020
Was the trial ended prematurely?	No

Notes:

## General information about the trial

Main objective of the trial:

The primary objectives of this study are to characterize the dose-response relationship with respect to efficacy of Padsevonil (PSL) administered concomitantly with up to 3 anti-epileptic drugs (AEDs) for treatment of observable focal-onset seizures in subjects with drug-resistant epilepsy and to evaluate the efficacy of the 4 selected dose regimens of PSL compared with placebo.

Protection of trial subjects:

During the conduct of the study all participants were closely monitored.

Background therapy:

Background therapy as permitted in the protocol.

Evidence for comparator:

Not applicable

Actual start date of recruitment	12 February 2018
Long term follow-up planned	Yes
Long term follow-up rationale	Safety
Long term follow-up duration	27 Months
Independent data monitoring committee (IDMC) involvement?	Yes

Notes:

## Population of trial subjects

### Subjects enrolled per country

Country: Number of subjects enrolled	Australia: 13
Country: Number of subjects enrolled	Belgium: 11
Country: Number of subjects enrolled	Bulgaria: 42
Country: Number of subjects enrolled	Canada: 8
Country: Number of subjects enrolled	Czechia: 27
Country: Number of subjects enrolled	France: 27
Country: Number of subjects enrolled	Germany: 46
Country: Number of subjects enrolled	Hungary: 14
Country: Number of subjects enrolled	Italy: 25
Country: Number of subjects enrolled	Japan: 27
Country: Number of subjects enrolled	Lithuania: 11
Country: Number of subjects enrolled	Mexico: 5
Country: Number of subjects enrolled	Poland: 28
Country: Number of subjects enrolled	Slovakia: 6
Country: Number of subjects enrolled	Spain: 62
Country: Number of subjects enrolled	Turkey: 5

Country: Number of subjects enrolled	United Kingdom: 9
Country: Number of subjects enrolled	United States: 45
Worldwide total number of subjects	411
EEA total number of subjects	299

Notes:

<b>Subjects enrolled per age group</b>	
In utero	0
Preterm newborn - gestational age < 37 wk	0
Newborns (0-27 days)	0
Infants and toddlers (28 days-23 months)	0
Children (2-11 years)	0
Adolescents (12-17 years)	0
Adults (18-64 years)	401
From 65 to 84 years	10
85 years and over	0

## Subject disposition

### Recruitment

Recruitment details:

The study started to enroll patients in February 2018 and concluded in January 2020.

### Pre-assignment

Screening details:

The study included: a 4-week Baseline Period, a 16-week Treatment Period, a 4-week Taper Period (for participants who discontinued or choose not to enroll in the open-label extension study) and a Safety Follow-up Period. Participants continuing to the OLE study had a 3-week Conversion Period.

Participant Flow refers to the Randomized Set.

### Period 1

Period 1 title	Treatment period: Wk0-16
Is this the baseline period?	Yes
Allocation method	Randomised - controlled
Blinding used	Double blind
Roles blinded	Carer, Subject, Investigator, Assessor

### Arms

Are arms mutually exclusive?	Yes
<b>Arm title</b>	Placebo

Arm description:

Participants randomized to the placebo group received a combination of several Placebo tablets to maintain the blinding.

Arm type	Placebo
Investigational medicinal product name	Placebo
Investigational medicinal product code	PBO
Other name	
Pharmaceutical forms	Film-coated tablet
Routes of administration	Oral use

Dosage and administration details:

Placebo was provided as tablets of matching size and aspect to Padsevonil tablets allowing a double-blind packaging. All study participants were instructed to take 5 or 6 tablets containing either PSL or placebo bid, approximately 12 hours apart. The IMP was to be dosed within 30 minutes after food when practically feasible.

<b>Arm title</b>	Padsevonil dosing regimen 1
------------------	-----------------------------

Arm description:

Participants were randomized to receive a combination of tablets of Padsevonil dose 1 and Placebo (as appropriate) to maintain the blinding.

Arm type	Experimental
Investigational medicinal product name	Padsevonil
Investigational medicinal product code	PSL
Other name	
Pharmaceutical forms	Film-coated tablet
Routes of administration	Oral use

Dosage and administration details:

Padsevonil was administered as film-coated tablets of different doses, sizes and appearance. All study participants were instructed to take 5 or 6 tablets containing either PSL or placebo bid, approximately 12 hours apart. The IMP was to be dosed within 30 minutes after food when practically feasible.

