Notes:

General information about the trial

Main objective of the trial:

Primary objectives:
- To evaluate the safety and tolerability of 24 weeks of treatment with multiple intravenous (IV) doses of 10 mg/kg CFZ533 as an add-on therapy of CFZ533 to standard of care in moderately active lupus nephritis (LN) patients
- To assess the effect of CFZ533 on renal proteinuria using urinary protein creatinine ratio (UPCR) in moderately active LN patients after 24 weeks of treatment as an add-on therapy to standard of care as compared to placebo

Protection of trial subjects:

The study was in compliance with the ethical principles derived from the Declaration of Helsinki and the International Conference on Harmonization (ICH) Good Clinical Practice (GCP) guidelines. All the local regulatory requirements pertinent to safety of trial subjects were also followed during the conduct of the trial.

Primary: Ratio to Baseline in Urinary protein creatinine ratio (UPCR)

End point title	Ratio to Baseline in Urinary protein creatinine ratio (UPCR)

End point description:

A urine protein creatinine ratio (UPCR) test is a urine test. It measures the levels of protein and creatinine in urine. UPCR was assessed using the first morning void if available at a visit otherwise using the clinic spot sample, and was expressed as protein/creatinine (mg/mmol). High UPCR values can be a sign of kidney disease. An UPCR ratio to baseline <1 indicates improvement from baseline.

Urine was tested using a dipstick. If the dipstick result was positive for protein, nitrite, leucocytes and/or blood, a microscopic analysis of white blood cells (WBC), red blood cells (RBC) and casts was performed. Hematuria is the presence of blood in the urine. Hematuria casts were assessed by microscopic

urinalysis and classified as granular casts and WBC casts. Only in the event of a positive result, these samples were submitted to reflex testing microscopic analysis for counting of casts which resulted in a numeric value related to the number of respective casts presented in the urine.The Number of Subjects Analyzed differs as stated on the category column, in case of difference from Number of subjects that started the Arm. Substantial protocol amendments (globally)

Were there any global substantial amendments to the protocol? Yes

Date	Amendment
30 August 2018	The key purpose of this amendment was to: i) To address the comments received from Health Authorities in response to the Sponsors clinical trial application (CTA) submission. ii) To adapt the protocol to allow enrollment of patients with a histologic diagnosis of class III/IV lupus nephritis within 5 years (instead of 2 years). iii) To correct inconsistencies, errors or typos and to improve clarity.
