Notes:

Paediatric regulatory details

Is trial part of an agreed paediatric investigation plan (PIP)	No
Does article 45 of REGULATION (EC) No 1901/2006 apply to this trial?	No
Does article 46 of REGULATION (EC) No 1901/2006 apply to this trial?	No

Notes:

Results analysis stage

Analysis stage	Final
Date of interim/final analysis	22 September 2022
Is this the analysis of the primary completion data?	No
Global end of trial reached?	Yes
Global end of trial date	27 September 2021
Was the trial ended prematurely?	No

Notes:

General information about the trial

Main objective of the trial:

The primary objective of this study was to evaluate the efficacy of COMP360 (25 mg and 10 mg) compared to 1 mg, administered under supportive conditions to adult participants with TRD, in improving depressive symptoms, as assessed by the change in the Montgomery-Asberg Depression Rating Scale (MADRS) total score from baseline. Baseline was defined as the assessment score obtained on Day -1. The primary timepoint was Week 3. The MADRS was also analysed for the change from baseline to Day 2, and Weeks 1, 6, 9, and 12.

Protection of trial subjects:

During the screening period, participants who are on antidepressant medications will be expected to complete the taper at least 2 weeks prior to Baseline (V2). Participants will be given a choice of the tapering rate. During the tapering period all participants will be supported by the study clinician. The designated study team member will be in frequent contact with the participants to monitor for withdrawal and worsening of depression symptoms. All participants will be evaluated for safety at the clinic weekly for a minimum of 3 weeks prior to COMP360 administration to ensure safe discontinuation of current antidepressant therapy required by the protocol. Participants' companions (friend or family member) will be educated about the signs of worsening of depression and suicidality, and instructed on ways to contact the study team in case of significant worsening of depression. The COMP360 administration session will be supported by a trained therapist who will be present with the participant at all times until discharge. Rescue medications are allowed during the study as described in the protocol. Efficacy and safety assessments including Adverse Events are performed throughout the study up to the end of study.

Background therapy: -

Evidence for comparator: -

Actual start date of recruitment	03 January 2019
Long term follow-up planned	Yes
Long term follow-up rationale	Safety, Efficacy
Long term follow-up duration	1 Years
Independent data monitoring committee (IDMC) involvement?	Yes

Notes:

Population of trial subjects

Subjects enrolled per country

Country: Number of subjects enrolled	Canada: 6
Country: Number of subjects enrolled	United States: 96
Country: Number of subjects enrolled	Netherlands: 50
Country: Number of subjects enrolled	Portugal: 2
Country: Number of subjects enrolled	Spain: 16
Country: Number of subjects enrolled	United Kingdom: 33
Country: Number of subjects enrolled	Czechia: 7
Country: Number of subjects enrolled	Denmark: 8

Country: Number of subjects enrolled	Germany: 4
Country: Number of subjects enrolled	Ireland: 11
Worldwide total number of subjects	233
EEA total number of subjects	98

Notes:

Subjects enrolled per age group	
In utero	0
Preterm newborn - gestational age < 37 wk	0
Newborns (0-27 days)	0
Infants and toddlers (28 days-23 months)	0
Children (2-11 years)	0
Adolescents (12-17 years)	0
Adults (18-64 years)	226
From 65 to 84 years	7
85 years and over	0

Subject disposition

Recruitment

Recruitment details: -

Pre-assignment

Screening details:

Participants were outpatients recruited from general practitioners and specialised psychiatric services. All participants were then seen weekly for at least 3 weeks prior to the COMP360 Session (V3) to ensure the safe discontinuation of current antidepressant therapy. Rescreening of participants considered not eligible was allowed.

Pre-assignment period milestones

Number of subjects started	428 ^[1]
Number of subjects completed	233

Pre-assignment subject non-completion reasons

Reason: Number of subjects	Inclusion/exclusion criteria: 156
Reason: Number of subjects	Lost to follow-up: 1
Reason: Number of subjects	Not specified: 38

Notes:

[1] - The number of subjects reported to have started the pre-assignment period are not the same as the worldwide number enrolled in the trial. It is expected that these numbers will be the same.

Justification: The number of patients listed as started is the number of patients screened, whereas the number of patients enrolled is the number of patients who were randomized.

Period 1

Period 1 title	Overall trial (overall period)
Is this the baseline period?	Yes
Allocation method	Randomised - controlled
Blinding used	Double blind
Roles blinded	Subject, Investigator, Assessor

Blinding implementation details:

Bottles (each containing 5 capsules for a single dose administration) for each participant will be assigned according to unique identifiers by IWRS programmed with blind-breaking instructions. Study assessments were performed by investigators who were blinded to treatment assignment.

Arms

Are arms mutually exclusive?	Yes
Arm title	COMP360 25mg
Arm description: -	
Arm type	Experimental
Investigational medicinal product name	COMP360
Investigational medicinal product code	
Other name	Psilocybin
Pharmaceutical forms	Capsule
Routes of administration	Oral use

Dosage and administration details:

COMP360 25mg single dose treatment: 5 × 5 mg capsules

Arm title	COMP360 10mg
Arm description: -	
Arm type	Experimental

Investigational medicinal product name	COMP360
Investigational medicinal product code	
Other name	Psilocybin
Pharmaceutical forms	Capsule
Routes of administration	Oral use

Dosage and administration details:

COMP360 10mg single dose treatment: 2 × 5 mg capsules and 3 × placebo capsules

Arm title	COMP360 1mg

Adverse events

Adverse events information

Timeframe for reporting adverse events:

From ICG sign-off to last study event

Adverse event reporting additional description:

Any AEs occurring before the start of treatment (ie, before the dose of the IP on Day 0 [V3]) was recorded in the medical history. Any AE ongoing at V10 (EOS/ET) was followed until resolution or no longer considered clinically significant by the investigator.

Assessment type	Non-systematic