<b>Arm title</b>	Padsevonil dosing regimen 2
------------------	-----------------------------

Arm description:

Participants were randomized to receive a combination of tablets of Padsevonil dose 2 and Placebo (as

appropriate) to maintain the blinding.

Arm type	Experimental
Investigational medicinal product name	Padsevonil
Investigational medicinal product code	PSL
Other name	
Pharmaceutical forms	Film-coated tablet
Routes of administration	Oral use

Dosage and administration details:

Padsevonil was administered as film-coated tablets of different doses, sizes and appearance. All study participants were instructed to take 5 or 6 tablets containing either PSL or placebo bid, approximately 12 hours apart. The IMP was to be dosed within 30 minutes after food when practically feasible.

<b>Arm title</b>	Padsevonil dosing regimen 3
------------------	-----------------------------

Arm description:

Participants were randomized to receive a combination of tablets of Padsevonil dose 3 and Placebo (as appropriate) to maintain the blinding.

Arm type	Experimental
Investigational medicinal product name	Padsevonil
Investigational medicinal product code	PSL
Other name	
Pharmaceutical forms	Film-coated tablet
Routes of administration	Oral use

Dosage and administration details:

Padsevonil was administered as film-coated tablets of different doses, sizes and appearance. All study participants were instructed to take 5 or 6 tablets containing either PSL or placebo bid, approximately 12 hours apart. The IMP was to be dosed within 30 minutes after food when practically feasible.

<b>Arm title</b>	Padsevonil dosing regimen 4
------------------	-----------------------------

Arm description:

Participants were randomized to receive a combination of tablets of Padsevonil dose 4 and Placebo (as appropriate) to maintain the blinding.

Arm type	Experimental
Investigational medicinal product name	Padsevonil
Investigational medicinal product code	PSL
Other name	
Pharmaceutical forms	Film-coated tablet
Routes of administration	Oral use

Dosage and administration details:

Padsevonil was administered as film-coated tablets of different doses, sizes and appearance. All study participants were instructed to take 5 or 6 tablets containing either PSL or placebo bid, approximately 12 hours apart. The IMP was to be dosed within 30 minutes after food when practically feasible.

Notes:

[1] - The number of subjects at this milestone seems inconsistent with the number of subjects in the arm. It is expected that the number of subjects will be greater than, or equal to the number that completed, minus those who left.

Justification: Number of participants at this milestone reflect those who were randomized to Placebo and entered to conversion period, completed conversion period, had taper and safety follow-up or enrolled in EP0093. Participants could enter taper and safety follow-up after period 1.

[2] - The number of subjects at this milestone seems inconsistent with the number of subjects in the arm. It is expected that the number of subjects will be greater than, or equal to the number that completed, minus those who left.

Justification: Number of participants at this milestone reflect those who were randomized to Padsevonil dosing regimen 1 and entered to conversion period, completed conversion period, had taper and safety follow-up or enrolled in EP0093. Participants could enter taper and safety follow-up after period 1.

[3] - The number of subjects at this milestone seems inconsistent with the number of subjects in the arm. It is expected that the number of subjects will be greater than, or equal to the number that completed, minus those who left.

Justification: Number of participants at this milestone reflect those who were randomized to Padsevonil dosing regimen 2 and entered to conversion period, completed conversion period, had taper and safety follow-up or enrolled in EP0093. Participants could enter taper and safety follow-up after period 1.

[4] - The number of subjects at this milestone seems inconsistent with the number of subjects in the arm. It is expected that the number of subjects will be greater than, or equal to the number that completed, minus those who left.

Justification: Number of participants at this milestone reflect those who were randomized to Padsevonil dosing regimen 3 and entered to conversion period, completed conversion period, had taper and safety follow-up or enrolled in EP0093. Participants could enter taper and safety follow-up after period 1.

[5] - The number of subjects at this milestone seems inconsistent with the number of subjects in the

arm. It is expected that the number of subjects will be greater than, or equal to the number that completed, minus those who left.

Justification: Number of participants at this milestone reflect those who were randomized to Padsevonil dosing regimen 4 and entered to conversion period, completed conversion period, had taper and safety follow-up or enrolled in EP0093. Participants could enter taper and safety follow-up after period 1.

