Paediatric regulatory details

Is trial part of an agreed paediatric investigation plan (PIP)	No
Does article 45 of REGULATION (EC) No 1901/2006 apply to this trial?	No
Does article 46 of REGULATION (EC) No 1901/2006 apply to this trial?	No

Notes:

Results analysis stage

Analysis stage	Final
Date of interim/final analysis	15 November 2024
Is this the analysis of the primary completion data?	Yes
Primary completion date	23 December 2023
Global end of trial reached?	Yes
Global end of trial date	23 December 2023
Was the trial ended prematurely?	No

Notes:

General information about the trial

Main objective of the trial:

The primary objective was to estimate the 2-year progression-free survival (PFS) achieved with ibrutinib in combination with immunochemotherapy with rituximab, cyclophosphamide, doxorubicin, vincristine, etoposide, and prednisolone (R-CHOEP) in newly diagnosed, younger patients (age 18-60 years) with diffuse large B-cell lymphoma (DLBCL) and age-adjusted International Prognostic Index (aaIPI) 2 or 3.

Protection of trial subjects:

The study was conducted in accordance with the Declaration of Helsinki and the ICH Guidelines in Good Clinical Practice. The study was not started before the competent ethics committee had given a favorable opinion. Written informed consent was obtained from all patients and the study was only conducted as approved by the Ethics committee and the competent authority. Amendments were only implemented after approval.

Background therapy:

The test product ibrutinib was administered in combination with standard immunochemotherapy with rituximab, cyclophosphamide, doxorubicin, vincristine, etoposide, and prednisolone (R-CHOEP).

Evidence for comparator:

A secondary objective for efficacy was to compare patients from this single-arm study with patients from the previous R-MegaCHOEP phase III trial (Schmitz et al., Lancet Oncol 2012).

Actual start date of recruitment	01 June 2018
Long term follow-up planned	No
Independent data monitoring committee (IDMC) involvement?	Yes

Notes:

Population of trial subjects

Subjects enrolled per country

Country: Number of subjects enrolled	Germany: 40
Worldwide total number of subjects	40
EEA total number of subjects	40

Notes:

Subjects enrolled per age group

In utero	0
Preterm newborn - gestational age < 37 wk	0
Newborns (0-27 days)	0
Infants and toddlers (28 days-23 months)	0
Children (2-11 years)	0

Adolescents (12-17 years)	0
Adults (18-64 years)	40
From 65 to 84 years	0
85 years and over	0

Subject disposition

Recruitment

Recruitment details:

40 patients were registered for this study from June 2018 until December 2023 at 9 study sites in Germany.

Pre-assignment

Screening details:

Each patient's eligibility was verified during a screening visit. Informed consent was obtained prior to any clinical procedures that are performed solely for study-related purposes.

Period 1

Period 1 title	overall trial (overall period)
Is this the baseline period?	Yes
Allocation method	Not applicable
Blinding used	Not blinded

Arms

Arm title	Ibrutinib + R-CHOEP
-----------	---------------------

Arm description:

Patients treated with ibrutinib in combination with immunochemotherapy 8 x R-CHOEP.

Arm type	Experimental
Investigational medicinal product name	Ibrutinib
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Capsule, hard
Routes of administration	Oral use

Dosage and administration details:

Ibrutinib was administered at a dose of 560 mg (4 x 140 mg capsules orally once daily) from day 1 to day 112 or max. until day 14 of cycle 8 of R-CHOEP. R-CHOEP was administered every 2 weeks for 8 cycles.

Number of subjects in period 1	Ibrutinib + R-CHOEP
Started	40
Completed	34
Not completed	6
Death due to lymphoma	4
Death due to other reason	1
Death due to salvage therapy following r/r disease	1

Adverse events

Adverse events information

Timeframe for reporting adverse events:

The documentation of adverse events (AEs) started with first study treatment after patient inclusion and ended 100 days after the last application of ibrutinib or any component of R-CHOEP (whichever was applied last).

Adverse event reporting additional description:

In this study, AEs were documented in the eCRF according to predefined categories per therapy cycle. All serious AEs were reported here as serious adverse events (SAEs) and all AEs with CTC grade 3 or higher as non-SAEs.

Assessment type	Systematic

More information

Substantial protocol amendments (globally)

Were there any global substantial amendments to the protocol? Yes

Date	Amendment
06 June 2018	<p>Inclusion criteria of the protocol have been amended: The eligible primary diagnoses for inclusion of the patient were changed according to the new WHO classification of malignant lymphomas (Swerdlow et al., 2016): DLBCL (NOS) or High-grade B-cell Lymphoma with MYC and BCL2 and/or BCL6 rearrangements or High-grade B-cell lymphoma, NOS.</p> <p>In addition, the following was modified in the protocol: Dose modification for the chemotherapy CHOEP was listed in the protocol, SAE reporting was changed.</p>
05 September 2018	The time of administration of ibrutinib was specified in the protocol.
19 June 2019	<p>Safety data from the updated Investigator's brochure of ibrutinib regarding the interaction with other medicinal products (moderate CYP3A inhibitors) was added to the protocol.</p> <p>Prephase treatment was revised in the protocol allowing for prolonging prephase treatment for a maximum of seven days of prednisolone at the investigators discretion and adequate medical reason.</p> <p>Prophylaxis of infections was revised with regard to acyclovir, levofloxacin and the prophylaxis and treatment of fungal infections was addressed in the protocol.</p>
25 March 2020	<p>Safety data from the updated Investigator's brochure of ibrutinib regarding precautions and warnings in case of bleeding-related events, cardiac arrhythmias, lymphocytosis, cerebrovascular accidents and other safety observations were added to the protocol.</p> <p>The handling of complaints regarding the trial medication (Product Quality Complaint (PQC)) was included in the protocol.</p>
30 April 2020	<p>Safety data from the updated Investigator's brochure of ibrutinib regarding precautions and warnings in case of bleeding-related events, leukostasis, hypertension, lymphocytosis, cerebrovascular accidents and other safety observations were added to the protocol.</p> <p>A clarification regarding reporting of pregnancy was added.</p>
12 April 2021	The number of patients in the study was adjusted.
24 August 2021	Safety data from the updated Investigator's brochure of ibrutinib regarding precautions and warnings in case of cardiac arrhythmias and cardiac failure and other safety observations were added to the protocol.
30 June 2022	Administrative changes in the study were implemented in the protocol.

Notes:

Interruptions (globally)

Were there any global interruptions to the trial? No

Limitations and caveats

None reported
