Paediatric regulatory details

Is trial part of an agreed paediatric investigation plan (PIP)	No
Does article 45 of REGULATION (EC) No 1901/2006 apply to this trial?	No
Does article 46 of REGULATION (EC) No 1901/2006 apply to this trial?	No

Notes:

Results analysis stage

Analysis stage	Final
Date of interim/final analysis	06 September 2018
Is this the analysis of the primary completion data?	Yes
Primary completion date	06 September 2018
Global end of trial reached?	Yes
Global end of trial date	06 September 2018
Was the trial ended prematurely?	No

Notes:

General information about the trial

Main objective of the trial:

To assess the effectiveness of serlopitant for the treatment of refractory chronic cough after 12 weeks of treatment in reducing 24-hour objective cough frequency.

Secondary objectives were:

To evaluate the effectiveness of serlopitant as compared to placebo after 4 and 8 weeks of treatment in reducing 24-hour objective cough frequency.

To evaluate the effectiveness of serlopitant as compared to placebo after 4, 8, and 12 weeks of treatment in reducing awake objective cough frequency.

To evaluate the effectiveness of serlopitant as compared to placebo after 4, 8, and 12 weeks of treatment in reducing sleep objective cough frequency.

To evaluate the effectiveness of serlopitant in:

Reducing the cough severity measured by a Visual Analog Scale (VAS)

Improving cough-specific quality of life (Leicester Cough Questionnaire)

To assess the safety and tolerability of repeated oral doses of serlopitant in subjects with treatment-refractory chronic cough.

Protection of trial subjects:

Safety was analyzed for all randomized subjects who received at least one dose of study medication. Treatment-emergent adverse events were classified by system organ class and preferred term using the Medical Dictionary for Regulatory Activities (MedDRA) version 20.1 and summarized. Summary statistics were provided for actual values and change from Baseline for clinical laboratory evaluations and vital signs. Shifts from Baseline clinical laboratory values based upon the normal range were tabulated. The observed vital signs and electrocardiogram data and change from Baseline were summarized by visit and treatment group descriptively. Criteria were defined for potentially clinically important findings of vital signs and results were summarized. The count and percentage of subjects with QTc interval corrected by Fredericia's formula (QTcF) > 450, 480, and 500 msec and a change from Baseline of > 30 and 60 msec were summarized by visit and treatment.

Background therapy: -

Evidence for comparator: -

Actual start date of recruitment	03 October 2017
Long term follow-up planned	No
Independent data monitoring committee (IDMC) involvement?	No

Notes:

Population of trial subjects

Subjects enrolled per country

Country: Number of subjects enrolled	United States: 144
Country: Number of subjects enrolled	United Kingdom: 41
Worldwide total number of subjects	185
EEA total number of subjects	41

Notes:

Subjects enrolled per age group	
In utero	0
Preterm newborn - gestational age < 37 wk	0
Newborns (0-27 days)	0
Infants and toddlers (28 days-23 months)	0
Children (2-11 years)	0
Adolescents (12-17 years)	0
Adults (18-64 years)	89
From 65 to 84 years	96
85 years and over	0

Subject disposition

Recruitment

Recruitment details:

Recruitment was started on the 3rd October 2017 and took place in the UK and USA.

Pre-assignment

Screening details:

During the screening period, subjects underwent eligibility evaluation and had their baseline cough monitoring conducted. Subjects must have been willing to comply with restrictions on allowable concomitant therapies for the duration of the study.

Period 1

Period 1 title	Period 1 (overall period)
Is this the baseline period?	Yes
Allocation method	Randomised - controlled
Blinding used	Double blind
Roles blinded	Subject, Investigator, Data analyst, Assessor

Blinding implementation details:

The placebo was formulated to be indistinguishable from the active study product(s). Study materials were packaged and issued in a manner designed to maintain the blind for subjects and all study personnel involved in the direction and execution of study procedures, study assessments, and collection of data.

Arms

Are arms mutually exclusive?	Yes
------------------------------	-----

Arm title	Serlopitant 5 mg
------------------	------------------

Arm description:

Subjects received Serlopitant 5 mg.

Arm type	Active comparator
Investigational medicinal product name	Serlopitant
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Film-coated tablet
Routes of administration	Oral use

Dosage and administration details:

Subjects received daily oral doses of Serlopitant 5 mg for 84 days.

Arm title	Placebo
------------------	---------

Arm description:

Subjects received placebo.

Arm type	Placebo
Investigational medicinal product name	Placebo for Serlopitant
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Film-coated tablet
Routes of administration	Oral use

Dosage and administration details:

Subjects received daily oral doses of Placebo for Serlopitant for 84 days.

Number of subjects in period 1	Serlopitant 5 mg	Placebo
Started	92	93
Completed	81	84
Not completed	11	9
Consent withdrawn by subject	2	3
Adverse event, non-fatal	2	3
Death	1	-
Excluded therapy	-	1
Lack of efficacy	6	2

More information

Substantial protocol amendments (globally)

Were there any global substantial amendments to the protocol? Yes

Date	Amendment
28 August 2017	<p>Version 2.0: Section 5.6 Study drug discontinuation was updated to comply with 21 August 2017 FDA Clinical Information Request.</p> <p>One of the discontinuation criterion were revised so that a subject will be discontinued from study drug if experiencing a National Cancer Institute Common Terminology Criteria for Adverse Events Grade 2 or higher treatment emergent adverse event that is assessed as likely related to study drug.</p> <p>Changed the language from Grade 3 to Grade 2: "The subject experiences a National Cancer Institute Common Terminology Criteria for Adverse Events Grade 2 or higher treatment emergent adverse event that is assessed as likely related to study drug".</p>
08 March 2018	<p>Version 3.0: A secondary endpoint was amended from 'Change from Baseline in 24-hour objective cough frequency at the Follow-Up visit (Day 112)' to 'Change from Baseline and change from Day 84 in 24-hour objective cough frequency at the Follow-Up visit (Day 112)'. This Secondary Efficacy Endpoint was inadvertently omitted in version 2.0 of the protocol. It is important to compare the change in 24-hour objective cough frequency at the end of treatment (Day 84) to the Follow-Up visit (Day 112).</p> <p>The study design was also amended to remove restrictions on food intake when taking the study drug following a recent food effect study with serlopitant (MTI-111) which demonstrated that the increase in C_{max} and AUC_{0-inf} of 28% and 37%, respectively, under fed condition, is not clinically significant. Therefore, serlopitant may be taken with or without food.</p>

Notes:

Interruptions (globally)

Were there any global interruptions to the trial? No

Limitations and caveats

None reported