## Period 2

Period 2 title	Post-Treatment period: Wk16-23
Is this the baseline period?	No
Allocation method	Randomised - controlled
Blinding used	Double blind
Roles blinded	Carer, Investigator, Assessor, Subject

Subject analysis set title	Padsevonil dosing regimen 4 Conversion period (SS)
Subject analysis set type	Safety analysis

Subject analysis set description:

A 3-week Conversion Period was required for study participants who chose to enroll in the OLE study at the end of the 12-week Maintenance Period. The dose for participants initially randomized to Padsevonil dose 4 was gradually adapted (increased or decreased) in a blinded way to reach the entry dose for the OLE. Participants formed the SS.

Subject analysis set title	Placebo Taper and SFU period (SS)
Subject analysis set type	Safety analysis

Subject analysis set description:

A 4-week Taper Period was required for participants who chose not to enroll in the OLE study or who discontinued prior to the end of the 12-week Maintenance Period. Participants initially randomized to Placebo have been gradually tapered off the IMP over a 3-week period followed by 1-week drug-free period.

Afterwards, participants had a Safety Follow-Up visit 30 days after the last IMP intake. Participants formed the Safety Set (SS).

Subject analysis set title	Padsevonil dosing regimen 1 Taper and SFU period (SS)
Subject analysis set type	Safety analysis

Subject analysis set description:

A 4-week Taper Period was required for participants who chose not to enroll in the OLE study or who discontinued prior to the end of the 12-week Maintenance Period. Participants initially randomized to Padsevonil dose 1 have been gradually tapered off the IMP over a 3-week period followed by 1-week drug-free period.

Afterwards, participants had a Safety Follow-Up visit 30 days after the last IMP intake. Participants formed the SS.

## Secondary: Change in log-transformed observable focal onset seizure frequency from Baseline over the 12 week Maintenance Period

End point title	Change in log-transformed observable focal onset seizure frequency from Baseline over the 12 week Maintenance Period
-----------------	--

End point description:

During the study, participants kept diaries to record daily seizure activity. Seizure frequency refers to 28-day adjusted frequency. Seizure frequency was based on investigator assessment of participants' reports of daily seizure type and frequency. Observable focal-onset seizures refer to Type IA1, IB, and IC (ILAE Classification of Epileptic Seizures, 1981). Based on ANCOVA on change in log-transformed, 28-day adjusted seizure frequency from Baseline with treatment group as the main factor, Baseline log-transformed seizure frequency as a continuous covariate, Baseline SV2A use (yes or no) and Region (Europe, Non-Europe) as categorical factors.

The Full Analysis Set (FAS) consisted of all study participants in the RS who were administered at least 1 dose or a partial dose of IMP and had Baseline and at least 1 post-Baseline seizure frequency data during the 16-week Treatment Period.

End point type	Secondary

## Adverse events

### Adverse events information

Timeframe for reporting adverse events:

Treatment-emergent AEs were collected from Baseline to Safety Follow-Up (up to Week 23)

Adverse event reporting additional description:

Adverse events refer to the SS which consisted of all participants who were administered at least 1 dose or a partial dose of IMP.

TEAEs counts are for each study period: Treatment Period, Conversion Period for participants who entered the OLE study and Taper Period followed by SFU for participants not entering OLE study.

Assessment type	Non-systematic

During the Treatment period, participants were randomized to receive a combination of tablets of Padsevonil dose 3 and Placebo (as appropriate) to maintain the blinding. Participants formed the SS.

Reporting group title	Padsevonil dosing regimen 4 Treatment period (SS)
-----------------------	---

Reporting group description:

During the Treatment period, participants were randomized to receive a combination of tablets of Padsevonil dose 4 and Placebo (as appropriate) to maintain the blinding. Participants formed the SS.

Reporting group title	Padsevonil dosing regimen 1 Conversion period (SS)
-----------------------	--

Reporting group description:

A 3-week Conversion Period was required for study participants who chose to enroll in the OLE study at the end of the 12-week Maintenance Period. The dose for participants initially randomized to Padsevonil dose 1 was gradually adapted (increased or decreased) in a blinded way to reach the entry dose for the OLE. Participants formed the SS.

Reporting group title	Placebo Conversion period (SS)
-----------------------	--------------------------------

Reporting group description:

A 3-week Conversion Period was required for study participants who chose to enroll in the OLE study at the end of the 12-week Maintenance Period. Participants initially randomized to Placebo progressively received Padsevonil in a blinded way to reach the entry dose for the OLE. Participants formed the Safety Set (SS).

