

Clinical trial results:

Effect of semaglutide once-weekly versus insulin aspart three times daily, both as add on to metformin and optimised insulin glargine (U100) in subjects with type 2 diabetes

A 52-week, multi-centre, multinational, open-label, activecontrolled, two armed, parallel-group, randomised trial in subjects with type 2 diabetes
Summary

Paediatric regulatory details

Is trial part of an agreed paediatric investigation plan (PIP)	No
Does article 45 of REGULATION (EC) No 1901/2006 apply to this trial?	No
Does article 46 of REGULATION (EC) No 1901/2006 apply to this trial?	No

Notes:

Results analysis stage

Analysis stage	Final
Date of interim/final analysis	01 September 2021
Is this the analysis of the primary completion data?	No
Global end of trial reached?	Yes
Global end of trial date	22 February 2021
Was the trial ended prematurely?	No

Notes:

General information about the trial

Main objective of the trial:

To compare the effect of once-weekly semaglutide subcutaneously (s.c.) on glycaemic control versus insulin aspart three times daily, both as add on to metformin and optimised insulin glargine (U100) in subjects with type 2 diabetes (T2D).

Protection of trial subjects:

The trial was conducted in accordance with the Declaration of Helsinki (2013) and International Council for Harmonisation (ICH) Good Clinical Practice (2016), including archiving of essential documents, EN ISO 14155 and 21 US Code of Federal Regulations (CFR) 312.120.

Background therapy: -

Evidence for comparator: -

Actual start date of recruitment	01 October 2018
Long term follow-up planned	No
Independent data monitoring committee (IDMC) involvement?	No

Notes:

Subjects enrolled per age group	
In utero	0
Preterm newborn - gestational age < 37 wk	0
Newborns (0-27 days)	0
Infants and toddlers (28 days-23 months)	0
Children (2-11 years)	0
Adolescents (12-17 years)	0
Adults (18-64 years)	1422
From 65 to 84 years	849
85 years and over	3

Subject disposition

Recruitment

Recruitment details:

Trial conducted at 209 sites (21 countries): Bosnia-Herzegovina (3), Bulgaria (9), Croatia (7), Czech Republic (7), Estonia (5), Germany (25), Greece (14), Hungary (8), India (20), Latvia (7), Lithuania (6), Macedonia (3), Poland (20), Portugal (6), Romania (7), Serbia (14), Slovakia (9), Slovenia (6), South Africa (11), Spain (8) and Turkey (14).

Pre-assignment

Screening details:

This trial consisted of 12-week run-in, 52-week treatment period and subjects were followed up 5 weeks for safety. Subjects were randomised 1:1 to receive treatment with: metformin + insulin glargine (IGlar) U100 + once-weekly semaglutide subcutaneously (s.c). or metformin + insulin glargine U100 + mealtime insulin aspart s.c. three times daily.

Period 1

Period 1 title	Run-in period (12 weeks)
Is this the baseline period?	No
Allocation method	Not applicable
Blinding used	Not blinded

Arms

Arm title	All subjects
-----------	--------------

Arm description:

During run-in period insulin glargine in combination with metformin was to be optimised. All enrolled subjects received metformin orally and IGlar U100 s.c. injection in run-in period. Metformin was optimised in dose range of greater than or equal to (\geq) 1500 milligrams (mg) to less than or equal to (\leq) 3000 mg. After run-in period, subjects were randomised 1:1 to receive add-on treatment with semaglutide once weekly or insulin aspart three times daily (TID) in treatment period.

Arm type	Experimental
Investigational medicinal product name	Insulin glargine
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Solution for injection
Routes of administration	Subcutaneous use

Dosage and administration details:

subjects received IGlar U100 s.c. injection.

Number of subjects in period 1	All subjects
Started	2274
Completed	1748
Not completed	526
Run-in failure	526

Period 2

Period 2 title	Treatment Period (Week 0 to 52)
Is this the baseline period?	Yes ^[1]
Allocation method	Randomised - controlled
Blinding used	Not blinded

Arms

Are arms mutually exclusive?	Yes
Arm title	Semaglutide

Arm description:

Subjects received metformin, IGlax U100 and semaglutide up to week 52. Metformin dose was maintained at same level and frequency as optimised in run-in period unless safety concern related to background medication arose; IGlax U100 dose was adjusted in run-in period, increases in IGlax U100 dose was based on mean of 3 prebreakfast self-measured plasma glucose (SMPG) values obtained on day of visit/telephone contact and 2 days before contact and dose reduction of IGlax U100 was considered in accordance with approved local label to reduce risk of hypoglycaemia. Subjects self-administered s.c. injection of semaglutide at an initiation dose of 0.25 mg once weekly, after 4 weeks dose was increased to 0.5 mg, and 1 mg after at least 4 weeks to further improve glycaemic control, at investigator's discretion. Dose reduction from 1 to 0.5 mg was allowed in case of safety concern/unacceptable intolerability. Subjects were followed up for 5 weeks (week 57) for safety.

