

Clinical trial results: High-Resolution Assessment of Coronary Plaques in a Global Evolocumab Randomized Study (HUYGENS)

Summary

EudraCT number	2017-003236-37
Trial protocol	CZ HU IT
Global end of trial date	21 January 2021

Results information

Result version number	v1 (current)
This version publication date	12 November 2021
First version publication date	12 November 2021

Trial information

Trial identification

Sponsor protocol code	20160184
-----------------------	----------

Additional study identifiers

ISRCTN number	-
ClinicalTrials.gov id (NCT number)	NCT03570697
WHO universal trial number (UTN)	-

Notes:

Paediatric regulatory details

Is trial part of an agreed paediatric investigation plan (PIP)	No
Does article 45 of REGULATION (EC) No 1901/2006 apply to this trial?	No
Does article 46 of REGULATION (EC) No 1901/2006 apply to this trial?	No

Notes:

Results analysis stage

Analysis stage	Final
Date of interim/final analysis	21 January 2021
Is this the analysis of the primary completion data?	No
Global end of trial reached?	Yes
Global end of trial date	21 January 2021
Was the trial ended prematurely?	No

Notes:

General information about the trial

Main objective of the trial:

To evaluate the effect of evolocumab on fibrous cap thickness (FCT) in subjects with non-ST-elevation acute coronary syndrome (NSTEMI-ACS) who are taking maximally tolerated statin therapy.

Protection of trial subjects:

This study was conducted in accordance with the protocol and with:

- Consensus ethical principles derived from international guidelines including the Declaration of Helsinki and Council for International Organizations of Medical Sciences (CIOMS) International Ethical Guidelines
- Applicable International Council for Harmonisation (ICH) Good Clinical Practice (GCP) Guidelines
- Applicable ICH laws and regulations

The investigator or his/her delegated representative explained to the subject, or his/her legally authorized representative, the aims, methods, anticipated benefits, and potential hazards of the study before any protocol-specific screening procedures or any investigational product(s) were administered, and answered all questions regarding the study.

Background therapy:

High-intensity statin treatment with atorvastatin \geq 40 mg daily or equivalent as background therapy

Investigators up-titrated statin therapy to the maximally tolerated dose, in accordance with local guidelines, prior to randomization.

Evidence for comparator: -

Actual start date of recruitment	19 November 2018
Long term follow-up planned	No
Independent data monitoring committee (IDMC) involvement?	No

Notes:

Population of trial subjects

Subjects enrolled per country

Country: Number of subjects enrolled	Australia: 2
Country: Number of subjects enrolled	Czechia: 10
Country: Number of subjects enrolled	Germany: 6
Country: Number of subjects enrolled	Hungary: 45
Country: Number of subjects enrolled	Italy: 23
Country: Number of subjects enrolled	Netherlands: 78
Worldwide total number of subjects	164
EEA total number of subjects	162

Notes:

Subjects enrolled per age group	
In utero	0
Preterm newborn - gestational age < 37 wk	0
Newborns (0-27 days)	0
Infants and toddlers (28 days-23 months)	0
Children (2-11 years)	0
Adolescents (12-17 years)	0
Adults (18-64 years)	104
From 65 to 84 years	60
85 years and over	0

Subject disposition

Recruitment

Recruitment details:

Participants were enrolled at 23 research centers in Australia (2), Czech Republic (2), Germany (2), Hungary (4), Italy (6), and the Netherlands (7), from November 2018 to December 2019.

Pre-assignment

Screening details:

Participants were randomized 1:1 into 2 treatment groups: evolocumab 420 mg subcutaneously (SC) monthly (QM) or placebo SC QM.

Randomization was stratified by current statin use (> 4 weeks or ≤ 4 weeks) at screening.

Period 1

Period 1 title	Overall Study (overall period)
Is this the baseline period?	Yes
Allocation method	Randomised - controlled
Blinding used	Double blind
Roles blinded	Subject, Investigator, Monitor

Arms

Are arms mutually exclusive?	Yes
Arm title	Placebo

Arm description:

Placebo SC injection QM for 48 weeks. Background maximally tolerated statin therapy for the duration of the study participation.

Arm type	Placebo
Investigational medicinal product name	Placebo
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Solution for injection in cartridge
Routes of administration	Subcutaneous use

Dosage and administration details:

Matching placebo was administered in accordance with instructions in the Investigational Product Instruction Manual (IPIM) and the Information for Use (IFU). The subject (or designee) must have had demonstrated competency, as per site judgment, at administration of SC injections before self-administration was permitted.

Arm title	Evolocumab
------------------	------------

Arm description:

Evolocumab 420 mg SC injection QM for 48 weeks. Background maximally tolerated statin therapy for the duration of the study participation.

Arm type	Experimental
Investigational medicinal product name	Evolocumab
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Solution for injection in cartridge
Routes of administration	Subcutaneous use

Dosage and administration details:

Evolocumab was administered in accordance with instructions in the IPIM and the IFU. The subject (or designee) must have had demonstrated competency, as per site judgment, at administration of SC injections before self-administration was permitted.

Number of subjects in period 1	Placebo	Evolocumab
Started	82	82
Received at least 1 dose of study drug	81	80
Completed	76	79
Not completed	6	3
Adverse event, serious fatal	2	-
Consent withdrawn by subject	4	2
Lost to follow-up	-	1

Adverse events

Adverse events information

Timeframe for reporting adverse events:

Adverse event (AE) reporting period is from the 1st dose of IP up to and including 30 days after the last dose of IP date or the EOS date (Week 52) whichever is earlier.

Adverse event reporting additional description:

Serious adverse events and other adverse events are reported for all participants who received at least one dose of study drug. All-cause mortality is reported for all participants randomized.

Assessment type	Systematic