Reporting group title	Padsevonil dosing regimen 2 Conversion period (SS)
-----------------------	--

Reporting group description:

A 3-week Conversion Period was required for study participants who chose to enroll in the OLE study at the end of the 12-week Maintenance Period. The dose for participants initially randomized to Padsevonil dose 2 was gradually adapted (increased or decreased) in a blinded way to reach the entry dose for the OLE. Participants formed the SS.

Reporting group title	Padsevonil dosing regimen 3 Conversion period (SS)
-----------------------	--

#### Reporting group description:

A 3-week Conversion Period was required for study participants who chose to enroll in the OLE study at the end of the 12-week Maintenance Period. The dose for participants initially randomized to Padsevonil dose 3 was gradually adapted (increased or decreased) in a blinded way to reach the entry dose for the OLE. Participants formed the SS.

Reporting group title	Padsevonil dosing regimen 4 Conversion period (SS)
-----------------------	--

#### Reporting group description:

A 3-week Conversion Period was required for study participants who chose to enroll in the OLE study at the end of the 12-week Maintenance Period. The dose for participants initially randomized to Padsevonil dose 4 was gradually adapted (increased or decreased) in a blinded way to reach the entry dose for the OLE. Participants formed the SS.

Reporting group title	Placebo Taper and SFU period (SS)
-----------------------	-----------------------------------

#### Reporting group description:

A 4-week Taper Period was required for participants who chose not to enroll in the OLE study or who discontinued prior to the end of the 12-week Maintenance Period. Participants initially randomized to Placebo have been gradually tapered off the IMP over a 3-week period followed by 1-week drug-free period.

Afterwards, participants had a Safety Follow-Up visit 30 days after the last IMP intake. Participants formed the Safety Set (SS).

Reporting group title	Padsevonil dosing regimen 1 Taper and SFU period (SS)
-----------------------	---

#### Reporting group description:

A 4-week Taper Period was required for participants who chose not to enroll in the OLE study or who discontinued prior to the end of the 12-week Maintenance Period. Participants initially randomized to Padsevonil dose 1 have been gradually tapered off the IMP over a 3-week period followed by 1-week drug-free period.

Afterwards, participants had a Safety Follow-Up visit 30 days after the last IMP intake. Participants formed the SS.

Reporting group title	Padsevonil dosing regimen 2 Taper and SFU period (SS)
-----------------------	---

#### Reporting group description:

A 4-week Taper Period was required for participants who chose not to enroll in the OLE study or who discontinued prior to the end of the 12-week Maintenance Period. Participants initially randomized to Padsevonil dose 2 have been gradually tapered off the IMP over a 3-week period followed by 1-week drug-free period.

Afterwards, participants had a Safety Follow-Up visit 30 days after the last IMP intake. Participants formed the SS.

Reporting group title	Padsevonil dosing regimen 3 Taper and SFU period (SS)
-----------------------	---

#### Reporting group description:

A 4-week Taper Period was required for participants who chose not to enroll in the OLE study or who discontinued prior to the end of the 12-week Maintenance Period. Participants initially randomized to Padsevonil dose 3 have been gradually tapered off the IMP over a 3-week period followed by 1-week drug-free period.