Arm type	Experimental
Investigational medicinal product name	Insulin glargine
Investigational medicinal product code	
Other name	Lantus®
Pharmaceutical forms	Solution for injection
Routes of administration	Subcutaneous use

Dosage and administration details:

IGlax U100 dose was adjusted in run-in period, increases in IGlax U100 dose was based on mean of 3 prebreakfast SMPG values obtained on day of visit/telephone contact and 2 days before contact and dose reduction of IGlax U100 was considered in accordance with approved local label to reduce risk of hypoglycaemia.

Investigational medicinal product name	Semaglutide
Investigational medicinal product code	
Other name	Ozempic®
Pharmaceutical forms	Solution for injection
Routes of administration	Subcutaneous use

Dosage and administration details:

Subjects self-administered s.c. injection of semaglutide at an initiation dose of 0.25 mg once weekly, after 4 weeks dose was increased to 0.5 mg, and 1 mg after at least 4 weeks to further improve glycaemic control, at investigator's discretion. Dose reduction from 1 to 0.5 mg was allowed in case of safety concern/unacceptable intolerability.

Arm title	Insulin Aspart
------------------	----------------

Arm description:

Subjects received metformin, IGlax U100 and insulin aspart up to week 52. Metformin dose was maintained at same level and frequency as optimised in run-in period unless safety concern related to background medication arose; IGlax U100 dose was adjusted in run-in period, increases in IGlax U100 dose was based on mean of 3 prebreakfast SMPG values obtained on day of visit/telephone contact and 2 days before contact and dose reduction of IGlax U100 was considered in accordance with approved local label to reduce risk of hypoglycaemia. Subjects self-administered s.c. injection of insulin aspart at an initiation dose of 4 units three times daily, dose adjustments were considered twice weekly based on pre-prandial and bedtime SMPG from the preceding 3 days and the individualised goal according to investigator's discretion. Subjects were followed up for 5 weeks (week 57) for safety.

Arm type	Active comparator
----------	-------------------

Investigational medicinal product name	Insulin aspart
Investigational medicinal product code	
Other name	NovoRapid®/NovoLog®
Pharmaceutical forms	Solution for injection
Routes of administration	Subcutaneous use

Dosage and administration details:

Subjects self-administered s.c. injection of insulin aspart at an initiation dose of 4 units three times daily, dose adjustments were considered twice weekly based on pre-prandial and bedtime SMPG from the preceding 3 days and the individualised goal according to investigator's discretion.

Investigational medicinal product name	Insulin glargine
Investigational medicinal product code	
Other name	Lantus®
Pharmaceutical forms	Solution for injection
Routes of administration	Subcutaneous use

Dosage and administration details:

IGlar U100 dose was adjusted in run-in period, increases in IGlar U100 dose was based on mean of 3 prebreakfast SMPG values obtained on day of visit/telephone contact and 2 days before contact and dose reduction of IGlar U100 was considered in accordance with approved local label to reduce risk of hypoglycaemia.

Notes:

[1] - Period 1 is not the baseline period. It is expected that period 1 will be the baseline period.

Justification: Baseline data was collected only for randomised subject in treatment period.

Number of subjects in period 2^[2]	Semaglutide	Insulin Aspart
Started	874	874
Completed	850	831
Not completed	24	43
Consent withdrawn by subject	10	38
Death	11	1
Lost to follow-up	3	4

Notes:

[2] - The number of subjects reported to be in the baseline period are not the same as the worldwide number enrolled in the trial. It is expected that these numbers will be the same.

Justification: Period 1 was run-in period, baseline data was collected only for subjects randomised in treatment period.

Baseline characteristics

Statistical analyses

Statistical analysis title	Semaglutide versus insulin aspart
Statistical analysis description:	
The responses were analysed using an ANCOVA with treatment as fixed factor and baseline value as a covariate. Before analysis, missing data were multiple imputed using observed data from subjects within the same group defined by randomised treatment, using a regression model including randomised treatment group and data from baseline and all previous visits as covariates. The prespecified non inferiority margin was 0.3%-point.	
Comparison groups	Semaglutide v Insulin Aspart
Number of subjects included in analysis	1578
Analysis specification	Pre-specified
Analysis type	non-inferiority
P-value	< 0.0001 ^[1]
Method	t-distributed test
Parameter estimate	Treatment difference
Point estimate	-0.29

Adverse events

Adverse events information

Timeframe for reporting adverse events:

From week 0 to week 52

Adverse event reporting additional description:

All presented adverse events (AEs) are treatment-emergent (i.e., TEAEs). TEAEs were defined as AEs with onset during the 'on-treatment' observation period. Results are based on the safety analysis set (SAS) which included all subjects exposed to at least one dose of trial product.