## More information

### Substantial protocol amendments (globally)

Were there any global substantial amendments to the protocol? Yes

Date	Amendment
09 March 2018	<p>Protocol Amendment 1, dated 09 Mar 2018, provided the following key changes:</p> <p>The purpose of this substantial amendment was primarily to increase the potential for the study to be 1 of 2 adequate and well-controlled studies that supported registration. This required an increase in the sample size to allow for pairwise comparisons and the use of the 75% responder rate status as the primary variable for the European Medicines Agency (EMA) (CHMP/EWP/566/98 Rev.2/Corr, 2010). Per EMA guidance, the primary variable in add-on epilepsy studies should have dichotomized the data into responders/nonresponders, where responders were participants who obtained at least a certain predefined percentage reduction of seizure frequency. An improvement of &gt;75% was regarded as clinically more meaningful than &gt;50% and seemed feasible given the premise of greater efficacy of Padsevonil based upon nonclinical animal data and EP0069 results. Therefore, the 75% responder rate was selected as the primary variable, rather than the more commonly used 50% responder rate.</p> <p>Another important addition to the protocol was that the Data Monitoring Committee (DMC) could stop enrollment into a Padsevonil dose arm for safety and tolerability reasons and allocate remaining patients to remaining Padsevonil dose or placebo arms. This addition did not reflect a change in intent. Rather, the plan had been to describe this possibility in the Data Monitoring Committee (DMC) Charter, but it was included in the protocol to avoid disruption to the study via a subsequent amendment in the unlikely event that a dose arm was dropped from the study for safety/tolerability reasons.</p>
12 October 2018	<p>Protocol Amendment 2, dated 12 Oct 2018, provided the following key changes:</p> <p>The purpose of this substantial amendment was to clarify that the primary efficacy analysis was comparing each Padsevonil dose to placebo with Type I error controlled for all comparisons. Multiple Comparison Procedure-Modelling (MCP-Mod) analysis was removed since it would no longer contribute to the overall study conclusion and dose selection for future studies.</p> <p>Other changes included the following:</p> <ul style="list-style-type: none"><li>• Updates to study contact information.</li><li>• Minor refinements to the wording describing responder rate variables.</li><li>• Correction of the maximum duration of exposure to PSL from 20 to 19 weeks.</li><li>• Clarification of the rationale for the study to state that dose-response relationship was evaluated with respect to safety as well as efficacy.</li><li>• Revised other efficacy variable, number of seizure-free days to percentage of seizure-free days.</li><li>• Revised other efficacy variable, time to return to baseline observable (Type IA1+IB+IC) focal-onset seizure frequency to time to return to baseline 28-day observable seizure count.</li><li>• Revision of designation of treatment-emergent adverse events (TEAEs), TEAEs leading to withdrawal, and SAEs from "safety variables" to "primary safety variables." A heading was added for these primary variables.</li><li>• Clarification of a Schedule of Assessments footnote that questionnaires should have been completed prior to other study procedures, when possible. Previously it was mandated that these be completed prior to other procedures.</li><li>• Removal of efficiencies of the MCP-Mod model based design and analysis as 1 of the drivers for EP0091 dose selection. In addition, the rationale for selection of intermediate doses was revised due to the elimination of MCP-Mod analysis.</li><li>• Revision of Inclusion Criterion 2 to account for the fact that use of legal representative/caregiver may not have been legally permitted in some countries.</li></ul>

12 October 2018	<p>Continuation of Protocol Amendment 2 (1)</p> <ul style="list-style-type: none"> <li>• Modification of Inclusion Criterion 5 to facilitate the acceptance of ambulatory electroencephalograms (EEGs), which were used more frequently in some regions, to require (must versus should) consultation with the UCB Study Physician or representative when determining study participant eligibility based on eye-witness seizure report, home video documentation, or other proof, and to allow substitution of head computed tomography (CT) scan for magnetic resonance imaging (MRI) if MRI was contraindicated.</li> <li>• Modification of Exclusion Criterion 1 to allow rescreening of study participants under certain circumstances.</li> <li>• Clarification of the description of the interpretation of echocardiograms <ul style="list-style-type: none"> <li>– The original description stated that the echocardiograms would be interpreted at the sites by local cardiologists and then provided to a central reader where they would be interpreted. Given that all echocardiograms were to be centrally read and a report provided within 7 business days of receipt, in the absence of queries, there was no need for a local cardiologist. Therefore, the protocol was modified to say that it was only necessary that the local physician examine the echocardiograms for suitability for central reading and for determination if an expedited review by the central reader was required.</li> </ul> </li> </ul> <p>It was also made explicit that the central reader was a cardiologist.</p> <ul style="list-style-type: none"> <li>• Clarification of the Titration Period Dosing Table 7-1 in the protocol, to indicate that this period consisted of Week 1, Week 2, and Week 3 (versus previous unclear designations of Day 1, Week 1 and Week 2).</li> <li>• Clarifications regarding administration of the Seizure Severity Global Item (SSG), Quality of Life Inventory in Epilepsy-31-P (QOLIE-31-P), and Hospital Anxiety and Depression Scale (HADS).</li> </ul>
12 October 2018	<p>Continuation of Protocol Amendment 2 (2)</p> <ul style="list-style-type: none"> <li>• Other modifications to the Statistics section (in addition to those related to the removal of MCP-Mod analysis), such as inclusion of information on handling of dropouts and missing data and further details about the determination of sample size.</li> </ul>

Notes:

## Interruptions (globally)

Were there any global interruptions to the trial? No

## Limitations and caveats

None reported
